Unity College is accredited by the New England Association of Schools and Colleges, Inc.
We at Unity College recognize that we are custodians of a fragile planet. Our education is a unique combination of the traditional liberal arts with an emphasis on natural resource management, intended to prepare graduates for responsible stewardship of the earth. Such an education must be an empowering process: in-depth study prepares graduates to address specific environmental issues, while a broad liberal arts base enables them to anticipate and deal creatively with issues yet unimagined. A liberal arts education with an environmental focus must go beyond the limits of the classroom walls; thus, Unity College combines academic rigor with equally demanding field experience.

We are citizens of the world. To prepare for that role, the foundation of a Unity College education is its liberal arts core: all degree programs require that approximately one-third of their courses be chosen from this core. The fine arts, the history of events and ideas, a background in ethics, an exposure to other cultures, an understanding of what makes us human as well as the ability to think critically and creatively are tools to open our minds and enhance the quality of our lives.

On this broad liberal arts base, Unity College students build specialization in their chosen fields. This may begin as early as the entering year, when students are introduced to subjects in their major area of study. Experiential learning is an important component of the educational process; field work requires students to take theoretical knowledge from classroom settings and find practical applications in the ecology of Maine. This integration of academic preparation and hands-on experience not only ensures that graduates have mastery in their area of expertise, but enables them to apply local concepts to a broader arena.

Basic to Unity College’s philosophy is its continuing commitment to student’s success. This commitment is manifested in a variety of ways, one being the close personal relationship between faculty and students, facilitated by small classes, close advising, and easy access to instructors. Unity College will not outgrow its reputation for care and concern. Another example of the College’s commitment to success is its innovative Learning Resource Center, which offers support not only to the learning disabled, but to all students. Individual attention is available from both professional staff and peer tutors. Additionally, ongoing career counseling, innovative curricula that address student’s needs, and cooperative education programs that provide on-the-job experience all facilitate entry into the world of work. Unity College supports its students from orientation through graduation and beyond.

We at Unity College intend to graduate individuals with firm values, a sense of purpose, and an appreciation of the web of life. They are professionally effective and environmentally responsive, recognizing their responsibilities as passengers on this fragile planet. They understand that as global citizens, they must assume a leadership role in the stewardship of the earth.
Student Affairs

The Student Affairs Office provides programs and services in the areas of residential life, social and cultural activities, dining services, health and wellness, intercollegiate athletics, and recreational sports designed to help students achieve maturity in self-image, in relationships with others, and in their ability to deal with life’s challenges. Below is a brief outline of the Student Affairs services at Unity College. For more detailed information, please, refer to the Student Handbook.

Residence Life
The Office of Residence Life offers students the opportunity to be on campus in a dynamic, challenging and educational environment. While in residence, students have the convenience of easy access to the library, classrooms, recreational facilities, leadership opportunities and educational programs that take place in the residences. Social activity, both planned and spontaneous, frequently begins in the halls. Some students believe that their strongest interpersonal relationships are initiated in the halls.

Athletics
Unity College is a member of the United States Collegiate Athletic Association (USCAA), and the Yankee Small College Conference (YSCC). Unity College offers seven varsity intercollegiate sports: men’s soccer, basketball, cross-country and women’s volleyball, basketball, soccer and cross-country. In addition, Unity sponsors various intercollegiate club sports. Woodsmen, ice hockey, ultimate Frisbee, bowling, and women’s softball teams compete with other college clubs throughout New England.

- **Equity in Athletics Disclosure Report** - Each year on October 1, the college makes available the Equity in Athletics Disclosure report to students, potential students, and the public. This report may be reviewed upon request in the Registrar’s Office.

Dining
Unity College Dining Services is a self-operated food service program with a goal to provide high-quality food, a friendly atmosphere, and excellent customer service while supporting local and sustainable practices. In our dining hall located in Wyman Commons, we offer an array of dining options ranging from self-serve buffet to cook-to-order stations with a repertoire of various cuisines. Retail dining and meal exchanges are available at our Student Center facility.

We offer the following on-campus meal plans: 19 meals a week for first-year students and 13 meals for upper-class students. These meal plans incorporate a declining balance that can be used at the Student Center or downtown in two restaurant locations. We also offer a meal plan for off-campus and cottage/TerraHaus residents or any student not required to be on one of our standard meal plans. This new plan is called the “Bundle Plan.” It offers 60 meal swipes in either the Student Center or Dining Commons. The cost of the plan is $400. Meals must be used by the end of each semester. The first meal of each semester begins with the Sunday dinner meal of the first week of classes and ends with the dinner meal on Wednesday of finals week.

The Student Center is Dining Services’ retail operation where students can purchase food and sundries. Meal plan dining dollars and meal exchanges can also be used here as well as Unity Dollars.

Student Health and Counseling
The Health Center provides a wide range of services including daily walk-in clinics, a weekly physician clinic, a monthly reproductive health clinic, individual counseling, and health education on an individual basis.

- **Religious Resources** - Unity College seeks to respond to a variety of religious traditions and encourages independent religion involvement on a part of its students. There are Catholic, Islamic, Jewish and Protestant services available in and around Unity. Area ministers are available for spiritual and personal counseling.
Public Safety
The Public Safety Department is responsible for providing a comprehensive program of police, security, crime prevention, fire safety, emergency medical, parking, and related public safety services on a 24-hour basis. To further meet this objective, the Department of Public Safety works toward the establishment of a partnership with students, staff, and faculty in the development of crime prevention, security assessment, response, and education. This partnership is the foundation of maintaining an environment which encourages mutual respect, caring, and safety for the campus community.

Public Safety maintains a working relationship with Waldo County Sheriff, Maine State Police, Unity Fire Department, and Unity Ambulance to ensure an immediate response in the event additional assistance is required to ensure the safety of students, faculty, staff, and visitors and to protect the property and facilities. Public safety officers are trained to assist, when necessary, the Emergency Response Team.

Federal regulations require the reporting of crime statistics each year by September 1. The Public Safety Report is available on the college website at www.unity.edu. A printed copy of this report is available to anyone, at no cost, by contacting the Unity College Public Safety Office.

Student Activities
Student activities provide a diverse offering of events for the participation and enjoyment of students. These program opportunities are geared to expand students’ academic experience and facilitate their social connection with the community around them. A quick look at the monthly calendar will reveal that there is plenty going on at Unity College, such as, entertainers, lectures, trips, parties, and dances. The student activities director and staff of work study students provide a variety of social, cultural and, educational programs throughout the school year. Students are strongly encouraged to recommend, help organize, and participate in student activities events.

Student Government
The Student Government Association is an active, highly respected, and influential voice on campus that helps to organize rewarding activities and non-academic programs. Funded by the student activity fee, the Student Government Association distributes funds each semester to the various student projects, activities, clubs, and organizations.

Unity College’s Student Government Association is made up of a president, vice-president, secretary, treasurer, two senior class representatives, two junior class representatives, two sophomore class representatives, two incoming class representatives, one commuter representative and one residence representative. The student government president is also the student representative to the Board of Trustees of the College. Many college committees include student representatives, who may be appointed by the student government president with the approval of the Student Government Association. In addition to these committees, the Student Government Association forms its own committees to take action and make recommendations on issues related to the well-being of the Unity College community.
Academic Information

Academic Program
Unity College prepares students for world citizenship and environmental stewardship. The Unity College education includes broad-based general learning as well as in-depth professional training. Unity graduates leave with well-developed skills in writing, speaking, mathematics, and computer science; with breadth and depth in areas of general knowledge and environmental issues; with mature, independent thinking skills; and with an appreciation of our cultural heritage.

Academic Advising
Your academic advisor is important as a guide, a mentor, and a partner. Your advisor helps you to plan your academic program, select courses, consider internships and off-campus study, and get the most out of your college career.

When you enroll, you will be assigned to an academic advisor who is both interested and skilled in helping new students make the adjustment to Unity College. In addition to your advisor, there are others to help you plan your academic coursework-faculty experts in your degree program, the Learning Resource Center, and upper-class students who serve as peer advisors.

During your first semester at Unity, you will choose a new advisor, a faculty member you’ve had a chance to get to know with expertise and experience in your area of concentration. To change to a new advisor, simply arrange for your selected faculty member to be your new advisor and fill out a change of advisor form, which is available from the Registrar’s Office. Your initial advisor will also help with this transition process.

Bookstore
Visit Bookstore
The bookstore is conveniently located adjacent to Wyman Commons. In addition to textbooks and school supplies, you can purchase snack foods and drinks, general interest books, computer supplies, and Unity College memorabilia. Campus community members can also post mail and packages via USPS, UPS and FedEx from the bookstore.

Calendar, Academic
Visit Academic Calendar
The calendar is composed of two 15-week sessions, followed by a three-week session in May. Students may or may not choose to take courses in the three-week session, but some courses which are required for some programs might be offered only then. The drop period for May session will be during the first two days of classes in that session.

Career Resource Center
Visit Career Resource Center
The Career Resource Center (CRC) educates students about career development, coordinates all credit-bearing internships and provides resources for studying abroad and graduate school. The career development process begins when a student enrolls at Unity College. The CRC offers services to assist students in evaluating their own interests and abilities as well as opportunities to increase their awareness of career fields.

Dorothy Webb Quimby Library
Visit Library
The library houses a collection of more than 50,000 titles in a variety of formats, including e-books and digitized local materials, which are selected primarily to support the college’s curriculum. In addition, the library provides access to hundreds of scholarly and special-interest journals and research databases, along with providing access to multimedia equipment such as camcorders, GPS units, projectors and lap tops. Quimby library is a member of several consortia: Minerva (Maine InfoNet); Neln; OCLC; the Maine Download Library; and WALDO (Westchester Academic Library Directors Organization), providing the library with substantial interlibrary loan capabilities and purchasing options. Small general fiction and children’s collections are also provided for use by the campus and local communities, along with public-use computers.
The Learning Resource Center (LRC) is an academic center that offers general academic support to the entire student body and specialized support, including academic course accommodations to the students who are diagnosed with learning disabilities, ADHD or similar challenges. The staff of the LRC includes faculty members, a professional learning specialist, and trained peer tutors.

The Center offers services designed to promote skill improvement and individual development. Academic skill improvement is addressed through tutorial assistance and instruction in time management and other study skills. Most students who take advantage of the support offered by the LRC to improve their study habits, develop more effective learning strategies, and succeed in their coursework.

- The LRC offers the following programs:

**Assistive Technology**
The LRC has assistive technology available for students with learning differences to help with reading, writing, and organizational skills. Assistive technology available in the LRC includes Kurzweil 3000 and Dragon Naturally Speaking. Assistive technology can help students with learning differences become more successful readers and writers and can bridge the gap between their reading and writing needs and their current skills. Assistance and training are available for students to learn to use the technology.

**Services for Students with Learning Disabilities and ADHD**
The LRC’s Learning Specialist works with the students who have specific learning disabilities or ADHD, providing individual instruction and counseling on organizational skills. The Learning Specialist works collaboratively with eligible students to orient them to the College’s support services. The Learning Specialist also coordinates appropriate accommodations with faculty concerning specific student needs and course accommodations.

**Study Skills Workshops**
Periodically, the Learning Resource Center conducts workshops designed to help students develop better techniques for taking notes in class, listening to and remembering classroom material, reading textbooks, and taking examinations.

**Tutoring**
Faculty members and trained peer tutors are available in the Learning Resource Center to help students with their coursework. Tutors assist students in completing assignments, studying, understanding concepts, and developing improved study skills.

**Writing Center**
The Writing Center is an academic support service for all members of the Unity College community. Its staff includes the director and peer writing tutors. The director also acts as a resource to faculty and staff in the written aspects of their work. In addition, The Writing Center sponsors activities to promote writing within the campus community.
Special Programs and Partnerships

The Washington Center
Unity College is affiliated with the Washington Center, a living-learning laboratory in the heart of Washington, D.C. The program provides individually tailored, full-time, supervised work experience. It also contains weekly academic seminars in a subject of choice. Programs are designed to show what life in a chosen career field is like and to update students on the changes and innovations taking place in the field.

Participants tend to be highly motivated people from a wide range of backgrounds and interests who want to focus on career skills and options.

Students live in apartment settings, work on the job 35 hours a week, and attend a weekly academic seminar. A cultural program and a lecture program are included. The program is intense and demanding but will help students build a solid foundation for their professional future. There is a program fee and room charge paid directly to the Washington Center in addition to tuition paid to Unity College, but the cost is comparable to a semester on campus. The tuition costs are 50% of the normal Internship rate per credit hour. For the 2013-2014 academic year, the cost will be $245.00 per credit.

Students should have a B average and junior standing in order to qualify. Spirit, tenacity, the desire to learn, and the willingness to put in long hours will compensate for academic shortcomings in some cases. Students will be required to complete a public presentation on campus upon completion of the Washington Center program.

Washington’s energy and openness make it a rich resource for students of all interests. Indeed, the city is often called the intern capital of the United States. Hundreds of sponsors seek out Washington Center interns each year; whatever your career aspirations, the center will tailor an internship placement for you.

Areas of current interest for the Washington Center include:

Unity College/Chatham University
Unity College has an articulation agreement with Chatham’s School of Sustainability and the Environment (SSE). This agreement covers students from Unity College seeking to gain entry to the Master of Sustainability program of Chatham’s SSE. Chatham University will guarantee an interview from the Master of Sustainability program for each qualified applicant from Unity College. Each qualified applicant must have a cumulative GPA of at least 3.3 and submit all application materials before the January deadline. Admissions materials include: three letters of recommendation from faculty or direct work supervisors; a one- to two-page letter explaining the motivation to join a trans-disciplinary sustainability program; a copy of their most recent transcript; and a completed application form.

Unity College/Clarkson University
Unity College has articulation agreements in conjunction with Clarkson University’s Bachelor of Science Environmental Engineering, Master of Science in Environmental Science and Engineering, and Master of Science in Environmental Politics and Governance programs. Students must have a minimum grade point average of 3.25 and meet program specific provisions to be considered for acceptance into Clarkson University in conjunction with the Articulation Agreements. For more information, students are welcome to contact the Unity College Registrar’s Office.
Unity College/Husson University Partnership

Unity College has an agreement with Husson University to permit students accelerated progress towards either a Master of Business Administration degree or a Master of Science in Criminal Justice Administration degree. Students earn the BA or BS from Unity at the end of the fourth year and the MBA or MSCJA from Husson at the end of the fifth year. Graduate course work begins in the fourth year on the Unity campus with one graduate course in the fall term and one in the spring term. A six credit internship or course work is completed during the summer at Husson University between fourth and fifth years. In the fifth year, students take graduate course work on the Husson campus or at the Husson South Portland Center.

The two courses taken at Unity College must be from the list of designated 4000-level courses. The student must meet the general requirements in the 4000-level course and complete a project that represents beginning graduate level work. The specific project requirements will be established by the course instructor and will include at a minimum a research paper, presentation, or similar product of substance and quality.

Unity College students interested in completing a master’s degree in this five-year program will apply for admission to either the Husson University Masters in Business Administration program or the MS in Criminal Justice Administration program in the second semester of their junior year. The admission requirements include: a completed application, two letters of recommendation, and submission of transcripts (with student consent) for all undergraduate course work completed to date. It is expected that candidates will have an undergraduate GPA of a 3.0 or better; exceptions to this standard may be made on a case-by-case-basis. Initial acceptance into the graduate program will be provisional.

Students must complete the two graduate level courses in their senior year with grades of B or better and maintain an overall GPA of 3.0 or better. Upon completion of their undergraduate program of study and award of the baccalaureate degree, students will be admitted to regular status in the Master of Business Administration or the M.S. in Criminal Justice Administration program.

Unity College/ME Organic Farmers and Gardeners Assoc. Sustainable Agriculture Program

This unique program offers a thorough introduction to sustainable agriculture in theory and practice. A fall semester practicum course provides a foundation in sustainable agriculture through visits to premier sustainable farms, classroom instruction, hands-on laboratory work in the college gardens and greenhouses, and seminars with visiting farmers. The internship offers college credit for a summer farm work experience mentored by a MOFGA farm expert in both sustainable agriculture practice and education.

Unity College/National Outdoor Leadership School

Unity College has an articulation agreement with the National Outdoor Leadership School (NOLS) whereby NOLS courses may be transferred for academic credit providing the student receives academic credit through another college or university. Unity College and the National Outdoor Leadership School, Lander, Wyoming exists to provide education services and opportunities. We cooperate effectively to ensure the highest quality educational experiences and opportunities. NOLS courses are a valuable way to learn outdoor skills and develop leadership. NOLS will give Unity College students preference in admission and intern selection.

Students must register with the Unity College Registrar’s Office prior to attending the National Outdoor Leadership School to receive course credit.

Unity College/Vermont Law School

Unity College has an articulation agreement with Vermont’s Law School for students interested in pursuing their Juris Doctor (JD), Master of Environmental Law Policy (MELP) or Joint JD/MELP. Unity students interested in attending Vermont Law School must meet certain criteria including: completing all requirements for Unity bachelor’s degree program; must have completed a minimum of 60 credits towards a bachelor’s degree in residence at Unity College; have minimum grade point averages that meet or exceeds the average GPA of the first-year JD or MELP class in residence at Vermont Law School at the time of the student’s application; have a current LSAT score that meets or exceeds the average LSAT score of the first-year JD class in residence at Vermont Law School at the time of application (LSAT scores are not needed for MELP applicants); two positive letters from Unity faculty recommending the student; and there must be no evidence
of character or fitness concerns that would generally disqualify the applicant from admission into Vermont Law School.

**High School Articulations**

High school graduates from the following programs may be eligible for six college credits upon matriculation to Unity College. Students must have graduated from their high school program with a grade point average of 3.0. The overall high school grade point average must be a minimum of 2.0. For more information you may contact the Unity College Registrar’s Office.

*Unity College has articulation agreements with the following high schools:*

- Lyman Hall High School, Wallingford, Connecticut (Wildlife Biology Program)
- Middletown Regional Vocational Agriculture Center, Middletown, Connecticut (Natural Resources Program)
- Norfolk County Agricultural High School, Walpole, Massachusetts (Animal and Marine Science Program and Plant and Environmental Science Program)
- Nonnewaug High School, Woodbury, Connecticut (Conservation Program)
- Pinkerton Academy, Derry, New Hampshire (Environmental Studies/Outdoor Skills and Forestry Technology Programs)
- Stafford Technical Center, Rutland, Vermont (Forestry and Natural Resource Program)
- Womago Regional High School, Litchfield, Connecticut (Natural Resources Program)

**College Articulations**

- Bristol Community College, Fall River, Massachusetts
  - AA, Environmental Science
- Hocking College, Nelsonville, Ohio
  - AAS, Fish Management and Aquaculture Sciences
  - AAS, Wildlife Sciences

**College Cross-Registration Agreement/Thomas College**

Unity College offers a cross-registration program with Thomas College in Waterville, Maine for the purpose of expanding the each institution’s academic offerings. Juniors and seniors who are full time degree-seeking students at Unity College may register for one course on a space-available basis and with the approval of the Thomas College registrar. Students selecting a cross-registration course pay their Unity College tuition and owe no additional tuition to the other college. However, the student must pay for books, supplies, transportation and other fees incurred as a result of taking a cross-registration course. For more information, contact the registrar at Unity College.
Major Fields of Study

Unity College offers degrees in the following academic majors:

**Associate Programs**
Associate of Arts  
Liberal Studies

Associate of Science  
Environmental Science

**Baccalaureate Programs**
Bachelor of Arts  
Art and Environment  
Environmental Writing and Media Studies

Bachelor of Science  
Adventure-Based Environmental Education  
Adventure Therapy  
Biology  
Captive Wildlife Care and Education  
Conservation Law Enforcement  
Earth and Environmental Science  
Environmental Policy, Law, and Society  
Marine Biology  
Parks and Forest Resources  
Secondary Education: Life Science  
Secondary Education: Physical Science  
Sustainable Agriculture  
Sustainable Energy Management  
Wildlife Biology  
Wildlife and Fisheries Management

All bachelor’s degree major fields of study are comprised of the following components:
- Unity College Environmental Citizen Curriculum
- Major Requirements
- General Degree Requirements
  - A minimum of 120 credit hours
  - Thirty hours taken in residence
  - Thirty credits at the 3000 level or above
  - All degree candidates must have an overall GPA of 2.0 or above and be in good standing
Unity College Environmental Citizen Curriculum

The Unity College Environmental Citizen Curriculum, a primary component of the Unity education, engages students in real world problem-solving using the framework of sustainability science. This trans-disciplinary curriculum, integral to all baccalaureate degrees, connects academic skills and disciplinary tools to hands-on experience. Students graduate prepared for leadership in a wide range of careers and environmental issues.

Program courses can be used to fulfill any Environmental Citizen requirement with the exception of the Environmental Studies course. Any given course can only fulfill one of the Environmental Citizen requirements, with the exception of the Community-based Learning requirement. A single course can fulfill both the Community-based Learning requirement and another Environmental Citizen requirement. Each course or group of courses used to fulfill an Environmental Citizen requirement must total a minimum of three credits with the exception of the Community-based Learning, which must total a minimum of two credits.

I. Foundation Courses:
- CM 1003 Composition and Communication I
- CM 1013 Composition and Communication II
- A Mathematics course
- A Life Science course
- A Physical Science course
- A Humanities course
- A Social Science course
- An Arts course
- An internship, academic field experience, or thesis
- A Community-based Learning course
- Passing grade on a computer applications proficiency exam or LR 1222 Intro. to Computer Applications

II. Keystone Courses:
- IC 1113 The Unity Experience or IC 1111 The Unity Transfer Experience
- IC 2223 Environmental Issues and Insights
- Environmental Studies course (minimum of 3 credits)
- IC 3413 Environmental Scenarios and Solutions

The courses below fulfill the Environmental Citizen Foundation and Keystone requirements:

Math courses: Courses with a course code of MA
Physical Science courses: Courses with a course code of CH, GL, PS (the course that fulfills this requirement must have a lab component)
Life Science courses: Courses with a course code of BI (the course that fulfills this requirement must have a lab component)
Social Science courses: Courses with a course code of AN, EC, GY, PL, PY, SY
Humanities courses: Courses with a course code of CM (except CM 1003, CM 1013, CM 2013, CM 2233, CM 3113), EH (except EH 3213), GS 1023, HU
Art courses: Courses with a course code of AR, CM 3113
Environmental Studies courses:
- AN 2113 Society and Sustainability
- BI 3063 Agroecology
- BI 3323 Conservation Biology
- BI 4423 Ecosystem Ecology
- CH 4044 Environmental Chemistry
- CM 2123 Environmental Communication
- EC 2003 Economics of Resource Conservation and Sustainability
- GL 2003 Geology of Environmental Problems
- HU 3113 Global Environmental History
- PL 3013 Issues in Food and Agriculture
- PL 3413 Environmental Advocacy
- PL 4413 Natural Resource Policy

Unity College Catalog 2013-2014
Community-based learning: is experiential learning that engages students in service opportunities within the community as an integral part of a course. It allows students the opportunity to apply classroom learning to real-life situations, which enriches the learning experience, teaches civic responsibility, and produces positive benefits for the greater community. The following courses fulfill the Community-based learning requirement:

AE 1003  Experiential Learning Initiatives  
AF 3324  Fisheries Science and Techniques  
AS 4333  Administration and Organization  
CH 4044  Environmental Chemistry  
CM 2123  Environmental Communication  
CM 3123  New Media  
ED 3342  Exceptional and Universal Programs  
ED 3443  Teaching Science-Secondary Schools  
ES 3213  Applied GIS  
FY 3213  Forest Silviculture and Management  
GL 3524  Lake Sedimentation  
HU 2123  Spanish II  
IC 2213  Community Applications  
PL 3413  Environmental Advocacy  
PR 3213  Visitor & Resource Protection  
PR 4123  Interpretive Methods  
PR 4223  Park & Forest Resource Plan  
WF 2003  Animal Training  
WF 4013  Wildlife Conservation Capstone

Internship
An internship is a carefully planned, well-supervised job experience related to an academic field. This can include comprehensive research such as NSF Research Experiences for Undergraduates (REUs). To fulfill the Unity College Environmental Citizen requirement, the internship must be a minimum of three credits and be at the 3000 level or above. Completion of Professional Development, AS 2111, before registering for an internship is recommended. Students should plan to take their internship no later than the summer of their junior year in order to complete their degree requirements in the appropriate time.

Thesis
A thesis is an independent project completed in the student’s senior year. The thesis presents a significant body of original work. The thesis will be presented publicly and a copy deposited in the Dorothy Webb Quimby Library.

The topic and methodology of a thesis are decided between the student and two faculty thesis advisors. A written thesis proposal must be approved by the faculty administrator and filed with the registrar. The thesis may be taken at the 4000 level only, for a maximum of three credits per semester, for each of two semesters.

Academic Field Experience
A field experience will include at least three credits of academic course study at the 3000 level or above, conducted over a period of at least three calendar weeks at a college/university research station. Field experiences must be pre-approved by the Unity College Internship Committee. Transfer credits associated with academic field experiences must be approved by the registrar and come from an accredited institution of higher learning.
Degree Programs

Liberal Studies Associate of Arts

The Associate of Arts degree, emphasis in Liberal Studies, provides the greatest possible choice to the student in the design of his/her academic program. This degree program provides exposure in the traditional liberal arts. A student may concentrate heavily in one academic discipline, or he/she may design a program with considerable breadth in course selection. The Associate of Arts degree is designed to facilitate entry into a baccalaureate degree program.

I. A minimum of 60 credit hours, of which at least 30 must be earned in residence at the College.

II. The Unity Environmental Citizen Curriculum Requirements:
   IC 1113 The Unity Experience or IC 1111 The Unity Transfer Experience
   IC 2223 Environmental Issues and Insights
   CM 1003 Composition and Communication I
   CM 1013 Composition and Communication II
   One Mathematics course
   One Life Science course
   One Physical Science course
   Pass computer proficiency exam or LR1222 Introduction to Computer Applications

   One course each from two of the following categories:
   An Arts course
   A Humanities course
   A Social Science course

III. A minimum of 24 credit hours must be earned at the 2000 level or above.

IV. All degree candidates must have an overall GPA of 2.0 and be in good standing.
Environmental Science Associate of Science

The Associate of Science degree is a two-year program that offers a general foundation in the environmental sciences. It is designed to provide basic skills and allow for the exploration of the varied fields in the natural resources. The two years needed to complete the degree provide the experience necessary for further specialization in a specific environmental science through continuation in the baccalaureate degree program.

I. A minimum of 60 credit hours, of which at least 30 must be earned in residence at the college.

II. The Unity Environmental Citizen Curriculum Requirements:

   IC 1113 The Unity Experience or IC 1111 The Unity Transfer Experience
   IC 2223 Environmental Issues and Insights
   CM 1003 Composition and Communication I
   CM 1013 Composition and Communication II
   One Mathematics course
   One Life Science course
   One Physical Science course
   Pass computer proficiency exam or LR1222 Introduction to Computer Applications

   One course each from two of the following categories:
   An Arts course
   A Humanities course
   A Social Science course

   Complete 36 credit hours from courses listed under the following course codes:
   AF, BI, CH, CL, ES, FY, GL, MA, PS, SA, WF.

III. A minimum of 24 credit hours must be earned at the 2000 level or above.

IV. All degree candidates must have an overall GPA of 2.0 and be in good standing.
Center for Biodiversity

Loss of biodiversity affects our food sources, our medicines, our ability to combat disease, our raw materials for industry, and our overall sense of being. Here at the Center for Biodiversity, our focus is on the study and preservation of biodiversity in all types of habitats – marine, terrestrial, and freshwater. We prepare students to effectively address issues of biodiversity by providing essential scientific knowledge of the physical and life sciences.

MAJORS
Biology
Marine Biology
Center for Biodiversity Learning Outcomes

Graduates of the B.S. in Biology will be able to:

1. Understand and articulate central ideas and foundational assumptions of evolution and ecology.
2. Understand and explain the fundamental processes of cellular and organismal biology.
3. Integrate and properly cite primary scientific literature in a written document.
4. Be proficient with microscopy and other appropriate lab and field techniques.
5. Complete a scientific research experience, including hypothesis development, experimental design, data collection and analysis, and communicate results in the appropriate scientific style.

Graduates of the B.S. in Marine Biology will be able to:

1. Characterize the phylogenetic, morphological, and physiological diversity of marine organisms, from microbes to marine mammals.
2. Understand and explain how concepts of ecology and evolution apply to marine organisms and habitats.
3. Integrate and properly cite primary scientific literature in a written document.
4. Be proficient with SCUBA, microscopy, and other appropriate lab and field techniques.
5. Complete a marine scientific research experience, including hypothesis development, experimental design, data collection and analysis, and communicate results in the appropriate scientific style.
The Biology program provides opportunities for students who are fascinated with living organisms to develop their passion. All Biology majors gain a foundational knowledge of cellular, organismal, and ecological aspects of biology that are necessary for any type of biologist. The Biology program then allows students to specialize in an area that most interests them by selecting either the Organismal or Ecological option and choosing courses within their option to meet their needs. In addition to the knowledge of cells, organisms, populations, and ecosystems, the Biology program prepares students to be professionals through practice with lab and field skills, use of the scientific process, and scientific communication. Biology graduates are ready to take on issues of biodiversity loss, habitat degradation, invasive species, and global change and can become foresters, zoologists, botanists, conservation biologists, educators, environmental consultants, fisheries biologists, ecologists, park rangers, game wardens, science writers, and more. Students wishing to pursue graduate studies should consider completing the Graduate School Core for Biological Sciences in addition to their Biology curriculum.

- A minimum of 30 credit hours earned at Unity College
- 30 credits at the 3000 level or above
- An overall cumulative GPA of 2.0 or above
**Marine Biology Bachelor of Science**

The Marine Biology program provides dedicated, engaged students with specialized knowledge of marine organisms and marine ecosystems. Marine Biology majors gain a solid foundation in the biological sciences while specializing in the unique characteristics of marine life. Students of this program are prepared to be professional biologists ready to take on the issues of biodiversity loss, overexploitation of marine resources, marine habitat loss and degradation, invasive species, and other issues in need of passionate leaders educated in the science of marine biology. Graduates are prepared to enter marine or other biological careers and may work for aquariums, conservation organizations, government agencies, or researchers as field or lab technicians, or they may go on to graduate school to pursue their own research areas. Students wishing to pursue graduate studies in marine biology should consider completing the Graduate School Core for Biological Sciences in addition to the Marine Biology curriculum.

Unity College Catalog 2013-2014
Center for Environmental Arts and Humanities

Capturing the attention of the public through strong and effective art and writing can change the world. Our students are the writers and artists who hold a vision of what could be. They are committed to deep reading, thoughtful writing, visionary artistry, and creative imagination allowing them to play an essential role in shaping the future of the planet.

MAJORS
Art and Environment
Environmental Writing and Media Studies
Center for Environmental Arts and Humanities Learning Outcomes

Graduates in the B.S. in Environmental Writing and Media Studies will be able to...

1. Demonstrate proficiency in the craft of writing: a. genres, b. audience, c. modes
2. Demonstrate ability to think critically about texts: a. critique, b. analyze, c. assess, d. interpret
3. Demonstrate ability to engage readers in environmental issues
4. Demonstrate the ability to navigate new and emerging media and publication venues
5. Understand contemporary environmental issues

Graduates in the B.S. in Art and Environmental will be able to...

1. Demonstrate authenticity as an artist from their first year: a. understanding, making, and critiquing art, b. participating in the real arts world, c. building networks and community, d. promoting their own work.
2. Demonstrate a grounding in environmental sciences: a. knowledge, b. methods, c. public environmental issues.
3. Demonstrate ability for critical thinking: a. conceptual rigor, b. flexibility, c. questioning assumptions, d. making value-judgments, e. executing concepts, f. problem-solving, g. fluency in shifting between scientific and artistic ways of knowing, h. finding new solutions
4. Demonstrate fluency in media languages: a. traditional, b. contemporary, c. emerging
5. Demonstrate insight about the world and its issues: a. authentic, b. personal, c. well-crafted
6. Demonstrate preparedness to participate in the larger arts world and the greater community through a. education and b. advocacy.
Art and Environment Bachelor of Arts
The B.A. in Art and Environment program prepares graduates to be authentic artists who literally change the way people see environmental issues. From climate change to biodiversity loss, from personal sustainability to environmental justice, Art and Environment majors present their vision of what is possible and inspire action. Unlike any other art program, Art and Environment integrates environmental studies and sciences, studio and applied arts, and media. Through their grasp of environmental issues, their solid scientific education, and their ability to create, communicate, and inspire, Art and Environment graduates are well prepared for careers as sustainability innovators, communications specialists, independent artists, and for graduate school in media or fine art.

Environmental Writing and Media Studies Bachelor of Arts

The Bachelor of Arts in Environmental Writing and Media Studies offers students the opportunity to explore modes of self-expression, master techniques necessary to advocate for the environment, and produce compelling media. Graduates combine a broad-based liberal arts education with focused training in creative writing, journalism, and writing for social or biological sciences. Environmental Writing and Media Studies majors produce effective websites, powerful documentary films, and strategic social media. Emphases on experiential learning, writing and editing as a process, and the development of a unique voice offer students the tools necessary for a variety of careers in the environment. Graduates from the program are well prepared to serve as environmental journalists, professional writers for nonprofit organizations, media content developers, or independent filmmakers. The Bachelor of Arts in Environmental Writing and Media Studies also serves as excellent preparation for law school, graduate programs, film and media school, or advanced creative writing programs.

Center for Experiential and Environmental Education

At Unity College we believe that learning happens most powerfully when people are deeply involved with the natural world, their communities, and each other. Here at the Center for Experiential and Environmental Education, we provide the tools that prepare our students for professional practice as engaged and environmentally aware experiential educators.

Adventure-based Environmental Education
Adventure Therapy
Captive Wildlife Care and Education
Secondary Education: Life Science
Secondary Education: Physical Science
**Center for Experiential and Environmental Education Learning Outcomes**

**Graduates of the B.S. in Environmental Education will be able to…**

1. Identify with and support the goals of Environmental Education.
2. Design education programs.
3. Collaborate with community agencies to identify problems and work towards solutions.
4. Design experiences to support place-based education and interdisciplinary learning.
5. Effectively design exhibits and interpretive displays to engage clients.

**Graduates in the B.S. in Secondary Education will be able to…**

1. Demonstrate knowledge of the central concepts, tools of inquiry, and structures of the discipline(s) s/he teaches and can create learning experiences that make these aspects of subject matter meaningful to students.
2. Demonstrate the ability to integrate the concepts, tools of inquiry, and structures among the disciplines.
3. Demonstrate knowledge of the diverse ways in which students develop and learn by providing learning opportunities that support students' intellectual, physical, emotional, and social development.
4. Plan instruction based upon knowledge of subject matter, students, and curriculum goals.
5. Understand and use a variety of instructional strategies and appropriate technologies.
6. Create and maintain a classroom environment which supports and encourages learning.
7. Demonstrate the ability to support students’ learning and well-being by engaging students, home, school, colleagues, and community.
8. Understand and uses a variety of formal and informal assessment strategies to evaluate and support the development of the learner.
9. Demonstrate an awareness of and commitment to ethical and legal responsibilities of a teacher.
10. Demonstrate a strong professional ethic and a desire to contribute to the education profession.

**Graduates in the B.S. in Captive Wildlife Care and Education will be able to…**

1. Demonstrate the art of animal training and explain the supporting science.
2. Implement health management programs
3. Design education programs
4. Display self-assured public speaking skills.
5. Demonstrate skills and knowledge necessary to enhance career opportunities.

**Graduates in the B.S. in Adventure Therapy will be able to…**

1. Demonstrate sufficient levels of self-awareness, adventure experience, teaching ability and leadership in the knowledge and skills that promote professional performance as an instructor/leader of AT
2. Analyze instructional situations to make well-advised professional and appropriate decisions/judgments in AT settings and be able to present written and oral arguments and justifications for such actions
3. Demonstrate knowledge, skill, disposition, understanding of leadership and followership as it relates specifically to AT
4. Communicate through both oral and written mediums, risk management, theoretical, and practical components of AT
5. Exhibit sufficient skill, knowledge and disposition, including those related to psychological counseling to engage populations served by the field of AT

**Graduates in the B.S. in Adventure-Based Environmental Education will be able to…**

1. Understand and explain foundational earth systems concepts inherent to environmental processes and natural history.
2. Demonstrate mastery of technical skills related to adventure-based environmental education appropriate to setting and involved equipment.
3. Understand and integrate theory and practice of experiential methodology, identify ethical and safe group practices as well as explain supporting theories.

4. Develop and provide cohesive, relevant and safe instruction in various settings to diverse groups.

5. Integrate and articulate individual understanding of leadership theory, styles, group dynamics, flexibility and judgment.

6. Have working knowledge of both remote and traditional learning environments, risk and personnel management, marketing and professionalism.

7. Show commitment to professional identity and path through involvement, interest, membership, or research, etc.
**Adventure-based Environmental Education Bachelor of Science**

Graduates of the Adventure-based Environmental Education program will make a difference in education for the future of the environment! The field of environmental education encompasses a broad spectrum - ranging from broad knowledge of ecology and geology, to group development, and safe field instruction. In this program, students explore how to use adventure activities such as backpacking, canoeing, and rock climbing as tools to make environmental learning an adventure. Students in this program will explore, plan, practice and promote action-oriented programs that will reshape learning to inspire their students. Adventure-based Environmental Education at Unity College provides every learner with an understanding of their contribution to the environment, the power of working collaboratively, and their interconnectedness with all living things. This program highlights Unity College’s mission and expertise – using experiential and adventure teaching to develop the environmental understanding needed to imagine and enact solutions to 21st Century environmental issues.

Students enrolled in Adventure-based Environmental Education should expect to enroll in the *Experiential Educators Block* within the spring semester of their first year on campus. Courses will be offered in two seven week blocks allowing for students to experience consistent field based travel within the second seven week block. Students will be off-campus for 2-3 days at a time in the second half of the block.

**Adventure Therapy Bachelor of Science**

Adventure therapy is a specialized field of psychology that uses outdoor adventure to promote interpersonal, social and psychological wellness and change. The Bachelor of Science degree in Adventure Therapy is designed to provide students the expertise, dispositions, and experience to obtain employment in therapeutic settings located within schools, community health services, and the wilderness. The program develops understanding of psychology and counseling theory to be used with adventure and technical skills.

Students enrolled in Adventure Therapy should expect to enroll in the *Experiential Educators Block* within the spring semester of their first year on campus. Courses will be offered in two seven week blocks allowing for students to experience consistent field based travel within the second seven week block. Students will be off-campus for 2-3 days at a time in the second half of the block.

Captive Wildlife Care and Education Bachelor of Science

This program is designed for students interested in careers related to the care and husbandry of wild species in captivity and education of the public concerning conservation issues. Students receive a solid foundation in the biological sciences, specialized courses related to wild animal husbandry and management, and classes that develop educational and interpretive techniques. Target employers include zoos, aquariums, rehabilitation, and wildlife education facilities.

Secondary Education: Life Science Bachelor of Science

The Secondary Education program prepares students to be excellent secondary science teachers. Students develop the knowledge and skills necessary to teach using the local environment and the broader world. Specialized skills are developed through a highly experiential program that includes a combination of on-campus classes with integrated field experiences. The capstone experience is a full-time semester long student teaching in an area school.

Center for Natural Resource Management and Protection

The Earth’s natural resources are precious and at risk. We all have a stake in a healthy, productive environment. Today's land stewards and managers face new and complex challenges as they work to sustain and protect the earth's biodiversity for us all. That’s why it is so important for us to provide our students with real-life natural resource management strategies and effective protection measures as they prepare to enter their environmental careers.

**MAJORS**

Conservation Law Enforcement  
Parks and Forest Resources  
Wildlife Biology  
Wildlife and Fisheries Management
Center for Natural Resource Management and Protection Learning Outcomes

Graduates in the B.S. in Conservation Law Enforcement will be able to…

1. Demonstrate an understanding of the fundamental principles of the American form of government and the responsibilities of citizenship.
2. Demonstrate knowledge of the criminal justice system and the ability to perform in an ethical and professional manner.
3. Demonstrate the field-based knowledge and skills necessary to work in the natural environment.
4. Demonstrate respect for, and knowledge of law.
5. Demonstrate the ability to communicate effectively.
6. Demonstrate a commitment to environmental stewardship.
7. Demonstrate management and administration skills suitable for conservation law enforcement professional.

Graduates in the B.S. in Parks and Forest Resources will be able to…

1. Communicate effectively in oral and written formats.
2. Demonstrate knowledge of land management and protection agencies and the ability to work as a professional within them.
3. Demonstrate management and administration skills suitable for a Parks and Forest Resources professional.
4. Demonstrate a commitment to sustainable stewardship and ecotourism.
5. Demonstrate a commitment to citizenship

Graduates in the B.S. in Wildlife Biology will be able to…

1. Demonstrate proficiency in identification of species, sex, and age of common North American wildlife.
2. Demonstrate ability to successfully perform common wildlife management field skills.
3. Demonstrate the ability to apply theoretical concepts to wildlife management problems.
4. Communicate effectively in a professional style or manner.
5. Demonstrate understanding of professional behavior and ethics.
6. Identify and evaluate essential components of wildlife management plans.
7. Demonstrate ability to apply modern analytical tools to management questions.

Graduates in the B.S. in Wildlife and Fisheries Management will be able to…

1. Demonstrate competency in the concepts and skills underlying the biological sciences.
2. Understand and study resource management and protection issues through using primary literature, experimental design, field and lab techniques, and data analysis.
3. Demonstrate competency in oral communication, scientific writing, problem solving, and quantitative reasoning.
4. Gain life-long learning skills and perspective developed through a liberal-arts education.
5. Demonstrate ability to apply their scientific knowledge and skills to solving natural resource management and protection issues in their chosen profession and in life as a knowledgeable citizen.
Conservation Law Enforcement Bachelor of Science

Conservation Law Enforcement prepares students for a comprehensive understanding of fields related to resource and environmental protection. Building on a broad base of law enforcement knowledge, students learn the importance of integrating science and law into their theoretical and practical views concerning conservation of our natural resources. Active classroom and laboratory experiences focus on exciting topics like wildlife techniques, marine and wildlife law, crime scene investigation, biology and fisheries sciences. Our students gain distinct advantages from our carefully designed courses intended for careers in conservation and environmental and marine law enforcement. Successful students are employable in agencies dedicated to enforcing conservation and environmental laws at the federal, state and local level. Opportunities include positions as game wardens, natural resource officers, marine patrol officers, harbor masters, and environmental protection officers.

- 30 credits at the 3000 level or above
- An overall cumulative GPA of 2.0 or above
Parks and Forest Resources Bachelor of Science
The Parks and Forest Resources degree prepares students with a comprehensive look at land management, with particular attention to forests and parks. This program will provide students with a foundation in the fundamentals of resource and visitor management practices utilized in the governmental, nonprofit and for-profit sectors. Students will integrate the sciences with resource management, planning, policy, and administrative skills to be informed stewards of our natural resources.

Successful graduates meet the entry requirements for employment in federal, state, local, nonprofit, and for-profit land management agencies/organizations. Students are prepared with the skills and educational background to be successful in organizations such as: the National Park Service, US Forest Service, State Park and Forest agencies, local and regional parks and land management agencies, land trusts, and for-profit land management consultants/organizations.

**Wildlife Biology Bachelor of Science**

The Wildlife Biology program immerses students into the depths of wildlife science. Students who are serious about researching the biology and habitats of our free-ranging wild mammals and birds receive a solid background of biological and ecological knowledge for sustaining populations in our ever-changing environment. Program courses include a full suite of wildlife courses such as North American Wildlife and Wildlife Habitat and Assessment, plus advanced biological and ecological science courses such as Cell Biology, Comparative Animal Physiology, Evolution and Population Genetics, and Ecosystem Ecology.

Graduates of the Wildlife Biology program are qualified to pursue careers as wildlife biologists and technicians; however, they are encouraged to pursue further education in graduate degree programs to enhance their ability to be successful in the highly competitive field of wildlife research. Students wishing to pursue graduate studies should also consider completing the Graduate School Core for Biological Sciences in addition to their Wildlife Biology curriculum.

Wildlife and Fisheries Management Bachelor of Science
This Wildlife and Fisheries Management Program builds from the core Unity Environmental Stewardship Curriculum, providing a broad interdisciplinary knowledge base for environmental leaders, integrates quantitative skills with social sciences and communications, and develops student ethics and dispositions to become professional leaders for wildlife and fisheries conservation. Graduates will have mastered knowledge of ecological and biological principles that underpin the disciplines of wildlife and fisheries management. This knowledge base develops from coursework in population and community ecology, population assessment, habitat assessment, and resource modeling. In addition, all wildlife and fisheries majors will have experiential learning in the techniques and practices of wildlife and fisheries management and will be familiar with the concepts that underlie manipulations of wild populations and their environment to maintain these sustainable resources. Students then choose between the concentrated studies in their chosen management discipline: wildlife or fisheries. Graduates of these programs are qualified for entry into the wildlife and fisheries professions as field biologists or technicians. The fisheries concentration allows graduates additional opportunity with cultured food and industrial products as algae, shellfish, crustaceans, and finfish.

**Center for Sustainability and Global Change**

Tomorrow’s environmental professionals need to be smart, flexible, and creative problem solvers. They need to be prepared to face 21st century environmental challenges. That’s why we’ve developed a suite of programs that combines education, outreach, and service learning, intended to cultivate a broad awareness of global change issues. Sustainability and Global Change students, working with community-partners, address serious environmental issues through the development and application of real-life sustainability measures needed to protect our natural and social worlds.

**MAJORS**

Earth and Environmental Science
Environmental Policy, Law, and Society
Sustainable Agriculture
Sustainable Energy Management
Center for Sustainability and Global Change Learning Outcomes

Graduates of the B.S. in Earth and Environmental Science will be able to…

1. Apply theory to real world environmental situations in the field and lab.
2. Apply research skills to earth and environmental science questions.
3. Possess strong and effective communication skills (oral, written, visual).

Graduates of the B.S. in Environmental Policy, Law, and Society will be able to…

1. Develop effective policy approaches to environmental problems, integrating knowledge of political process, the American legal system, economics, science, and history.
2. Communicate policy approaches to environmental problems at a level suitable for professional service and graduate studies.
3. Understand, analyze, and integrate environmental policy and legal concepts at a level appropriate for professional service and graduate studies.
4. Demonstrate ability and commitment to work collaboratively to achieve a civic aim accompanied by reflective insights or analysis about the aim and accomplishment of one’s actions.

Graduates of the B.S. in Sustainable Agriculture will be able to…

1. Apply fundamental concepts and principles of biology and agroecology to improve food production in an era of global change.
2. Think critically about food and agriculture systems.
3. Communicate effective approaches to food systems at a level appropriate for professional service or graduate school.

Graduates of the B.S. in Sustainable Energy Management will be able to…

1. Use fundamental principles of matter and energy to solve practical problems of energy and climate.
2. Communicate at a technical level suitable for professional service.
3. Be competent in the use of modeling, spatial, and quantitative reasoning for professional service.
Earth and Environmental Science Bachelor of Science
Earth and Environmental Science (EES) majors study the formation, evolution, and monitoring of the physical landscape – past, present, and future. Students will also explore interconnections between Earth systems to gain a broader understanding of the discipline and see how change may manifest itself elsewhere. Students study these systems from the small scale (e.g. molecules) to the large scale (e.g. mountain ranges) over time scales spanning from minutes (e.g. chemical reactions) to thousands of years (e.g. environmental change). Students in the EES program will learn a variety of laboratory and field skills and apply this knowledge in real world scenarios to become better prepared for graduate school and/or a career. Students participate in research projects as part of individual classes or while working directly with faculty members. Students will have considerable opportunity to develop strong Geographic Information Systems (GIS) skills and learn how to utilize other modes of technology including computer models and data loggers in lab and field pursuits. Recent Unity College EES graduates are employed professionally in analytical labs or as environmental consultants, or are continuing their studies in M.S. and Ph. D. programs around the nation.

- An overall cumulative GPA of 2.0 or above
Environmental Policy, Law, and Society Bachelor of Science

The Environmental Policy, Law, and Society program is designed to give students tools and knowledge needed to improve the environmental health of both humans and the natural world through wise governmental and non-governmental decision making. Studies in law, science, social science, environmental ethics, and history provide an interdisciplinary framework for understanding and analyzing the broad range of factors that play a role in environmental policy formation. The program partners with environmental and conservation agencies, non-profits, and green enterprise, to model, as well as train students in, the practical application of concepts and methods for civic engagement and policy decision-making. Employment opportunities in environmental policy and law are expected to increase in the near future in the public, private, and non-profit sectors.

Unity College Catalog 2013-2014
**Sustainable Energy Management Bachelor of Science**

This program allows students to develop their talents and skills as applied scientists, entrepreneurs, business managers, and planners in the fields of energy efficiency, renewable energy, and related responses to climate change. Emphasis is placed on practical skills based on solid general theory, on understanding and employing technology, on practical implementation and related accounting for costs and benefits. Students learn to both evaluate and implement emerging technologies and design, quantify, and account for programs of energy efficiency and climate emission reductions. Remunerative and useful employment for these skills can be found at different scales and sectors of society: for government and in science research, for industry and private businesses, and for communities and individual households via contracting or energy auditing. Upon graduation, students may choose to work in the emerging job market in government sustainability implementation and planning, to work as lobbyists and advocates in the same arena, to work in the housing market as implementers and auditors of sustainability and energy efficiency measures, to work in industry as an environmental compliance officers, sustainability coordinators or sustainability officers, or to go on to graduate school in the fields of public policy, planning, architecture, environmental law, environmental and industrial design, or climate mitigation. In the event that the student chooses not to work in the energy field they are competitive candidates to enter graduate school programs in business or science, or to apply their problem solving and quantitative skills to some other aspect of business or governance.

An “Environmental Studies” course  
An Internship, Thesis, or Academic Field Experience (minimum of 3 credits at the 3000 level or above)  
Passing grade on computer applications proficiency exam or LR 1222 Introduction to Computer Applications

**College Wide Requirements:**

- A minimum of 120 earned credit hours  
- A minimum of 30 credit hours earned at Unity College  
- 30 credits at the 3000 level or above  
- An overall cumulative GPA of 2.0 or above
Academic Minors

An academic minor is a specified sequence of courses totaling 18 to 24 credits and requiring at least nine credits of 3000 or 4000 level work. Twelve of the credits must be outside of your major degree requirements and other minor requirements. Students are limited to declaring one minor in addition to their major(s). Minors do not lead to a degree. No substitution or waiver of courses in a minor is allowed. The college does not guarantee courses for a minor.

Applied Mathematics and Statistics

A minor in Applied Math and Statistics will familiarize students with techniques and applications of mathematical modeling in fields of interest to them. Fundamentals of modeling system change will be discussed in the Calculus sequence. Working with data will be addressed in the Statistics sequence. By taking a mathematics-intensive course in their field of interest, students will learn how mathematical models apply to the world around them.

MA 2003 Applications in Mathematics: Theme
MA 2243 Elementary Statistics
MA 2333 Calculus I
MA 3263 Biometry or MA 3253 Applied Statistics
MA 3443 Calculus II

Two of the following:
- BI 3423 Evolution and Population Genetics
- BI 4423 Ecosystem Ecology
- ES 3213 Applied Geographic Information Systems
- GL 4003 Global Change
- MA 3263 Biometry
- MA 3253 Applied Statistics
- MA 3443 Calculus II
- PL 4313 Econ. and Quant. Analysis of Enviro. Policy
- PS 2004 Physics: Mechanics and Energy
- PS 3003 Sustainable Energy
- WF 3013 Population Assessment and Management

Botany

Plants are the basis of an ecosystem. A solid understanding of plants serves biologists and naturalists of all types, especially as plants provide food and habitat for wildlife. The botany minor has a core of four courses that comprise structure, function, identification, and environmental context of plants. The additional courses are a choice, allowing students to cast their minor in a more applied or basic mode according to individual goals.

BI 2004 Population and Community Ecology
BI 2043 Dendrology
BI 2053 Systematic Botany
BI 3214 Biology of Plants

Two of the following:
- BI 3063 Agroecology
- BI 3323 Conservation Biology
- BI 3423 Evolution and Population Genetics
- BI 4243 Genetics and Molecular Biology
- BI 4423 Ecosystem Ecology
- FY 3213 Forest Silviculture and Management
- SA 3363 Soil Fertility
- WF 3013 Population Assessment and Management
Ecology

The ecology minor is intended to complement other environmental majors and help students develop the skills to use ecological science to address a wide range of environmental issues.

BI 2004 Population and Community Ecology
BI 3423 Evolution and Population Genetics
BI 4423 Ecosystem Ecology

Three of the following:

- BI 2033 Marine Biology
- BI 2053 Systematic Botany
- BI 3063 Agroecology
- BI 3173 Animal Behavior
- BI 3214 Biology of Plants
- BI 3233 Ichthyology
- BI 3253 Invertebrate Zoology
- BI 3263 Special Topics in Biology
- BI 3273 Mammalogy
- BI 3283 Ornithology
- BI 3293 Entomology
- BI 3323 Conservation Biology
- BI 3654 Microbiology
- BI 4013 Marine Ecology
- ES 3183 Limnology
- GL 3433 Soil Science
- MA 3263 Biometry
- WF 3013 Population Assessment and Mgmt

Environmental Interpretation and Education

The Environmental Interpretation and Education minor offers students the opportunity to explore the fields of formal and non-formal learning environments, how people learn, the needs of diverse audiences and the best practices in instructional as well as heritage and resources interpretive settings. This minor will support the students who plan on working with educational/interpretive programs in a variety of settings including zoos, wildlife parks, aquariums, parks, environmental learning centers, and other educational settings.

PR 1023 Interpretation of Natural and Cultural Heritage
CM 2123 Environmental Communication
ED 1013 Foundations of Education
PR 4123 Interpretative Methods
ED 2113 Instruction and Assessment Design

One of the following:

- CM 2233 Digital Media Production
- ED 2212 Teaching with Technology

Six credits from the following:

- CM 3113 Documentary Film
- CM 3123 New Media
- ED 3333 Education for Exceptional Children and Youth
- ED 3443 Teaching Science In the Secondary Schools
- EH 3213 Professional and Technical Writing
- EH 4213 Writing for Publication
- PY 3123 Educational Psychology
Psychology
The Unity College minor in Psychology is designed to provide interested students with a broad overview of topics and domains within the field of psychology. The science of psychology is a rich compliment to a variety of liberal arts and professional degree programs. The psychology minor will introduce students to theoretical concepts, research methodologies, and practical applications within the diverse field of psychology. The program will allow students to support their major field of study by increasing their understanding of human behavior and by enriching their credentials for prospective employers in the human service field or for pursuing graduate studies.

PY 1013 Introduction to Psychology
PY 2013 Human Development
PY 2113 Group Process and Management
PY 3123 Educational Psychology
PY 3133 Abnormal Psychology
PY 3013 Human Sexuality or PY 4223 Counseling Theories for Wilderness Programming

Zoology
In the Zoology minor students investigate the behavior, ecology, and physiology of animals. Students then focus on an aspect of animal biology that fascinates them ranging from particular types of animals, such as in ornithology, to how animals work, such as through cell biology or genetics.

BI 2004 Population and Community Ecology
BI 3173 Animal Behavior
BI 3204 Comparative Animal Physiology

One of the Following:
BI 2304 Cell Biology
BI 3423 Evolution and Population Genetics
BI 4243 Genetics and Molecular Biology

Two of the following:
AF 4313 Applied Fish Physiology
BI 2033 Marine Biology
BI 3233 Ichthyology
BI 3253 Invertebrate Zoology

BI 3273 Mammalogy
BI 3283 Ornithology
BI 3293 Entomology
WF 4034 Animal Health
Graduate School Preparation Core for Biological Sciences

The Graduate School Core for Biological Sciences is a set of courses that supplement programs in Wildlife Biology, Marine Biology, Biology, Captive Wildlife Care and Education, or Secondary Education and provide students with the foundations in physical sciences and math that are needed for entry and success into graduate school programs. Students should declare the core in the second semester of their sophomore year, or later, after demonstrating an ability to maintain a high enough cumulative grade point average (3.00) to make them competitive for graduate school. Once declared, students will now be given some priority for these courses that are not necessarily required for graduation with their major.

The Graduate School Preparation Core for Biological Sciences

CH 2324 Organic Chemistry
CH 4034 Biochemistry
MA 2333 Calculus I
MA 3263 Biometry
PS 2004 Physics: Mechanics and Energy

At least one of the following:

BI 3654 Microbiology
BI 4243 Genetics and Molecular Biology
CH 4044 Environmental Chemistry
ES 3213 Applied Geographic Information Systems (GIS)
GL 2033 Geology of Environmental Problems
GL 3044 Surface and Groundwater Hydrology
GL 4003 Global Change
MA 3443 Calculus II
PS 2014 Physics: Heat, Electricity and Magnetism

Requirements for declaring the Graduate School Preparation Core:

- Student must have and maintain a cumulative grade point average of 3.00
- Student must have earned a minimum of 45 credits
- Student must submit written confirmation of completion of the GRE Practice Test in the Career Resource Center
Unity College Honors Program
The Unity College Honors program offers an engaging challenge for academically-talented and motivated students from all academic disciplines. The Honors Program takes an integrated approach, valuing permeable boundaries between learning environments and disciplines. Through a variety of curricular and co-curricular components, Honors students will be encouraged to reach their potential as independent thinkers and creative problem solvers.

Early requirements for incoming students include either a minimum combined SAT score of 1800 (or ACT of 25), or high school GPA above a 3.50 on a 4.0 scale. Demonstrated motivation to succeed and exceptional achievements (e.g., creative abilities, overcoming obstacles, and extensive community service) are also considered. Unity College students who did not enroll in the Honors Program in their first semester in College and who meet the Honors Program requirements may apply to the Program at any point during their time at the College. Transfer students with a cumulative GPA of at least 3.50 at their previous college may also enroll in the Honors Program, and may apply up to 9 credits of Honors credits that were accepted in transfer to Unity College towards the Honors Program. Details about the requirements and process of admission to the Honors Program can be found in the Unity College Honor Program Handbook.

To fulfill the Honors Program requirements, students must complete 21 credits of Honors courses and one track of the North Star Leadership Program, present annually in the Student Conference (after their first year) and maintain a cumulative GPA of 3.50.

All students must complete:
HN 2061 Honors Seminar
HN 4063 Honors Transdisciplinary Capstone
Two courses with different course codes from the Honors Menu Courses with Honors Projects

Other Options for fulfilling the required 21 credits include:
BI 1164 Honors Biology: Diversity of Life
CM 1063 Honors Composition and Communication I
CM 1163 Honors Composition and Communication II
HN 3063 Honors Multidisciplinary Independent Study

Honors Menu Courses – These courses may be taken for Honors credit if you complete an Honors project associated with the course. For any course being taken for Honors credit an Honors Project Agreement form (found in the Unity College Honors Program Handbook) must be submitted to the Honors Committee by the end of the second week of the semester:

AR 2013 Painting
AR 3043 Designing with Nature
BI 3654 Microbiology
BI 4423 Ecosystem Ecology
CL 3224 Crime Scene and Investigative Techniques
CM 3113 Documentary Film
ED 2003 Experiential Theory and Practice
ED 3443 Teaching Science in the Secondary Schools
EH 2213 Introduction to Environmental Writing
EH 4213 Writing for Publication
ES 3183 Limnology
ES 3213 Applied Geographic Information Systems (GIS)
GL 3044 Surface and Groundwater Hydrology
GL 4003 Global Change
MA 3443 Calculus II
PR 4123 Interpretive Methods
PS 3303 Green Building: Assess, Design, Retrofit
WF 3013 Population Assessment and Management
Course Descriptions

Administrative Science

AS 2111 Professional Development
This course will help to better prepare students for entering a professional work environment. Students will learn foundational professional development skills such as resume and cover letter writing, interviewing techniques and business etiquette. Students will also learn the process of arranging an internship for credit, Lewin/Kohl’s Experiential Learning model, writing effective learning objectives, the stages of an internship, selecting a meaningful internship experience, understanding organizational culture and risk awareness/management. Students planning to complete an internship are strongly encouraged to enroll in this class. 2 class hours for seven weeks
Credits: 1
Offered: Semesters I and II
Prerequisites: None

AS 4123 Sustainable Enterprise
This is a problem-based learning course in sustainable enterprise; students will begin with the basics of business start-up and operation from envisioning a product or service to understanding market niche and the constraints and opportunities posed by the taxation and regulatory environment. The course then moves to operations: the basic techniques for the financial management of a business including bookkeeping and accounting (ledgers, balance sheets, profit/loss statements, and cash flow analysis) and general business problem-solving. In addition to working on their own plan for a green business, students will look at case studies of other sustainable enterprises drawn from areas such as energy, agriculture, food services, and ecotourism. The concepts and ideas learned in this course will apply to both for-profit and non-profit enterprises.
Credits: 3
Offered: Semester II
Prerequisites: Junior Status

AS 4333 Administration and Organization
This course is designed to give students of public administrative and non-governmental operations an opportunity to evaluate management systems, strategies, and policies. Students will conduct administrative operations (planning, human resources, financial management, supervisory and employee ethics, risk and liability assessment), prepare reports, and respond to situations that might occur in those preparing to enter careers in outdoor studies.
Credits: 3
Offered: Semester II
Prerequisites: Junior Status

AS 4403 Public Service Supervision
This course introduces the components and functions of supervision as they apply to public service employees with a focus on conservation law enforcement and other enforcement agencies of the criminal justice system. Topics include; role of a supervisor, span of control and discretion, recruiting, training, and retention of personnel, personnel complaints and investigations, employee discipline, funding and budgeting, communications, and other related topics. Upon completion, students should be able to identify and discuss the basic components and functions of various public service organizations and their supervisory and managerial operations.
Credits: 3
Offered: Semester I
Prerequisites: Junior Status

Adventures in Education

AE 1003 Experiential Learning Initiatives
This course acts as an introduction to the current programs, methods, and practices that employ Experiential Education. Students will develop an understanding of the history, fundamentals of, and engage with the spectrum of Experiential Learning programs. During the field portion of this course students will be exposed to and participate in programs that represent the spectrum of adventure-based environmental and therapeutic education. Students will develop a professional portfolio to include an educational philosophy and professional plan. This course is a part of the Experiential Educators Block.
Credits: 3
Offered: Semester II
Prerequisites: None
AE 1012 Rock Climbing
This 8-week course covers fundamentals of rock climbing. Students will work on the indoor climbing wall and outdoor cliffs learning belaying techniques, construction of anchor and safety systems, and movement skills. Students will participate in a weekend climbing trip, either two separate days or as an overnight trip, depending on conditions and site location. Hours dependent on semester taken
Credits: 2
Prerequisites: None
Offered Semester I – First 8 weeks of semester and one weekend
Offered Semester II – Last 8 weeks of semester as part of the Experiential Educators Block

AE 1013 Physical Fitness and Wellness
This course is designed to introduce students to various components of lifetime fitness and wellness. Fitness components include assessment in the following areas: cardiovascular endurance, muscular strength and endurance, flexibility, and body composition. Individual testing will be performed in each area. Introduction to various types of exercise including sessions in yoga, Pilates, martial arts, and aerobics may be included. Wellness components will include nutrition, cardiovascular disease and cancer prevention, stress management, and substance abuse. The components of the course will be taught through a combination of lecture, self-assessment, and lab exercises. Student will be expected to partake in all exercise labs. 3 class hours
Credits: 3
Offered: Semester II
Prerequisites: None

AE 1032 Introduction to Backpacking
This 7-week course is an introduction to backpacking and travel techniques. The course includes: choosing clothing and equipment, Leave No Trace principles, reading and understanding guidebooks and maps, compass use, trail selection, stove use, time management, emergency response plans, and basic cooking. One weekend trip is required.
1 class hour
Credits: 2
Offered: Semester I
Prerequisites: None

AE 1062 Introduction to Canoeing
This 6-week course will serve as an introduction to the knowledge and skills associated with flat, moving and white water canoeing. Topics will include dynamics of canoe equipment, clothing selection, short trip planning and safety considerations, strokes, basic self and equipment rescues as well as the effects of weather on enjoyment of the sport. This course includes a weekend trip for a whitewater canoeing trip. 5 class hours
Credits: 2
Offered: Semester I
Prerequisites: None

AE 1072 Winter Pursuits Level I
This 7-week course is designed to introduce winter skills to students of all majors. It includes snowshoeing, cross-country skiing, and winter camping. Topics include: clothing and equipment selection, travel techniques, self-care in a cold environment, group management, and food selection. One weekend trip is required. 2 class hours
Credits: 2
Offered: Semester II
Prerequisites: None

AE 2002 Adventure Facilitation
This course takes place during the first seven weeks of the semester. The focus of this active course is to develop an understanding of the tools and activities that comprise adventure-challenge and experiential learning. Students will develop programs to include aspects of group membership, diversity and dynamics. Planning, sequencing, facilitation and evaluating adventure-challenge programs will occur with off-campus groups. Adventure-challenge core concepts are designed to help develop self-esteem, trust, cooperation, and independent thinking. Many of the activities can be adapted to help teach other academic subject areas such as math, science, geography, and health. This course may involve some use of the physical elements of a challenge course but learning will primarily have a low and no prop focus. 2 class hours
Credits: 2
Offered: Semester II
Prerequisites: None
**AE 2012 Challenge Course Programming**
This course will further a student’s ability in the use of Adventure-challenge concepts and skills – facilitation, group dynamics, and diversity; program planning and risk assessment, implementation, debriefing, and evaluation. Content will regularly expose students to initiatives; low and high challenge elements in order to learn about current construction, set-up, and safety techniques of the challenge course industry. Students will also provide and receive professional level feedback and assessment (self, peer and instructor) of facilitation skills and program effectiveness. Course work will involve off-campus groups and require pre-arranged class trips. This course is a part of the Experiential Educators Block.

Credits: 2  
Prerequisites: None  
Offered: Semester II

**AE 2022 Introduction to Sea-Kayaking**
This 8-week course is designed to immerse students in core sea-kayak concepts and equipment with progressive development towards novice sea-kayak specific skill sets and decision making. Students will learn fundamentals of kayak and equipment design, a variety of strokes and rescues, and be introduced to bracing and rolling. Secondary core content will include group expeditionary planning and travel, chart and compass, effects of weather and water on the paddler, tidal movement, and Maine oceanic ecology.

3 class hours  
Credits: 2  
Prerequisites: None  
Offered: Semester I

**AE 2032 Technical Winter Mountaineering**
Technical Winter Mountaineering is designed to teach basic technical climbing skills in a winter environment. Skills covered include ice climbing, snow and ice travel, winter anchor and belaying systems, avalanche awareness, introduction to the alpine environment, and glacier travel. A pre-semester trip in January is required.

5 class hours  
Credits: 2  
Prerequisites: AE 1012  
Alternative Years Odd  
Offered: Semester II

**AE 2042 Winter Pursuits Level 2**
This 7-week course is designed for students who want to take their winter pursuits to a more challenging level. Topics will include: a review of basic clothing and equipment needs, equipment repair, weather, nutrition, traveling safely, and recognizing avalanche terrain. Students will learn advanced travel techniques and build a pulk sled for carrying gear. Students will travel by snowshoe and cross-country skis to reach pre-determined terrain. The course will include one full day trip and will culminate with a 5-day trip over spring break.

3 class hours  
Credits: 2  
Prerequisites: AE 1072  
Alternate Years Even  
Offered: Semester II

**AE 2122 Intermediate Rock Climbing**
Intermediate rock climbing assumes prior knowledge of top-rope anchor construction as well as the basics of knot tying and belaying. The course will focus on top-rope climbing systems and site management, learning to place rock protection, support lead climbers as a second, and cover beginning leading skills. Students will gain experience in face and crack climbing, placing protection, anchoring, moving efficiently as a team member on multi-pitch climbs, and rappelling. One weekend trip will be scheduled.

5 class hours  
Credits: 2  
Prerequisites: AE 1012  
Alternate Years Odd  
Offered: Semester I

**AE 3013 Experiential Education, Ethics and Moral Development**
This course will delve into the efficacy and applied scope of adventure and experiential practices. Focusing in-depth on the history, influential theorists and current practices of various types of experiential education programs students will analyze the current state of the field and its influence on issues of persona; cognitive and character development; issues of inclusion; social development and social responsibility; and the importance of diverse populations. Through research and practice, students will critically assess how to maximize learner development. Students will also analyze the distinction between their ethical responsibilities in field and how that role compliments aspects of moral development for learners.

3 class hours  
Credits: 3  
Prerequisites: ED 2003  
Offered: Semester II
AE 308X Expeditionary Assistant
This course is designed for students with appropriate qualifications to arrange and assist leading an adventure or travel-based course. Students are expanding their knowledge and skills in coordination and instruction in technical skills, logistics, and hands-on lab sessions. This course is repeatable with a different topic. Students must complete a learning contract with the course instructor. *Hours dependent on individual*
Credits: 1-2
Prerequisites: Consent of instructor

AE 3233 Adventure Therapy Programs
This course is designed to introduce students to outdoor programs that deal with people with psychological disabilities. Students will learn the characteristics of certain disabilities and will examine various therapeutic wilderness programs developed to work with specific groups, such as people who have been abused, who have post-traumatic stress disorder, or who are patients in psychiatric hospitals. *3 class hours*
Credits: 3
Prerequisites: AE 2002, AE 2012

AE 4003 Adventure Leadership and Programming
This course is the capstone for the Adventure programs. Students enrolled in this course will be expected to apply and integrate previous course work related to informal learning practices, practice effective group management, enhance learner relationships, and implement safe field work practices while delivering innovative and effective experiential curriculum. Students will support programming by engaging with off campus partners or agencies. Students will complete and present a professional portfolio to a unique advisory group. A three day trip is required. *3 class hours*
Credits: 3
Prerequisites: AE 1003, ED 2003

Anthropology
AN 1123 Cultural Anthropology
Anthropology is the study of culture as a human creation: its origins, development or evolution, and possible future. The course covers the range of variation in human life-styles and basic cultural similarities. There will be an examination of selected tribal, peasant, and industrial cultures, with an emphasis on how biological, cultural, and ecological factors shape them. Comparative technology, kinship, social structure, religion, magic, art, economics, cultural change, and applied anthropology will be discussed. *3 class hours*
Credits: 3
Prerequisites: CM 1003

AN 2113 Society and Sustainability
The world’s high energy consumption patterns of the last eight years are unique in human history and are unsustainable. We must develop new forms of energy use, but also new or rediscovered social practices: alternative ways of living with each other in a world after peak oil. This course studies alternative and emerging social systems such as cooperatives, micro-banks and local currencies, land trusts, Transition Towns, new electoral systems, worker-owned companies, systems of restorative justice, regional community planning, and consumer movements. We will draw on examples from communities and nations worldwide, compare their effectiveness, and image ways to implement social change for sustainability. *3 class hours*
Credits: 3
Prerequisites: Sophomore Status

Aquaculture and Fisheries
AF 3113 Principles of Aquaculture
The mechanics of controlling the biological and physical environments of aquatic organisms at the mass production scale is the subject matter of this course. Stocking densities, feeding schedules, food quality and quantity, gross and net production, and exercises to design site hatchery and rearing facilities will be discussed in lecture and developed by computer simulations and practical applications in the laboratory. *2 class hours; 2 laboratory hours*
Credits: 3
Prerequisites: BI 1114, MA 2243, and BI 2004 or WF 2433
AF 3324 Fisheries Science and Techniques
Fisheries Science and Techniques will offer experiences in fisheries stock management based on the assessment of individual organisms and populations. Sampling techniques and gear employed in a variety of habitats will offer collecting and processing opportunities for several species of freshwater fish. These samplings of local fish stocks and other exemplary data sets will then be analyzed as appropriate for sex ratios, age and growth, population age structure, reproductive capacity and success, recruitment, food habits, migrations, population estimates, and other aspects of fishery science and management. Limited experiences with marine fish and invertebrates may be possible; weekend day trips may be scheduled to Portland fish docks and markets or to Long Cove in Searsport to examine aspects of marine fisheries. Numerous activities will supplement class assignments. Service-learning will be formalized during classroom discussion, through experiential activities in the community, and by contribution of data to fisheries management agencies. 3 class hours; 2 laboratory hours
Credits: 4 Offered: Semester I
Prerequisites: BI 1114, MA 2243, and Junior Status

AF 4313 Applied Fish Physiology
The physiological basis for control and manipulation of fish maintenance, growth, and reproduction will be topics in this course. Theoretical and conceptual physiological topics discussed will be the aquatic adaptations of organ systems, reproduction, homeostasis, digestion, excretion, respiration, locomotion, sensory functions, immune response, and genetics pertinent to fish will be discussed. Research design introduced in lecture will be applied in the laboratory. Lectures will examine the hormonal and enzymatic systems of various fish as they occur in a natural setting and in successful aquaculture. These physiological topics will be applied as in common aquaculture practice through use of dietary additives, manipulated photoperiods, hormone induced spawning, stocking density, parasites and diseases, disease treatment, fish waste, and waste management. 2 class hours; 2 laboratory hours
Credits: 3 Offered: Semester II
Prerequisites: AF 3324 or BI 3233 or BI 3204 (may be taken concurrently) Alternate Years Even

Art

AR 1013 Drawing
The course develops the process of drawing from reality, stressing both skill and individual expression by exploring volume, space, form, value, and materials. 4 studio hours
Credits: 3 Offered: Semesters I and II
Prerequisites: None

AR 1023 Ceramics
Ceramics is a hands-on studio class using clay as a means of expressing the self in the environment. A variety of hand building, wheel forming, surface finishing, glazing, and firing techniques will be explored. At the same time, how artisans in other times and other cultures used clay and how the objects they made functions in their respective societies will be considered. 4 studio hours
Credits: 3 Offered: Semesters I and II
Prerequisites: None

AR 2003 Introduction to Drama
This course will investigate the drama as literature and as theatrical production, with special emphasis on the great periods of Western theatre. Representative plays from ancient Greek to modern times, including Japanese Noh plays, will be read and discussed in terms of production characteristics. Various methods of play production, stagecraft, costuming, lighting, etc. will be studied. Trips to theatre productions will be a required part of the course. 3 class hours
Credits: 3 Offered: Semester II
Prerequisites: None Alternate Years Even

AR 2013 Painting
This is an introductory course designed to establish a working familiarity with traditional techniques of painting. The semester will be based on painting from actual conditions. There will be an emphasis on how to see and interpret color and form in two dimensions. 4 studio hours

Unity College Catalog 2013-2014
AR 2023 Photography
This introductory course focuses on teaching basic camera use and image production. Special attention will be devoted to learning to “see” photographically: to discern qualities of light and composition. 4 studio hours
Credits: 3  
Offered: Semester II  
Alternate Years Even
Prerequisites: None

AR 2033 Sculpture
This course explores the texture, forms, and substance of a variety of traditional and nontraditional materials. Strong emphasis is placed on concepts of three-dimensional design and how sculpture relates to the history of ideas. 4 studio hours
Credits: 3  
Offered: Semester II
Prerequisites: None
Alternate Years Odd

AR 2113 Creative Writing: Theme-Based
In this experiential course, students improve their use of creative writing techniques including: metaphor, characterization, and voice, while exploring innovations in form and the writing process. Emphasis will be placed on revision and fostering a productive workshop environment. Topics for this course might include: sense of place, songwriting, or specific genres such as poetry, drama, and the short story. This course may be repeated for credit if a student chooses a different topic. 3 class hours
Credits: 3  
Offered: Semesters I and II
Prerequisites: CM 1003

AR 3013 Advanced Painting
This course expands upon the skills and concepts introduced in Painting. There will be an emphasis on developing technical and conceptual proficiency. 4 studio hours
Credits: 3  
Offered: Semester II  
Alternate Years Even
Prerequisites: AR 2013

AR 3023 Advanced Ceramics
This course expands upon the skills and concepts introduced in Ceramics. There will be emphasis on developing a high level of proficiency in a variety of wheel forming and hand building techniques as it relates to clay. This course brings art and science together to explore the chemical structure of clay and glazes and how it connects to human expression in the ceramic arts. Sustainable living with well-crafted handmade ceramic objects will be emphasized. 4 studio hours
Credits: 3  
Offered: Semester I  
Alternate Years Even
Prerequisites: AR 1023

AR 3033 Environmental Photography
This is a project oriented course which may include nature and wildlife photography, but also may focus on photo documentation of environmental problems or projects, landscape portraiture, or social aspects of environmental issues. 4 studio hours
Credits: 3  
Offered: Semester I  
Alternate Years Even
Prerequisites: AR 2023

AR 3043 Designing with Nature
Can human society live in harmony with the rest of nature? Can we imagine what a sustainable human landscape/ecosystem would look like and how it would function? Can we imagine a place where both humans and nature can thrive? This course brings art and science together to explore questions of the structure and function of healthy human habitation in nature. This course goal is to create a holistic vision for sustainable living via interdisciplinary inquiry. The course will rely heavily on the work of others thriving to realize this vision such as Christopher Alexander and leaders in permaculture and community design. Field work will include studying and drawing existing landscapes, and the course will be writing intensive. 2 class hours; 2 laboratory hours
AR 3103 Art Explorations: Theme-Based
There are many modes of making and understanding art in contemporary society. This course offers students the opportunity to engage a specific set of skills and subjects within the broad conversation of studio art. The course subject will change from year to year in response to student and instructor interest. The subjects to be addressed may be: Public Art, Art and Science, Art and the Environment, Scientific Illustration, Printmaking, and others that may occur. This course may be retaken for credit under a different subject. 4 studio hours
Credits: 3
Prerequisites: Sophomore Status
Offered: Semester I
Alternate Years Even

AR 3213 Advanced Drawing
This course builds on the skills developed in Fundamental Drawing continuing to stress both technical skill and individual expression. The emphasis will be on the figure, perspective, and developing a sustained drawing. 4 studio hours
Credits: 3
Prerequisites: AR 1013
Offered: Semester I
Alternate Years Odd

AR 3223 Advanced Sculpture
This course builds on the skills developed in Sculpture. There will be an emphasis on technical skills and conceptual development. 4 studio hours
Credits: 3
Prerequisites: AR 2033
Offered: Semester II
Alternate Years Odd

AR 4003 Apprenticeship
This experiential course of study places the advanced art student in an independent course of study and exploration with a local artist or arts organization. Students will be expected to actively engage their mentors and seek to develop a coherent body of artwork or other work. This course fulfills the internship requirement in the Environmental Citizen curriculum. Hours dependent on individual
Credits: 3
Prerequisites: Consent; Successful Portfolio Defense
Offered: by Arrangement

AR 4013 Senior Exhibition
This course is intended to be the capstone achievement for Art and Environments majors. Senior majors will produce a cohesive body of artwork to be exhibited in a senior show. Hours dependent on individual
Credits: 3
Prerequisites: Consent; Successful Portfolio Defense
Offered: by Arrangement

Biology
BI 1114 Biology: Diversity of Life
Skills and foundational knowledge in this course prepare students to be knowledgeable citizens of a planet with numerous environmental challenges, most of which are based in biology. Students will engage in scientific inquiry, gain a clear sense of the nature and process of science, use quantitative information, develop professional communication skills, and appreciate the role of natural history in science. Topics will include the study of DNA and inheritance, the evolution of life, systematics and classification, matter and energy transfer through ecosystems, and ecological connections made relevant through the study of current environmental issues. 3 class hours; 2 laboratory hours
Credits: 4
Prerequisites: CM 1003, LR 1123 or concurrent enrollment for both
Offered: Semesters I and II

BI 1164 Honors Biology: Diversity of Life
Honors Biology will involve reading of primary and secondary literature, student-led discussions of current issues in biology, and critical writing on biological issues examined from multiple perspectives. Students will engage in
scientific inquiry, gain a clear sense of the nature and process of science, use quantitative information, develop professional communication skills, and appreciate the role of natural history in science. Topics will include the study of DNA and inheritance, the evolution of life, systematics and classification, matter and energy transfer through ecosystems, and ecological connections, made relevant through the study of current environmental issues. 3 class hours; 3 laboratory hours
Credits: 4  
Prerequisites: CM 1003, LR 1123 or concurrent enrollment for both, enrollment in the Honors Program, or consent

BI 1213 Biology in Practice: Theme-Based
Through in-depth study of an engaging biology topic, students will develop information literacy skills: finding, reading, and evaluating scientific literature. This writing-intensive course gives students practice with scientific writing and other forms of professional communication such as oral presentations, posters, or illustration. The course also provides an important forum to discuss professionalism, ethics, current trends, and career directions in science. Researching job opportunities will help make students aware of the knowledge, skills, and dispositions needed for their desired careers. Students will start their professional portfolio and make a plan through curricular and co-curricular means, to gain necessary knowledge, skills, and dispositions. This course may be repeated for credit if taken with a different theme. Hours dependent on theme
Credits: 3  
Offered: Semesters I and II
Prerequisites: BI 1114

BI 2004 Population and Community Ecology
This course will provide an overview of modern ecology: the patterns and processes operating in populations and communities. The first part of the course will focus on demographic characteristics of populations and simple models of population growth and natural regulation. The second part of the course will concentrate on discussions of community structure. Topics include competition, predation, species diversity, niches, and succession. In the lab, students will practice quantitative methods, field techniques, and conduct independent research projects. 3 class hours; 2 laboratory hours
Credits: 4  
Offered: Semester I
Prerequisites: BI 1114, MA 2243 or concurrent enrollment

BI 2033 Marine Biology
Marine Biology is the study of life in the sea. This course emphasizes the nature of the ocean environment, the origin and development of life in the sea, principles of productivity, benthic and pelagic life forms, and food from the sea. Laboratories offer a comprehensive introduction to marine ecosystems and ecological relationships and include both field and lab work. Groups covered include plankton, algae and seaweeds, invertebrates, fishes, seabirds, and marine mammals. Field trips to rock shores, salt marshes, and other coastal sites are included. One weekend field trip is required. 2 class hours; 3 laboratory hours
Credits: 3  
Offered: Semester I
Prerequisites: BI 1114

BI 2043 Dendrology
Dendrology is the study of trees and other woody plants. Trees currently face rapid environmental change—from new herbivores and pathogens to changes in precipitation, air temperature, and soil chemistry. In this course students will learn how trees are adapted to the ecosystems in which they grow, and how changes in their environment may affect them. Throughout this course students will examine the natural history, ecological relationships, and identification characteristics of species within the major tree and shrub families found in New England. 2 class hours; 2 laboratory hours
Credits: 3  
Offered: Semester I
Prerequisites: None

BI 2053 Systematic Botany
This course explores the principles of identification and nomenclature of nonvascular and vascular plants. We will survey the plant families including their geographical distribution and evolutionary history. Laboratory sessions will emphasize the identification of flowering plants of the northeastern United States. A herbarium specimen collection will be required of each student. 2 class hours; 2 laboratory hours
BI 2111 Themes in Fisheries and Aquaculture
This course will examine themes in fisheries and aquaculture. Students may study identification, distribution, ecology, and behavior about aquatic organisms. Individual options will be offered periodically or at student request and faculty incentive. Examples of themes may include; fisheries identification, marine algae, zooplankton, etc. This course may be repeated for credit, providing the topic is not repeated. For each offering, supplementary course descriptions detailing the topic offered by individual instructors will be published in the course schedule. 3 class hours
Credits: 3
Prerequisites: BI 1114
Offered: Semester I
Alternate Years Even

BI 2304 Cell Biology
Cells are the fundamental unit of life. Understanding how an organism functions begins with understanding how a cell functions. In Cell Biology we emphasize the structure and function of eukaryotic cells including their membranes, organelles, and cytoskeleton. We also investigate the cellular processes necessary for life, including metabolism, inter- and intra-cellular communication, protein synthesis, cellular reproduction, and what happens to cells and organisms when these processes are interrupted. The lab component of the course will involve both observational and experimental labs, including microscopy, molecular biology, spectrophotometry, and other methods needed for exploring cell structure and function. 3 class hours; 2.5 laboratory hours
Credits: 4
Prerequisites: BI 1114, CH 1104
Offered: Semesters I and II

BI 3063 Agroecology
All agricultural systems are ecosystems, and their management is fundamentally an ecological activity. This course will introduce students to the science of ecology as applied to agricultural systems, and train students to use ecological concepts as guiding principles in designing and managing agricultural systems. The course will have both lecture and laboratory components. 2 class hours; 2 laboratory hours
Credits: 3
Prerequisites: BI 1114
Offered: Semester I
Alternate Years Odd

BI 3173 Animal Behavior
This course deals with the study of genetics, physiology, and ecology of animal behavior in an evolutionary context. Behavioral adaptations are discussed with particular reference to their ecological significance. 3 class hours
Credits: 3
Prerequisites: BI 1114
Offered: Semester II
Alternate Years Odd

BI 3204 Comparative Animal Physiology
By comparing different animals and how they function in different environments you will develop an understanding of the underlying principles of physiology. You will investigate such physiological processes as digestion, respiration, circulation, muscle and nerve function, ion regulation, and energetics. You will also determine how these processes are specialized in different animals. The lab component of the course gives students the opportunity to observe and collect data on a variety of organisms by conducting experiments that illustrate how physiology can be influenced by stimuli in the environment. Dissections and the use of living animals are required. 3 class hours; 2.5 laboratory hours
Credits: 4
Prerequisites: BI 2304
Offered: Semester II

BI 3214 Biology of Plants
This course is an introductory survey of the structure and function of plants. The primary goal of this course is to present fundamental principles, current topics, and methodology of the plant biological sciences. Students will gain an introductory to intermediate level of knowledge of plant morphology, anatomy, physiological processes, evolution, and ecology. The secondary goal is for students to develop skills to question, hypothesize, test, and evaluate the living world. This course will combine lectures, guided laboratories, student developed research
projects, class discussions, and data collection. Topics will include carbon balance (photosynthesis and respiration), water relations, mineral nutrition, growth and reproductive processes, as well as responses to environmental stress or population. The labs will include experiments on photosynthesis, respiration, germination, hormonal responses, and observations of plant growth under different environmental conditions. Upon completion of this course students will have a broader understanding of the relevance of plants to issues such as global climate change, habitat degradation, impacts of invasive species, and maintenance of ecosystem services. 3 class hours; 2 laboratory hours
Credits: 4 
Offered: Semester II
Prerequisites: BI 1114

**BI 3233 Ichthyology**
Ichthyology deals with identification, histology, meristics and morphology, physiology, and ecology of freshwater and marine fish. Structure, function, evolution, and behavior of fish are all discussed in the framework of adaptation to the environment. Laboratories offer the opportunity to examine fish morphology and behavior in a haptic learning environment. 2 class hours; 2 laboratory hours
Credits: 3 
Offered: Semester II
Prerequisites: BI 2304 or Junior Status

**BI 3253 Invertebrate Zoology**
In this course, the diversity of invertebrate groups will be examined and the evolutionary trends, which they illustrate, investigated. Highlighted groups will include sponges, annelids, mollusks, arthropods, and echinoderms. Patterns in the development, ecology and evolution of these organisms will be investigated. Labs will focus on understanding structure, function, taxonomy, and evolutionary relationships among the groups using both live and preserved specimens. 2 class hours; 2 laboratory hours
Credits: 3 
Offered: Semester II
Prerequisites: BI 1114 and Sophomore Status

**BI 3263 Special Topics in Biology: Theme-Based**
This course will examine themes in biology. Students may study natural history, ecology, geology, or plant and animal adaptations of different habitats, or focus on the biology of a specific taxonomic group. Examples include courses in Desert Ecology, Herpetology, Winter Ecology, Entomology, Alpine Ecology, Tropical Biology, Advanced Cellular Techniques, Molecular Techniques, or Biodiversity. This course will involve extensive reading and writing activities, and may involve mandatory field trips to the habitat under study. This course may be repeated for credit provided the topic is not repeated. For each offering, supplementary course descriptions detailing the topic offered by individual instructors will be published in the course schedule. Hours dependent on theme
Credits: 3  
Offered: Semester I or II
Prerequisites: BI 1114 and others as dictated by theme

**BI 3273 Mammalogy**
This course examines the anatomy, physiology, behavior, and ecology of mammals with emphasis on the adaptability of each feature. Classification and field/laboratory experimentation are stressed in laboratory. 2 class hours; 2 laboratory hours
Credits: 3 
Offered: Semester I
Prerequisites: BI 1114 and Junior Status

**BI 3283 Ornithology**
Birds and their adaptations have intrigued humans throughout history. This course focuses on the physiological, structural, and ecological adaptations that have allowed birds to be successful in their various environments. Time is devoted to avian evolution, reproduction, physiology, migration, and ecology. Students are exposed to scientific studies of birds through professional journals. The laboratory covers visual identification of regional species, anatomy, and trapping and banding methods. Dissections are a required lab activity. 2 class hours; 2 laboratory hours
Credits: 3 
Offered: Semester II
Prerequisites: BI 1114 and Junior Status

**BI 3293 Entomology**
This course is an introduction to the study of insects. Topics may include diversity of form, function, ecology, and...
behavior; the basics of systematic entomology, especially phylogeny, classification, evolution, and biogeography; the role of insects in natural systems; their effects on human welfare; and the methods by which humans attempt to manage insect populations. Laboratory will include field collecting techniques, preservation, and identification. 2 class hours; 2 laboratory hours
Credits: 3 Offered: Semester I
Prerequisites: BI 1114 Alternate Years Even

BI 3323 Conservation Biology
Conservation Biology focuses on the biological and human dimensions of protecting biodiversity globally. The course investigates the value of biodiversity, threats to biodiversity, and practical approaches for conservation of ecosystem diversity, species diversity, and genetic diversity within species. Conservation Biology stresses management of ecosystems and habitats to carry out population conservation. Specific concepts include Tragedy of the Commons, minimum viable populations, extinction patterns, habitat fragmentation, and prioritizing conservation areas. The lab component of the course includes population modeling, design of nature reserves, wetland delineation, introduction to GIS, and 2-3 field trips requiring extended time. 2 class hours; 2 laboratory hours
Credits: 3 Offered: Semester II
Prerequisites: BI 2004

BI 3423 Evolution and Population Genetics
Students will explore the frequencies and distribution of alleles, genotypes, and haplotypes in populations in order to understand the forces that produce, maintain, and eliminate genetic variation through time. Genetic changes in populations are the basis for all evolution and thus play an important role in the ecology and conservation of populations and species. This course will reinforce the role of population and evolutionary principles in developing strategies for conservation of generic diversity. 3 class hours
Credits: 3 Offered: Semester II
Prerequisites: BI 2004 and Junior Status

BI 3654 Microbiology
Microorganisms are a vital, but mostly unseen, component of the environment in which we live. They cause most of the serious diseases of higher organisms and are primarily responsible for the recycling of dead organic material into basic chemical components that can be reused by subsequent generations. Since microorganisms can only be seen and handled in special ways, emphasis is placed not only on their life histories and peculiarities, but also upon methods of observing and handling them. The roles of microorganisms in disease, nutrient cycling, food products, and environmental testing and industry will be explored. Students will practice techniques related to microscopy, cell staining and cell culturing in the lab, as well as experiment with the ecological role of microorganisms. 2 class hours; 2 lecture hours
Credits: 4 Offered: Semester I
Prerequisites: BI 2304, CH 1104 Alternate Years Even

BI 4013 Marine Ecology
In this advanced course, material covered in BI 2033 Marine Biology, BI 3253 Invertebrate Zoology, and ES 3013 Oceanography will be synthesized to allow us to understand the ecological relationships of marine organisms within their environment. Students are immersed in a new environment and will apply their accumulated knowledge of marine ecosystems, organisms, and evolution. This course fulfills the academic field experience required in the disciplinary core of courses. Three-week field work experience
Credits: 3 Offered: May Session
Prerequisites: BI 2033, Junior Status, SCUBA Certification
Fee: $1500 - $2000

BI 4243 Genetics and Molecular Biology
Genetics is the science that examines how genes are transmitted, expressed, and studied. Emphasis in this course is placed upon higher organisms. Mendelian genetics is reviewed along with such modifications as linkage, sex linkage, and modified dominance interactions. Focus is placed on the molecular basis of inheritance, including gene expression and regulation. Current relevant molecular techniques are learned and applied in the lab, including DNA extraction, gel electrophoresis, restriction enzymes, and PCR. 2 class hours; 3 laboratory hours

Unity College Catalog 2013-2014
BI 4323 Marine Macrovertebrate Biology: Theme-Based
In this themed course, the biology of whales, sea turtles, dolphins, sharks, and other marine macro vertebrates may be covered. Topics will include their physiological adaptations to marine life and their ecological role(s) within their ecosystems. This course may be repeated for credit with a different topic. 3 class hours
Credits: 3
Prerequisites: BI 2304, CH 1104, Junior Status
Offered: Semester II
Alternate Years Even

BI 4423 Ecosystem Ecology
This course examines the control and function of the Earth’s global biogeochemical cycles, drawing from the biological, geological, and chemical sciences. We will explicitly address aquatic and terrestrial ecosystems and consider current and future anthropogenic perturbations to ecosystem processes. Topics to be addressed include global and regional carbon cycles, nutrient cycling, decomposition, trophic dynamics, and trace gas fluxes. The history, theories, and utility of the ecosystem concept will be explored. Attention will also be paid to current topics in the ecosystem sciences (specific topics TBD; examples from recent years include heterogeneity, urban ecology, ecological stoichiometry, use of stable isotopes, and response of ecosystems to stress and disturbance, and effects of invasive species). 3 class hours; 3 laboratory hours
Credits: 3
Prerequisites: BI 2033
Offered: Semester II
Alternate Years Even

BI 4702 Biodiversity Capstone
This course brings senior students in the biology programs together to synthesize information through critical reading and discussion of research papers, using foundational knowledge from their coursework. In addition, students will gain experience in communicating science to the broader public. As a culmination of their science curriculum, students will complete a professional portfolio to aid in searches for employment or application to graduate school. 2 class hours
Credits: 2
Prerequisites: BI 2004 and Junior Status
Offered: Semester I
Alternate Years Odd

Chemistry
CH 1104 General Chemistry I
This first part of a two-semester course is designed to provide an introduction to the nature and properties of matter at the atomic and molecular level. Topics covered will include chemical problem solving, measurement, significant figures, components of matter, aqueous solutions, origin of atoms, structure of atoms, structure and reactivity of molecules, and chemical reactions. 3 class hours; 2 lecture hours
Credits: 4
Prerequisites: MA 1223 or concurrent enrollment
Offered: Semesters I and II

CH 1114 General Chemistry II
The second part of a two-semester course is designed to provide an introduction to the nature and properties of matter at the atomic and molecular level. Topics covered will include thermodynamics (enthalpy and entropy), chemical equilibrium, acid-base chemistry, electrochemistry, ideal gases, and chemical kinetics. 3 class hours; 2 lecture hours
Credits: 4
Prerequisites: CH 1104
Offered: Semester II

CH 2324 Organic Chemistry
This class focuses on the diverse chemistry of carbon compounds, with emphasis on those of importance in the biological and environmental sciences. The laboratory will consist of the synthesis and characterization of a wide variety of organic compounds. 3 lecture hours; 3 laboratory hours
Credits: 4
Prerequisites: CH 1114
Offered: Semester II
Alternate Years Odd
CH 4034 Biochemistry
Biochemistry represents a bridge between chemistry and biology, investigating and explaining the chemistry that gives rise to the living state. Biochemical processes control the flow of energy, information, and materials within organisms. Topics covered in this course include the structure and function of biological molecules, bioenergetics, metabolic pathways, enzymology, and cell signaling. These topics can be understood in the context of current issues in biology including toxicology, immune system function, nutrition, and disease. The lab component will involve using basic techniques from biochemistry and the related subject of molecular biology to better understand how biochemical processes are investigated, how they occur, and how they are regulated. 3 class hours; 3 laboratory hours
Credits: 4
Prerequisites: BI 2304, CH 1104 and Junior Status
Offered: Semester II
Alternate Years Even

CH 4044 Environmental Chemistry
This environmental chemistry class discusses fundamental chemical concepts as they relate to environmental issues. The laboratory portion will include a major project related to topics in aqueous chemistry, atmospheric chemistry, geochemistry, and/or solid and hazard waste chemistry. 3 class hours; 2 laboratory hours
Credits: 4
Prerequisites: CH 1114, BI 1114, GL 2003 or GL 1003, and Junior Status
Alternative Years Odd

Communications
CM 1003 Composition and Communication I
This class uses an inquiry-based approach to engage students in questions about what makes successful communication. Students learn a range of strategies for active reading, active listening, and multimedia composition. They will create print, verbal, and digital texts in a workshop setting with an emphasis on informing public audiences. 3 class hours
Credits: 3
Offered: Semesters I and II
Prerequisites: None

CM 1013 Composition and Communication II
These theme-based classes guide students through the process of inquiry-based research. In a workshop setting, students learn to craft research questions, find and evaluate sources via the Internet and the library, and create persuasive print and digital texts. 3 class hours
Credits: 3
Offered: Semesters I and II
Prerequisites: CM 1003 with a grade of a C or above or CM 1003 with a D and concurrent enrollment in LR 1001

CM 1063 Honors Composition and Communication I
This class uses an inquiry-based approach to engage students in questions about what makes successful communication. Students learn a range of strategies for active reading, active listening and multimedia composition. They create print, verbal, and digital texts in a workshop setting with an emphasis on informing public audiences. In this Honors section, students will read challenging texts, write in a range of genres, and speak for a variety of audiences in order to come to a more complex understanding of the choices available to them as thinkers, writers, and speakers. 3 class hours
Credits: 3
Offered: Semester I
Prerequisites: Enrollment in the Honors Program

CM 1163 Honors Composition and Communication II
These theme-based classes guide students through the process of inquiry-based research. In a workshop setting, students learn to craft research questions; find and evaluate sources via the Internet and the library, and create persuasive print and digital texts. In this Honors section, students will continue to build their skills in comprehension and communication of complex ideas by mastering discipline-specific conventions and organizational strategies. 3 class hours
Credits: 3
Offered: Semester II
Prerequisites: CM 1063 and Enrollment in the Honors Program; or CM 1003 and consent
CM 2013 Interpersonal Relations
This course introduces problem encounters with the public and prepares the student for situations which occur in dealing with people. Particular emphasis will be put on learning to listen, problem solving, and maintaining control at all times. This will be accomplished through studying and discussing cases that present situations which may be encountered in the field. Role playing will be a required part of class participation. 3 class hours
Credits: 3
Offered: Semester I
Prerequisites: CM 1003 or PR 1023

CM 2123 Environmental Communication
From Aldo Leopold to Al Gore—how humans think, talk about, and represent nature has had an impact on policy-making, natural resource management, and the place that nature has in our day-to-day lives. In this course students explore how people (including themselves) think about the environment, how that is used (and used against them) by advertisers, policy-makers, and opinion leaders, and how responsible environmental citizens can join (or resist) the effort to manage public opinion about the environment. Topics include environmental rhetoric, media and journalism, public participation in environmental decision making, social marketing and advocacy, and nature in popular culture and green marketing. This is a community-based service-learning course. 3 class hours
Credits: 3
Offered: Semester II
Prerequisites: CM 1013

CM 2233 Digital Media Production
This class is designed to give students the knowledge and skills to build well designed web sites and to understand when (and how) best to use digital media to convey a powerful message. The course will cover best practices for presenting web content, balancing artistic and technological skills to create web pages that are conceptually interesting, easily navigable, visually pleasing, and functional. The course also introduces you to the hardware and software basics of audio, video, and image capture, editing, production, and will provide experience with online media distribution tools. 3 class hours
Credits: 3
Offered: Semester II
Prerequisites: None
Alternate Years Even

CM 3113 Documentary Film
From "Nanook of the North" to "An Inconvenient Truth" documentary film makers have struggled to balance fact with craft in this increasingly relevant medium. Students will get a crash course in documentary film in preparation for the Camden International Film Festival early in the semester. Students will then plan, pitch, and work in teams to produce a documentary film. Students will gain experience in documentary planning, filming, interviewing, camera technique, video-editing, narrative development, and post-production. This course requires attendance at the Camden International Film Festival. This course has an associated course fee. 4 studio hours
Credits: 3
Offered: Semester I
Prerequisites: CM 1013
Fee: $75

CM 3123 New Media
Do you dream of running your own business, advocating for an environmental cause, or establishing yourself as a prominent voice in the field of environmental studies or publishing? If so, then this course is for you. Throughout the semester we’ll examine the ways that tools such as Facebook, Twitter, YouTube, and blogs are changing the face of human interaction. We’ll work to build digital platforms and use social network sites as a basis for creating readership and a community of supporters. Along the way, you’ll have the opportunity to apply these examinations to a cause of your own choosing. Whether it’s raising awareness about local food, finding clients for your new guiding business, or getting an unpublished book of poetry out into the reading public, this course will give you the tools you need to communicate in the digital age. 3 class hours
Credits: 3
Offered: Semester I
Prerequisites: CM 1013
Alternate Years Even

CM 3333 Environmental Journalism
Ours is a time of environmental concern, but also commonly referred to as the “information age.” Most people get their information about the environment from the news media, whether in print, online, or on television. This class
will grant participants an opportunity to grapple with both the techniques and issues involved in environmental journalism. Students will read and write real-world environmentally focused newspaper, newsletter, or magazine articles. Students will write for Northern Lights Online and The Unity Magazine. 3 class hours  
Credits: 3  
Offered: Semester II  
Alternate Years Odd  

Conservation Law Enforcement  

CL 1003 Introduction to Criminal Justice  
This course provides an introduction to the components and processes of the criminal justice system in the United States. Topics include the history, structure, function, and philosophy of our system of justice and how it integrates into everyday life in our society. Students will discuss our justice system’s historic English roots, the evolution of American law, and a variety of law enforcement agencies, including their distinctive operational characteristics. Particular attention will be given to conservation officers and their specialized role in resource protection. 3 class hours  
Credits: 3  
Offered: Semester II  

CL 1013 Introduction to Conservation Law Enforcement  
This course provides students with an overview of the conservation law enforcement profession. The dual role of the modern conservation officer as law enforcement officer and protector of our natural resources is stressed. A wide variety of professional roles are examined including game warden, park ranger, marine warden, and forest ranger. The future importance to the conservation officer of community and public relations, toxic waste regulations, and recreational vehicle safety are also discussed. Laboratory sessions focus on applied skills such as hunter safety, map and compass use, outdoor survival, and search and rescue. 2 class hours; 2 laboratory hours  
Credits: 3  
Offered: Semester I  

CL 2001 Firearms Training  
This course covers the handling, use, and maintenance of firearms by law enforcement officers. Loading techniques, cleaning methods, and inspection procedures of service weapons used by law enforcement agencies will also be covered. Students will receive range experience and qualify on a police firing range (using State of Maine standard) with each weapon. Firearm safety will be stressed throughout the course along with State of Maine laws on liability, personal responsibility, gun control, concealed weapons, and self-defense. 2 hours combination of class and laboratory  
Credits: 1  
Offered: Semesters I and II  

CL 2033 Marine Law Enforcement  
This course covers the history, evolution, principles, and contemporary application of marine law enforcement operations including specialized federal and state agencies. Topics include sources of substantive law, classification of crimes, parties to crime, elements of crime, matters of criminal responsibility, commercial and recreational violation, environmental issues, and other related topics. Upon completion, students should be able to discuss the sources of law and identify, interpret, and apply the appropriate statutes, codes, and elements. 3 class hours  
Credits: 3  
Offered: Semester I  
Alternate Years Odd  

CL 2113 Wildlife Law Enforcement  
This course covers the history, evolution, principles, and contemporary applications of state and federal wildlife law, with a focus on enforcement by conservation law enforcement agencies. Students will learn how to interpret and apply the substantive law, as well as understand how criminal, procedural or constitutional law applies in the conservation law enforcement context. The class will also cover the classification of crimes, parties to crime, elements of crimes, the principles of criminal responsibility, recreational violations, environmental issues, illegal trade, and other related topics. Upon completion, students should be able to discuss the sources of law and identity, interpret, and apply the appropriate statutes, codes and elements. 3 class hours
CL 2123 Community Relations and Ethics
This course will cover necessary cooperation and interaction that occurs between various law enforcement agencies and communities or populations they serve giving special consideration to customs, race, gender, and unique circumstances. In addition, students will consider ethical and accepted standards found within various enforcement organizations. Topics include ethical decision making, social change, sub-cultures, values and norms, cultural diversity, citizen involvement in justice issues, and other related topics. Upon completion, students should be able to apply ethical considerations to the decision making process in various law enforcement situations. 3 class hours

Credits: 3                    Offered: Semester I
Prerequisites: CL 1003 and Sophomore Status

CL 3013 Courtroom Procedure and Evidence
This class introduces students to the judicial system and the adjudicatory process, from incident to disposition. The class addresses all aspects of the issue of the admissibility of evidence, from the formal rules of evidence to the constitutional limitations governing admissibility. Students will learn the steps in a trial, the types of evidence that may be introduced, methods of authenticating evidence, the hearsay rule and its many exceptions, the concept of privilege, and the exclusionary rule, with special emphasis on the requirements of the Fourth, Fifth, and Sixth Amendments. Upon completion students should understand what is required to ensure that evidence collected will be admissible in court, including procedures necessary to affect a lawful arrest and search, and to establish a proper chain of custody. Students will also have an understanding of the rules of evidence sufficient to help them to present evidence in court in an efficient and effective manner. 3 class hours

Credits: 3                    Offered: Semester II
Prerequisites: Sophomore Status

CL 3113 Environmental Enforcement
Federal, state, and local governments pass laws to protect natural resources and the environment, but these laws mean nothing without compliance. This does not happen automatically but is the result of efforts by the government to encourage and compel such compliance. In this class students will discuss those various efforts and the essential role the enforcement officer plays in making those efforts a success. After taking this class, students will be familiar with the policy and legal issues raised by environmental enforcement, as well as practical issues faced by the enforcement, and the separate procedures involved in each. Students will also know the basics of how to do a regulatory inspection and how to write an investigative report. 3 class hours

Credits: 3                    Offered: Semester I
Prerequisites: CL 1003 and Sophomore Status

CL 3224 Crime Scene and Investigative Techniques
This course covers the basic and special techniques employed in criminal investigations and investigative interviews and interrogation, including interpretation of verbal and physical behavior and legal perspectives. In addition, this course introduces the theories and fundamentals of the investigative process. Topics include hands-on forensic laboratory work, crime scene/incident processing, information gathering techniques, collection/preservation of evidence, preparation of appropriate reports, and other related areas. Upon completion students should be able to identify, explain, and demonstrate the techniques of the investigative process, report preparation, and courtroom presentation. 2 class hours; 1 laboratory hour

Credits: 4                                                                                                    Offered: Semester II
Prerequisites: CL 3013 and Sophomore Status

CL 4503 Conservation Law Capstone
This course will provide an opportunity for students to apply the knowledge and skills they have learned in the previous courses to a series of cases involving conservation law enforcement operations. The course will emphasize real-life problem solving strategies and incident management. Operating alone and in teams, students will draw upon a wide range of subjects applying knowledge rooted in wildlife management, administration, communications, investigative sciences, and broad-based concepts of environmental stewardship to make oral and written presentations. Upon completion of the course, students will have the confidence and ability to resolve
Economics
EC 2003 Economics of Resource Conservation and Sustainability
This course introduces students to the problem of sustainability through the viewpoint of economics. Topics include the history of economic thought, the contemplation of sustainability thinking as an ethical proposition, the tradition of sustained yield management and its application through land management policy, the tradition of Coasian environmental economics and its application through pollution control policy, the emerging concern of ecological economics and its application through policy attempts to control climate change, reform energy production, and stem biodiversity loss. No prior economic training is required. 3 class hours
Credits: 3
Offered: Semester II
Prerequisites: None
Alternate Years Even

EC 2013 Introduction to Economics and Economic Criticism
This course examines the basic principles of neo-classical economics. It includes supply-demand theory, consumer choice theory, and theory of the firm. Macroeconomic and trade theories are also introduced. In each case students briefly examine the major alternate points of view. Students solve basic problems and perform calculations using the theories learned. 3 class hours
Credits: 3
Offered: Semester I
Prerequisites: MA 1223 or MA 2243

Education
ED 1010 Educational Field Lab
Students enrolled in any education course are required to complete a set number of field experience hours. The observations are integral to learning and allow students an opportunity to connect classroom theory to practical application. Students will concurrently enroll in an ED course or PY 3123 and a lab one time per week for each registered ED or PY 3123 course. Observations will be assigned through the Teacher Education Program office. 2 class hours
Credits: 0
Offered: Semesters I and II
Prerequisites: Co-requisites: ED 1013, ED 2113, ED 2102, ED 2212, ED 3122, ED 3333, ED 3443, PY 3123

ED 1013 Foundations of Education
This course is an overview of the various ways of educating within American educational institutions, to include socialization processes. The student will analyze current education practices in terms of history, philosophy, and socio-cultural factors of formal and informal learning. Emphasizes trends, issues, and potential alternatives and requires twelve hours of field experience. 3 class hours
Credits: 3
Offered: Semester I
Prerequisites: Concurrent enrollment in ED 1010

ED 2003 Experiential Theory and Practice
This course serves as an introduction to theory and scholarship review. Content focuses on learning theories and relevant philosophers who have influenced non-traditional education efforts. Models pertinent to adventure education, problem based learning, service, and place-based methods will be explored. Students will apply theory and models through observations and experience in physical, cognitive, and affective methods of instruction, group management, and learning assessment. 3 class hours
Credits: 3
Offered: Semester I
Prerequisites: None

ED 2102 Educational Field Practicum I
Students will participate in 25 hours of field experience in grades 7-12 public school classrooms. Participation will primarily focus on multiple observations, but may also include student tutoring, assisting in science laboratories, and performing research. During the weekly seminar, students will become familiar with Maine’s Ten Initial Teaching Standards and initiate the development of an assessment portfolio required for teacher
ED 2113 Instruction and Assessment Design
This course covers the design, implementation, and assessment of programs. Goals, objectives, instructional design, and formal and informal assessments will be covered. Resources, delivery methods, and delivery media will be explored. Emphasis will be placed on students developing the skills and knowledge necessary to plan and carry out programs. Students will have opportunities to give program presentations. Each student will complete five hours of approved observation of educational programs.  3 class hours
Credits: 3
Offered: Semester I
Prerequisites: Sophomore status and concurrent enrollment in ED 1010

ED 2212 Teaching with Technology
This course will introduce and explore a variety of tools that can be utilized in the classroom to facilitate an engaged learning process. Students will learn to appropriately use a variety of technologies to more effectively promote learning. Six hours of field observation will be required.  2 class hours
Credits: 2
Offered: Semester II
Prerequisites: ED 2113 and concurrent enrollment in ED 1010

ED 3122 Educational Field Practicum II
Students will participate in 25 hours of field experience in grades 7-12 public school science classrooms as lab assistants, researchers, or assistant teachers. They may develop and teach lesson plans and participate in faculty meetings or professional development activities. During the weekly seminar, students will continue to develop their professional portfolio. Students will develop unit plans demonstrating competence in a variety of teaching strategies and knowledge of safe teaching practices. Summative assessment will be conducted through presentation of their portfolio to the Teacher Education Committee.  1 class hour
Credits: 2
Offered: Semesters I, II or by Arrangement
Prerequisites: ED 2102 and concurrent enrollment in ED 1010

ED 3223 Curriculum and Evaluation Design
This course provides the prospective teacher with an overview of theory and research in the field of curricula, plus hands-on experience in curriculum development. ED 3223 includes historical, philosophical, and sociological perspectives on both the explicit and implicit curriculum. Students will develop skills in the use of alternative forms of evaluation. Exploration and guided practice in the processes of writing and evaluating curricula for local school districts is included.  3 class hours
Credits: 3
Offered: Semester II
Prerequisites: ED 2113
Alternate Years Even

ED 3333 Education for Exceptional Children and Youth
This course provides an in-depth examination of both traditional and emerging perspectives in special education. The course content includes characteristics of the exceptional student. Additional topics include learning theories and styles as they relate to exceptional children, classroom and instructional management, classroom modification/accommodation, overview of state and federal laws, and family and support services. The course format is a combination of lecture, guest speakers, group activities, and field experiences. Each student will complete 10 hours of field experience in a setting where exceptional children are learning.  3 class hours
Credits: 3
Offered: Semester II
Prerequisites: PY 1013, Sophomore status and concurrent enrollment in ED 1010

ED 3342 Exceptional and Universal Programs
This course is designed to acquaint students with the skills needed to work with people who have developmental disabilities. Students apply knowledge from ED 3333-Education for Exceptional Children and Youth to the adventure and experiential education field. Students will hone their programmatic understanding as it relates to working with specific populations by designing and implementing small scale programs with regional participants and/or agencies.
Two separate weekends may be scheduled to allow for distinct program application with agencies. 1 class hour; 4 laboratory hours
Credits: 2
Prerequisites: ED 3333 or concurrent enrollment

ED 3443 Teaching Science in the Secondary Schools
This course provides instructional strategies and general approaches to teaching science in grades 7-12. Emphasis is placed on professional literature, curriculum development, teaching and learning styles, and reflective teaching. The course includes science safety issues and practices. Students will complete twelve hours of field experience in secondary schools. 3 class hours
Credits: 3
Prerequisites: BI 1114 or CH 1114, ED 2113, Junior Status and concurrent enrollment in ED 1010

ED 4912 Student Teaching
This internship will be a student teaching experience in an assigned middle or high school classroom. This experience will be full-time for the full semester. The student will have progressive involvement in the middle/high school classroom leading up to assuming complete responsibilities for teaching. The student will have a faculty sponsor and will follow the public school calendar for 15 weeks. The student will present his/her assessment portfolio aligned to Maine’s Ten Initial Teaching Standards prior to the end of the experience. This course fulfills the internship requirement in the disciplinary core of courses.
Credits: 12
Prerequisites: Consent (Secondary Education major; Passing scores on the State of Maine Praxis II exam; Approval from the Teacher Education Committee after initial portfolio presentation)

English

EH 1123 Environmental World Literature: Theme-Based
With an overview of the relationship between nature and culture, this class emphasizes analysis and imagination in global environmental literature. Students will read and write about texts from a range of cultures in multiple media to gain an understanding of diverse environments and literatures. They will create final projects that represent the relationships between nature and culture today. This course may be repeated for credit with a different theme. 3 class hours
Credits: 3
Prerequisites: CM 1013

EH 2213 Introduction to Environmental Writing
From poetry to nonfiction -- from Gary Snyder to Rachel Carson -- environmental writing remains the most widely influential method for advocating on behalf of the environment. This course gives students the opportunity to practice environmental writing and read exemplary works. Students may study and produce environmental fiction, non-fiction, and poetry. Students in this course will write for the Northern Lights Online. 3 class hours
Credits: 3
Prerequisites: CM 1013

EH 3213 Professional and Technical Writing: Theme-Based
This service-learning course prepares students for professional writing in their disciplines by developing skills in writing, editing, graphics, document design, and the management of data and other resources. Students will have the opportunity to learn about the variety of writing demands in various disciplines and occupations. They will also have the opportunity to create a variety of reports, documents, and web pages related their own research and career plans. Course topics may include: science writing, grant and report writing, NGO writing, written communication in business, and writing for the web. This course may be repeated for credit if taken with a different theme. 3 class hours
Credits: 3
Prerequisites: CM 1013

EH 4013 Creative Thesis
The Creative Thesis is a capstone experience that allows you to showcase your skills and abilities as a writer: in
other words, it represents a bridge between your work as an undergraduate student, as a student in a Master of Fine Arts program, or as a professional writer in an environment field. Usually completed during your senior year, this project enables you to create a publishable collection of work in your chosen area of specialty. Perhaps it is a chapbook of poems, a series of feature articles, a memoir, or a digital platform for a local nonprofit. The specific topics and methodology of the project will be determined by you and your two faculty thesis advisors. A written thesis proposal must be approved by your faculty advisor and filed with the registrar; a copy of the final thesis will be deposited in the Dorothy Webb Quimby Library. The senior thesis may be taken at the 4000 level only, for a maximum of three credit hours for each of two semesters. *Hours dependent on individual*

Credits: 3
Prerequisites: Consent

**EH 4213 Writing for Publication**
So you’ve learned what makes a good article or essay; you’ve gone out and done some pretty cool stuff; you think other people might like to know more. What happens next? In this course, we’ll explore different modes of writing for publication, beginning with classic magazine and journal articles, and then advancing to digital and electronic media. This semester will be largely workshop-based and with an emphasis on students sharing their writing and feedback. Throughout the semester, you will also have the opportunity to work as contributing staff on *Hawk & Handsaw: The Journal of Creative Sustainability*. *3 class hours*

Credits: 3
Prerequisites: CM 1013

**Environmental Sciences**

**ES 1003 Introduction to Natural Resources**
This is an introductory course that focuses on careers in parks, forestry, wildlife, fisheries, outdoor recreation/education, and land management professional fields. Discussions of current global, regional and local problems affecting natural professionals as they work toward a sustainable economy will be included. Guest lectures, field trips to work sites, and hands-on lab experiences are planned. *2 class hours; 2 laboratory hours*

Credits: 3
Prerequisites: None

**ES 1031 Introduction to Global Positioning Systems (GPS)**
This 7-week course is designed to provide students with the opportunity to use GPS (Global Positioning Systems) devices for travel, data collection and mapping. As this technology becomes more and more commonplace it is important that students be exposed to the underlying theories and limitations as well as the applications. Collecting data and utilizing appropriate mapping software to produce useable field maps will be incorporated into the content of the course. *1 class hour; 2 laboratory hours*

Credits: 1
Prerequisites: None

**ES 200x Techniques in the Environmental Sciences: Theme-Based**
In this course students learn and apply various field and laboratory techniques used in the environmental science professions. Emphasis is placed on acquiring new skills and putting the skills to practice to improve abilities. Skills may be field-based (e.g. wetland delineation, mist-netting and bird banding), lab-based (e.g. molecular techniques, software applications for analysis) or a mix of field and lab (e.g. sediment coring and analysis, marine polychaete identification). This course may be taken more than once for credit under different topics. *Hours dependent on theme*

Credits: 1 or 2
Prerequisites: As dictated by topic

**ES 2103 Introduction to Geographic Information Systems (GIS)**
This course is designed for students from any discipline who are interested in applying GIS as a tool to help answer important and timely questions about our environment. This course presents the concepts upon which Geographic Information System technology is based including the fundamentals of: Cartography, Geodesy, Coordinate Systems, and Projections. Conceptual overview and hand-on experience of vector data analyses and table queries are introduced. Students will use ArcGIS to classify data, query tables and maps, analyze spatial relationships, set map

Unity College Catalog 2013-2014
projections, build spatial databases, edit data, and create map layouts. Lectures are given weekly, followed by hands-on lab experiences to develop and reinforce methodologies for GIS analyses. **3 class hours**

**ES 2111 Project Assistant: Theme-Based**
By working with faculty on research projects, outreach opportunities, or program initiatives, students gain valuable skills and knowledge in a guided setting. Examples of projects include learning research skills while working with a faculty member on a research project, learning about equipment maintenance and fish husbandry while assisting with the aquaculture facility, or working with a faculty member on the development of new laboratory exercises. A student who wishes to enroll in a Project Assistant credit must consult with the faculty member and complete an agreement form prior to pre-registration. **Hours dependent on individual**

**ES 3013 Oceanography**
Oceanography examines the interplay between the physical, chemical, geographical, and biological processes on the sea. Topics in this course will include plate tectonics, properties of seawater, waves, primary productivity, detrital cycling, and the role of oceanic currents in affecting global climate. **3 class hours**

**ES 3183 Limnology**
Limnology is the study of physical and chemical conditions of lakes and streams. Local lotic and lentic waters will be characterized, compared and contrasted. The physical and chemical components of regional freshwaters will be described by theoretical and conceptual models in lectures. Laboratory exercises will be oriented toward water quality monitoring in the practical application of resource managers. **2 class hours; 3 laboratory hours**

**ES 3213 Applied Geographic Information Systems (GIS)**
Applied GIS is an advanced GIS course where we will explore GIS as a tool to answer questions about our nature and human made environment. The focus of this course will be on the raster data model and ArcGIS Spatial Analyst, including the use of map algebra. Students are asked to complete an independent project with a local organization as part of the requirements of this course. We will cover aspects of technical writing within the framework of GIS project proposals and a final technical report. Students are also asked to complete a professional poster and presentation of their project. **3 class hours**

**ES 4001 Data Collection**
This one-credit offering allows students to collect data in support of a thesis. Students must outline their plans for data collection with their thesis advisor during Senior Thesis I and justify the need for this work to take place prior to registering for the Thesis I. **Hours dependent on individual**

**ES 4003 Senior Thesis I: Project Planning and Design**
Through instructor and peer guidance, students in this course develop a full project proposal for their thesis. Students should come into the course already with some idea for a project and an idea of a thesis advisor. Students will refine their project ideas, conduct a thorough literature review, construct a detailed project plan and timeline, and test data collection protocols. Instruction on project planning and peer evaluation of plans will occur during the seminar part of the course. Students will be given opportunity to work on their individual project plans during the computer lab part of the course. **1.5 class hours; 1.5 computer lab hours**
ES 4013 Senior Thesis II: Data Collection, Analysis, and Presentation
A thesis is a substantial written work that documents and defends a viewpoint or hypothesis relying on the use of rigorous field, lab, or other research. During this course students work mostly independently under the guidance of their thesis advisor to complete data collection and analysis, write and revise their written thesis, and develop and deliver a presentation for a public defense. Students will also meet once a week with other thesis students and faculty to gain and provide feedback on projects. This course may be repeated for credit when planned for through the proposal stage or in instances of extenuating circumstances that require significantly more work than had been expected. 1.5 class hours; other hours dependent on individual
Credits: 3
Offered: Semesters I and II
Prerequisites: ES 4003 or Consent; Minimum cumulative grade point averages of 3.00.

ES 4111 Project Leader: Theme-Based
In Project Leader, students take initiative for projects under the supervision of faculty. Through these leadership roles on research projects, outreach opportunities, or program initiatives, students improve valuable skills and knowledge as well as independence, motivation, and mentorship. A student who wishes to enroll in a Project Leader credit must consult with the faculty member and complete an agreement form prior to pre-registration. Hours dependent on individual
Credits: 1
Offered: Semesters I and II
Prerequisites: Faculty Approval

ES 4501 E.S. Seminar
In this seminar course, a group of students studies a particular topic in environmental sciences at an advanced level and under the guidance of an instructor. Each member of the seminar is responsible for contributing to its success through thorough preparation for, and active participation in seminar meetings. Typically, students may be asked to lead discussions; present to the rest of the group, conduct a literature review on a particular question, or seek out guidance from other faculty at the college. The focus of most seminar offerings will be on critical reading and critical thinking rather than content mastery. 1.5 class hours
Credits: 1
Offered: Semesters I and II
Prerequisites: Junior Status and others as dictated by topic

Forestry
FY 1011 Chainsaw Safety, Maintenance, and Use
The chainsaw is one of the basic tools used for wood harvesting, line clearance, tree work, and camp and trail maintenance work. Because numerous people are killed and injured while operating a saw, it is important that people trained to work in many of the outdoor fields be familiar with the safe and efficient use of a chainsaw. After spending some time viewing safety videos and reviewing operational procedures students will be felling, limbing, and bucking trees as well as learning about some basic maintenance techniques out in the woods. 3 combination class/laboratory hours
Credits: 1
Offered: Semesters I and II
Prerequisites: None

FY 2013 Forest Measurements
Description of tree, log, and stand-level components of forest resources and forest products; log rules and scaling practices; surveying and land description; introduction to summary statistics, as well as remote sensing are covered in this foundational course in field practices. Labs will include application and field practice of forest measurement techniques. Tree, log, and stand-level measurement of forest, forest product, wildlife, and social attributes; statistical computing and sampling methods. 2 class hours; 2 laboratory hours
Credits: 3
Offered: Semester I
Prerequisites: MA 2243
FY 2163 Wildland Fire Science and Management
This course provides students with basic knowledge on how fire impacts forest environments, environment and weather influence fire behavior, wildland fires are suppressed, and fire is used as a land and vegetation management tool. The course will also provide students with the knowledge and training to qualify as a basic wildland firefighter (FFT2-Red Card). Extended laboratory sessions will provide practice in fire behavior prediction, prescribed burning techniques, and fire control methodology. 2 class hours; 2 laboratory hours
Credits: 3  
Offered: Semester II  
Prerequisites: None

FY 3213 Forest Silviculture and Management
The course presents the science used in the management of native forest and plantations, covering forest establishment, composition, growth, and quality to achieve specified objectives. It explores the ‘silvics’ of tree species and their influence on growth and management for the production of forest products, wildlife habitat, recreational, and environmental services. It covers the silvicultural principles and practices important to achieving the range of objectives for forested land such as water, wildlife habitat, or timber production. On completion of this subject, students should have an advanced understanding of: the dynamics and growth of forests and different stages of stand development, the effects of site climatic and edaphic factors and interactions among species on forest stand development and productivity, and the design of silvicultural management practices for specific situations and products using modern modeling tools. Practical applications in Maine’s managed forests will be explored through field trips and community based learning opportunities. 2 class hours; 2 laboratory hours
Credits: 3  
Offered: Semester I  
Prerequisites: MA 2243, FY 2013

FY 4003 Small Woodlot Management
Concepts of forest ecology, resource inventory, cultural practices, and multiple use management for small woodland areas. Working with consultants, contractors, trail design and construction and wildlife habitat management will be featured as well as exploring wood products harvesting, and environmental regulations facing small woodland owners. Other topics will include issues facing small land owners, land trusts, conservation commissions, and other land owners looking to develop sustainable resource management practices on their small scale land holdings. Field trips, guest speakers, and community-based learning will be featured. 2 class hours; 2 laboratory hours
Credits: 3  
Offered: Semester I  
Prerequisites: Junior Status

Gender Studies
GS 1023 Introduction to Gender Studies
This course offers a brief glimpse into the lives and histories of women in the modern Western world. Students will read writings by and about women, paying particular attention to depictions of women in pop culture, biology vs. gender, and cultural otherness. Throughout the semester, special attention will be given to understanding the development of the women’s movement, the rich and varied experiences of women from different ethnic backgrounds, and personal reflection on our own experiences and histories. Students may be expected to complete a service project for this course. 3 class hours
Credits: 3  
Offered: Semester II  
Alternate Years Even  
Prerequisites: None

Geography
GY 1003 Geography
Geography describes, relates, and explains both the natural and cultural features that distinguish different areas on the face of the earth. At the same time geography is concerned with the phenomena of continual change: the ways people modify their environments as reflections of changes in cultural values and levels of technology; and the ways the physical environment presents opportunities and constraints for human development. 3 class hours
Credits: 3  
Offered: Semester I  
Alternate Years Even  
Prerequisites: None
Geology

**GL 1003 Physical Geology**
Physical Geology is the gateway course to the geosciences and serves to introduce students to the fundamental components of the Earth-Atmosphere system. Our exploration into the field of geology begins with some basic principles and mapping, and rapidly shifts into hard-rock geology (igneous, sedimentary, and metamorphic rocks), composition of Earth materials, and soils. From there, we move into a water-related section of the course covering stream processes and other surficial waters, groundwater, and glaciers. We conclude with a section on plate tectonics, structural geology, natural hazards, and volcanoes. The geosciences is a discipline that emphasizes observation and visualization, hence, lectures are riddled with images of the landscape, animations, and schematics to aid in understanding the physical environment. Labs serve as a critical complement to course material by providing hands-on exercises, opportunities for first-hand visualization, and other applied learning activities. A lot of the geosciences rely heavily upon observation of the natural environment, and many of our labs include fieldtrips to do just that. Students should possess basic reading, comprehension, and computation skills in order to successfully complete this course and its lab components.

2 class hours; 2 laboratory hours

Credits: 3

Offered: Semester I

Prerequisites: None

**GL 1013 Weather and Climate**
Spatial and temporal variability of weather events and climate patterns influence all components of the environmental system – from soils and vegetation to water resources and landform development, and of course human activities. That said; a thorough analysis of the atmosphere is critical if one is to comprehend how and why weather events change from day-to-day and climate systems shift. Topics discussed will include: air masses, air pressure, temperature variability, precipitation, weather map analysis and interpretation, and severe weather (e.g. tornadoes and hurricanes). Furthermore, these analyses of weather at short timescales can be easily extended to understand how and why climate patterns change over a variety of timescales from decade to decade, millennia to millennia, and everything in between. We will examine the mechanisms that drive climate to change; study past, present, and future climates, and see how climate change research is conducted. In this course, students will examine a variety of atmospheric science topics over a broad spectrum of spatial and temporal scales via lectures, hands-on exercises, mapping, data analysis, computer modeling, and fieldwork. Students should possess basic reading, comprehension, and computation skills in order to successfully complete this course and its lab components.

2 class hours; 2 laboratory hours

Credits: 3

Offered: Semester II

Prerequisites: None

Alternate Years Odd

**GL 2003 Geology of Environmental Problems**
The physical landscape exerts a strong control on human activity – whether it be glacial history and soils influencing agriculture or drinking water supplies, a city devastated by an earthquake or some other natural hazard, human inquiry into past environments, flooding, erosion, and more. In certain situations, humans influence the physical environment and our analysis of these physical environment-human interactions will occur at several different spatial and temporal scales. For example, we will examine soils from Unity, Maine and tectonic activity from the western United States. Natural hazards can occur in the blink of an eye, whereas groundwater contamination can happen over a period of several years, and archives of environmental change are recorded over several thousand years. Laboratories are designed to complement lecture material and will focus on applied learning topics such as physical analyses of soils, mapping exercises, photo and map interpretation, quantitative analysis of surface and groundwater, and field surveys. Students should possess basic reading, comprehension, and computation skills in order to successfully complete this course and its lab components.

2 class hours; 2 laboratory hours

Credits: 3

Offered: Semester II

Prerequisites: None

Alternate Years Odd

**GL 3044 Surface and Groundwater Hydrology**
Water – without it, life is impossible! This course systematically covers the role of water in Earth systems with emphasis on surface water and groundwater. The course relies heavily on computer modeling and quantitative analysis of hydrologic data recorded by students and presented in data sets. Our focus will begin with the hydrologic cycle and we will explore the pathways water molecules travel through Earth Systems. Next, we will begin breaking the hydrologic cycle down into its constituent parts for further analysis including precipitation, surface runoff and...
erosion, infiltration and groundwater, human impacts on hydrology, evapotranspiration, and much more. In lab you will learn how to collect and analyze hydrologic data and use computer models to simulate various elements of the hydrologic cycle. Special attention is given to topics that influence the movement of water on and below the surface. This course requires extensive field work conducted mostly during class time. Students should possess strong reading, comprehension, and computation skills in order to successfully complete this course and its lab components. 3 class hours; 3 laboratory hours
Credits: 4                      Offered: Semester I
Prerequisites: MA 1223, CH 1104, GL 1003 or GL 2003  Alternate Years Even

GL 3223 Geomorphology
Geomorphology, or the study of landforms and the processes that create them, is a broad discipline that includes examination of fluvial systems, glacial systems, soil systems, eolian systems, and coastal systems. This course introduces students to a variety of geomorphic systems in and around central Maine through abundant field trips. Students will spend time in lecture learning about the theoretical aspects of geomorphology and expand upon this knowledge with first-hand experiences that will include field observation and field analysis of major landform types. 1 class hour; 4 laboratory hours
Credits: 3                      Offered: Semester I
Prerequisites: GL 1003 or GL 2003  Alternative Years Odd

GL 3433 Soil Science: Principles and Applications
This course covers numerous topics related to soils beginning with the fundamentals including field and lab description, soil types, and soil erosion. Additional topics include the study of soils for use as environmental indicators that record complex climate and vegetation evolution patterns over time; soil chemistry and its influence on agricultural yields, solubility and mobility of soil constituents, and control on overall soil development; soil geomorphology, soil taxonomy, soil geography; and computer modeling of runoff and soil erosion as well as radiocarbon dating. This course includes in-depth field and laboratory work. Most field work consists of performing field descriptions of soil and maintenance and upkeep on soil erosion plots. Lab work consists of various physical and chemical analyses conducted on samples gathered in the field as part of soil pit descriptions or erosion research. Students should possess strong reading, comprehension, and computation skills in order to successfully complete this course and its lab components. 2 class hours; 3 laboratory hours
Credits: 3                      Offered: Semester I
Prerequisites: CH 1104 or GL 1003 or GL 2003

GL 3524 Lake Sedimentation
Environmental change is one of the most pressing issues of our time. As such, research into how landscapes evolve in the wake of climate change and anthropogenic impacts is a prominent discipline. Lake sediments serve as valuable archives of environmental change and have yielded a plethora of information not only related to past environments, but provide insight on the current state of Earth systems and provide the necessary tools to predict what might be in store for the future. Coursework includes field trips to frozen lakes, lab analysis and computer modeling, in addition to theory behind various proxies for environmental change. Students in this course will collect lake sediment cores and subject them to rigorous analyses including organic matter content, fossil pollen, charcoal, and more. The interpretations of these sediment proxies will be used to reconstruct how landscapes evolved in central Maine over the past 12,000 years. 3 class hours; 3 laboratory hours
Credits: 4                      Offered: Semester II
Prerequisites: GL 1003 or GL 2003  Alternative Years Even

GL 4003 Global Change
This course covers the science of climate and related ecological change in depth. Students learn the geological history of climate and climate change, study the atmospheric, astronomic, geological, and anthropogenic processes that lead to change, examine the basics of mathematical climate change modeling, study the predictions that result and their differing basis, and project the results onto the landscape in the form of analysis of potential for future regional and local changes. 3 class hours
Credits: 3                      Offered: Semester II
Prerequisites: Junior Status or consent
GL 4011 Earth and Environmental Science Seminar: Theme-Based
This course examines important timely topics of Earth and environmental sciences. Students will engage in reading significant primary literature, lead discussions, and write thoroughly researched papers pertinent to the subject matter.  

Credits: 1  
Offered: Semester II  
Alternate Years Even  

Prerequisites: CH 1104, CH 1114, BI 1114; GL 1003 or GL 2003; CH 4034 or CH 4044 or GL 3044 or GL 3223 or GL 3433 or GL 3524 or GL 4003; Junior Status

Honors

HN 2061 Honors Seminar
Students in the seminar will choose a current topic of interest and explore the issue from a perspective of multiple disciplines, using knowledge and skills from the humanities and nature and social sciences. Through lively discussion and critical reading and writing, students will develop their skills in synthetic reasoning while expanding their knowledge of current issues such as water resources, food systems, or wildlife reserves. This course may be taken twice for credit.  

Credits: 1  
Offered: Semesters I and II  

Prerequisites: Enrollment in Honors Program

HN 3063 Honors Multidisciplinary Independent Study
An Independent Study is advanced work that allows a student to investigate a topic in depth and beyond existing course work. In this Honors Multidisciplinary Independent Study, a student will choose an issue of interest and study it from the perspectives of multiple disciplines. Examples of issues could be water pollution studied from both a chemistry and policy perspective, or hunting ethics examined from both a biological and anthropological perspective. The Independent Study will include a culminating project with a reflection about different insights provided by the various disciplines. Students pursuing an Independent Study will complete a plan of study to be approved through the Honors Committee prior to following the procedure for applying for an Independent Study as outlined in the Unity College catalog (see Unity College Honors Program Handbook for details.)  

Hours dependent on individual  
Credits: 3  
Offered: Semesters I and II  

Prerequisites: HN 2061, Enrollment in Honors Program, and Cumulative GPA of 3.50 or above

HN 4063 Honors Transdisciplinary Capstone
Trans-disciplinary studies are inquiry-based and often begin with a current and relevant question. Examples could be, “How do we reduce lead concentrations in our lake?” or “What are the largest obstacles to greater local food production in this community and how can we overcome them?” Trans-disciplinary studies are also solution-oriented and collaborative. A group of two or three students will identify its question of interest, integrate the tools and knowledge of the humanities, natural and social sciences, and involve perspectives from broad constituents to develop a proposed solution. Each group will prepare a culminating project on its study question. Students enrolling in the Honors Trans-disciplinary Capstone will complete a plan of study approved through the Honors Committee prior to the beginning of the semester in which they are enrolled (see Unity College Honors Program Handbook for guidelines.)  

Credits: 3  
Offered: Semesters I and II  

Prerequisites: HN 2016, Enrollment in Honors Program, competition of at least 15 Honors credits and cumulative GPA of 3.50 or above

Humanities

HU 1003 Spanish
This course is an introduction of the use of the Spanish language with its emphasis on active communication through conversation, as well as the skills of reading and writing. The course features hands-on communicative activities which will involve pair and group work. Students also develop some rudimentary knowledge about the cultures of the Spanish-speaking world. This course is designed for the beginning student with no previous experience in Spanish.  

Credits: 3  
Offered: Semester I  
Alternate Years Even
HU 2003 American History from Post-Civil War to the Present
This class covers American history from post-Civil War Reconstruction to the present through an examination of the major ideas and forces that shaped the country during this period. The class will focus on particular themes and periods, including the meaning of freedom, especially as it emerged from Emancipation and Reconstruction and reached some measure of fulfillment in the Civil Rights Movement in the 1950s and 1960s; the profound social, economic, and political effects of the industrialization of America between the collapse of Reconstruction and World War I; the progressive political reform that culminated in FDR’s New Deal and which still, in many ways, defines the terms of our political debate today; the post-World War II prosperity and growth that not only propelled America onto the global stage as a superpower, but remade our landscapes at home with the suburbanization of America; and the rise of cultural and political conservatism, beginning in the 1970s and continuing today against the background of increasing globalization and global change. Students will be encouraged to understand these developments not simply as historical facts, but as a point of departure to think about their relevance to current events. 3 class hours
Credits: 3                 Offered: Semester II
Prerequisites: None

HU 2023 Topics in Humanities
What does it mean to be human? How can we cultivate a sense of wonder? What forms our identity and sense of place? This topics course explores these questions and more by offering students a broad-based inquiry into the disciplines that make up the humanities; namely, literature, history, philosophy, and cultural studies. Topics vary from semester to semester and may include: Civil Disobedience, The Environment in Film, Food Studies, Mythology and Folklore, and World Music. The course may be repeated for credit under a different topic. 3 class hours
Credits: 3                   Offered: Semesters I and II
Prerequisites: CM 1003

HU 2123 Spanish II
Students will develop their abilities in speaking, listening, reading, and writing in Spanish to a high novice level. Emphasis is on active communication through conversation. Students will also continue their introduction to Hispanic culture. 3 class hours
Credits: 3                 Offered: Semester II
Prerequisites: HU 1003

HU 3033 Advanced Topics in Humanities
In this course, students will expand on their knowledge of methods used in the humanities in order to explore cultural phenomena rooted in a specific time and place. The topics vary from semester to semester and may include, for example, The Politics of Nineteenth Century New England Tribal Peoples, American Abolitionist Literature, Popular Culture in the Middle Ages, and Post-Colonial African Sculpture. Each course is designed to meet higher-level outcomes in reading, research, writing, and critical thinking. 3 class hours
Credits: 3                 Offered: Semester II
Prerequisites: CM 1013 and Sophomore Status
Alternate Years Odd

HU 3113 Global Environmental History
Some societies rise to greatness and then collapse, while others persist for millennia. The biggest determining factor for long-term success is a society’s relationship to the natural world, and this is shaped largely by how people organize themselves to share information, make decisions, and use power. We will look at cases throughout human history, from small-scale bands and communities to regional empires and the emerging world-system, to discover why some societies fail. How the “dark ages” that follow can act as incubators for future growth, and how other societies persist and adapt. Are we due for a collapse, given the patterns of history, and what would a post-collapse world look like? We will consider Hardin’s “tragedy of the commons”, Ostrom’s institutions for collective action, Diamond’s geographical perspectives, Chew’s historical patterns, and Wallerstein’s world-systems theory. 3 class hours
Credits: 3                 Offered: Semester II
Prerequisites: Sophomore Status
HU 3133 Art History
This course is an introduction to the art of the world from antiquity to the present. Students will develop analytical and interpretive skills in the context of a historical understanding of art. 3 class hours
Credits: 3
Prerequisites: CM 1013 and Sophomore Status
Offered: Semester II
Alternate Years Odd

Interdisciplinary Core
IC 1111 Unity Transfer Experience
Unity College transfer students will work with a small group of other first semester students to get settled, oriented, and (most of all) involved. Among other things, students will identify campus and community resources, establish a support network, and engage in community collaboration. This course requires participation in the NOVA wilderness experience and a community service contribution. 1 class hour
Credits: 1
Offered: Semesters I and II
Prerequisites: At least 24 college credits accepted in transfer or at least 22 years of age

IC 1113 Unity Experience
This first-semester course introduces students to Unity College and the Environmental Citizen curriculum. It encompasses the NOVA Wilderness Orientation Program, engagement with campus resources, academic advising and planning, community service, and an introduction to a key environmental issue. The structure of the course is largely experiential. 3 class hours
Credits: 3
Offered: Semesters I and II
Prerequisites: None

IC 2213 Community Applications
Let’s get something done. Work together with classmates, faculty, and community members to investigate a pressing environmental concern, imagine ways to help, and then help. Topics vary with instructor; examples include “Citizen Science” featuring scientific monitoring of species and ecosystems; “Investigating Issues and Action” featuring environmental controversies; and “Landscape Conservation” featuring service learning with local and land trusts. Each semester, supplementary course descriptions detailing the topics covered are published in the course schedule. This course may be repeated for credit if a student chooses a different topic. 3 class hours
Credits: 3
Offered: Semesters I and II
Prerequisites: IC 1111 or IC 1113 and Sophomore Status

IC 2223 Environmental Issues and Insights
What are the most pressing environmental issues of our time? What do we need to know to address them? In this class, students approach these questions by expanding their knowledge and perspective, discussing important environmental ideas, and thinking about their future. Study of popular culture, history, and social conditions provide the bigger picture and put our environmental challenges in context. 3 class hours
Credits: 3
Offered: Semesters I and II
Prerequisites: IC 1111 or IC 1113, and CM 1013

IC 3413 Environmental Scenarios and Solutions
Environmental Scenarios and Solutions bring students from multiple disciplines together to envision strategies for a sustainable future in the context of a changing climate. Training in quantitative literacy will prepare students to work in teams to analyze major 21st century problems that they are likely to encounter in their future careers. 3 class hours
Credits: 3
Offered: Semesters I and II
Prerequisites: IC 2223 and Junior Status

Learning Resources
LR 1001 Communication Studio
This one-credit course offers extra support to students in small groups that focus on students’ individual writing and communication needs. Students may elect to enroll in this class with other first-year communication classes; they may elect to enroll in this class along with other Unity College classes that require written, oral, or digital projects;
or they may be placed in this class at the recommendation of the Director of Writing in consultation with their advisors, Unity College Faculty, or Unity College staff. This course may be repeated once for credit. 1 tutorial hour
Credits: 1                                                                                                                  Offered: Semesters I and II
Prerequisites: Approval of Director of Writing

LR 1113 Elementary Algebra
Elementary Algebra is the first course in the algebra sequence. It is designed for students with little or no background in algebra. Topics include signed numbers, polynomials, rational expressions, first degree equations, word problems, functions, slope, and the graphing of linear equations. 3 class hours
Credits: 3                                                                                                                Offered: Semester I
Prerequisites: Placement

LR 1123 Intermediate Algebra
This is the second course in the algebra sequence. It is expected that students taking this course can perform operations with signed numbers and algebraic expressions and can solve linear equations. Topics include rational expressions, functions, graphing, systems of linear equations, radicals, quadratic equations, and word problems. 3 class hours
Credits: 3                                                                                                            Offered: Semesters I and II
Prerequisites: LR 1113

LR 1222 Introduction to Computer Applications
This course introduces the Microsoft Office software applications of word processing (Word), spreadsheet (Excel), data base (Access), and presentation (Power Point). The emphasis of this class is on the concepts and hands-on teaching of computing and problem solving. The internet, as well as email etiquette, web browsers, web search, and desktop operating systems will be introduced. Concepts and procedures will be introduced and discussed in the lecture prior to the hands-on lab where students apply learned skills. Independent projects will be completed that coincide with each software application. A passing grade in this course fulfills the computer proficiency graduation requirement. 2 class hours
Credits: 2                                                                                                                          Offered: Semester II
Prerequisites: None

Mathematics

MA 1223 Algebra and Trigonometry
This course is a sequel to LR 1123 and concludes our algebra sequence. Students continue their study of algebra and analytical geometry, and begin their study of trigonometry. Further topics from algebra including exponential and logarithmic functions, along with introductory topics from trigonometry including circular functions, trigonometric and invers trigonometric functions, and solutions to right and oblique triangles will be studied. The course is designed to develop an understanding of the topics from algebra and trigonometry essential to the study of calculus. 3 class hours
Credits: 3                      Offered: Semesters I and II
Prerequisites: LR 1123 or Placement

MA 2003 Applications in Mathematics: Theme
In this thematic course, alternative topics not covered in the traditional Alg/Trig, Calculus, and Statistics sequences are introduced. Various tools and methods of problem solving are discussed and utilized. Topics may include, but are not limited to, probability, logic, modeling, geometry, algebra, game theory, and history of math. This course fulfills the Disciplinary Core Math requirement. This course may be repeated with a different theme for credit. 3 class hours
Credits: 3                   Offered: Semester II
Prerequisites: LR 1123 and others as dictated by theme

MA 2243 Elementary Statistics
This course deals with various introductory topics from probability and statistics with emphasis on the interpretation of experimental data. Students will study descriptive statistics, probability distributions, and inferential statistics (tests of hypotheses). In addition, students will actually do statistics using technology tools such as the TI-83
MA 2333 Calculus I
Calculus is the mathematics of change. Calculus I deals with an introduction and treatment of the major concepts and techniques of differential calculus. Students will study the heuristic, visual, and algebraic approaches to: difference equations, limits, and rates of change of functions (derivatives). Applications of derivatives will include optimization and differential equations used in modeling. 3 class hours
Credits: 3                      Offered: Semesters I and II
Prerequisites: LR 1123

MA 3253 Applied Statistics
This course is for students who wish to continue their study of statistics. The topics to be studied in the course all fall under the general heading of inferential statistics or tests of hypotheses. These statistical tests include t-tests, Z-tests, chi-square tests, F-tests, analysis of variance, regression and correlation, along with the nonparametric Runs test. Throughout the course, students will use technology tools such as the TI-83 calculator, Microsoft Excel, or the campus-wide statistics package JMP to supplement and enhance the classroom material. 3 class hours
Credits: 3                      Offered: Semesters I and II
Prerequisites: MA 1223

MA 3263 Biometry
Biometry, biological statistics, or quite simply biostatistics, is the application of statistical methods to the solution of biological problems. Topics to be studied include: the collection, organization, analysis, presentation and interpretation of biological data; the statistical principles underlying the management of biological data; and the use of various technology tools such as the TI-83 calculator, Microsoft Excel or the campus-wide statistics package JMP. 3 class hours
Credits: 3                      Offered: Semesters I and II
Prerequisites: MA 2243

MA 3443 Calculus II
The study of calculus continues with students being introduced to the main topics of integral calculus. Students will study antiderivatives, definite and indefinite integrals, techniques and applications of integration to probability, environmental science, physics, and solution to separable differential equations from a heuristic, visual, and analytical approach. Throughout this course, students will use software packages to supplement and enhance the classroom material. Calculus is a tool of great importance, and a basic understanding of it is a prerequisite for further study in any branch of science theory. 3 class hours
Credits: 3                     Offered: Semester II
Prerequisites: MA 2333                  Alternate Years Odd

Outdoor Studies
OS 1002 Outdoor Living: Food, Fitness, and Outdoor Cooking
This course is designed to introduce students to fitness, nutrition, and cooking techniques specific to backcountry living. Food preparation and caloric needs for backpacking, canoeing, sea kayaking, winter pursuits, and base camp will be discussed. Students will learn how to bake using a reflector oven, dutch oven, and double boiler as well as planning a nutritious meal that will appeal to diverse audiences. The fitness component will include basic information such as heart rate calculation, cardio, strength, and flexibility training specific to backcountry pursuits. 2 class hours
Credits: 2                                                                                                              Offered: Semester II
Prerequisites: None
Parks, Recreation, and Ecotourism

PR 1023 Interpretation of Natural and Cultural Heritage
Students will create personal interpretive programs while practicing fundamental oral communication methods and techniques. Completion of this course enables students to become interpretive guides in natural and cultural resource areas and facilities. Students will develop a portfolio of skills demonstrating best practices for interpretive talks and walks. **2 class hours; 2 laboratory hours**

Credits: 3
Prerequisites: None
Offered: Semesters I and II

PR 2123 Sustainable Ecotourism
Students will explore a wide range of possible sustainable ecotourism activities, including traditional outdoor activities like hiking, canoeing, hunting, fishing, and traditional touring experiences like scenic drives, shopping for local goods, and visiting local natural and cultural sites. Comparisons between standard tourism practices and development politics with ecotourism principles form the basis for creative student projects that explore new ways of conducting more sustainable tourism. Special attention is paid to the relationship between resource management agencies and private for profit business. **2 class hours; 2 laboratory hours**

Credits: 3
Prerequisites: None
Offered: Semesters I and II

PR 3213 Visitor and Resource Protection
The course will examine roles of visitor and resource protection, law enforcement, search and rescue, fee collection, and special operations. Students will participate in field operations in addition to classroom sessions. **3 class hours**

Credits: 3
Prerequisites: Sophomore Status
Alternate Years Even

PR 4123 Interpretive Methods
Students critically examine the wide variety of personal and non-personal interpretive methods used by organizations that deliver natural, cultural, and/or historical interpretation programs. Working in teams, students design effective interpretation programs that include personal presentation, exhibits, website, audio/visual publications, and then present them to public audiences. Collaboration with a community partner organization is often a requirement for this course. **2 class hours; 2 lab hours**

Credits: 3
Prerequisites: PR 1023 and Junior Status
Offered: Semester I

PR 4223 Park and Forest Resource Planning
This course is designed to acquaint students with park planning principles and procedures. Students will work through the major phases of facility design. The lab section in this class will provide students with hands-on experience in the park and open space planning process. **3 class hours**

Credits: 3
Prerequisites: Senior Status
Offered: Semester I

Physics

PS 2004 Physics: Mechanics and Energy
This course focuses on mechanics and energy. Topics covered include: Newton's laws of motions and their applications, forces, work and energy, principles of conservation, rotational and harmonic motion, and pressure. The associated laboratory section includes both hands-on and mathematical explorations of projectile motion, collisions, rotational motion, and pendulums. **2 class hours; 2 laboratory hours**

Credits: 4
Prerequisites: MA 1223 or concurrent enrollment
Offered: Semester I

PS 2014 Physics: Heat, Electricity and Magnetism
This course focuses on electricity and magnetism. Topics covered include thermodynamics, waves and sound, electricity magnetic force and fields, electromagnetic waves and nuclear energy. The associated laboratory sections includes both

Unity College Catalog 2013-2014
hands-on and mathematical explorations of circuits, waves, solar panels, magnets, and light. 3 class hours; 2 laboratory hours
Credits: 4
Prerequisites: MA 1223 or concurrent enrollment
Offered: Semester II
Alternate Years Odd

**PS 3003 Sustainable Energy**
This course is an application of basic physics and introductory engineering to the problems of sustainable energy production systems. Topics covered include solar, hydroelectric, wind, wave, tidal, and biomass energy systems. Taught as a combination of lecture and engineering shop, students respond partly through constructing a major project or demonstrator in renewable energy or energy efficiency. 2 class hours; 2 laboratory hours
Credits: 3
Prerequisites: Junior Status
Offered: Semester II
Alternate Years Even

**PS 3303 Green Building: Assess, Design, Retrofit**
Green building in the 21st century will focus on energy efficiency, energy conservation, carbon footprint reduction, and related concerns. Treating buildings as systems, this course will examine the principles and practices of green design used by architects, designers, builders, and energy auditors. Students will consider the building shell, space heating plant, lighting, ventilation, and appliances. Among other activities, students may model the energy performance of various building designs, audit the performance of existing buildings, and weatherize homes. 2 class hours; 2 laboratory hours
Credits: 3
Prerequisites: Junior Status
Offered: Semester I
Alternate Years Odd

**Political Science**

**PL 1013 American Democracy**
This course approaches the basic history, structure, and character of American politics, governmental institutions, and laws through the exploration of concepts and issues in areas such as civil liberties, federalism, judicial review, political parties, interest groups, and the role of media and public opinion. A key assignment is semester-long analysis, reporting, and presentation by each student on multiple aspects of a unique U.S. House or Senate campaign in progress. 3 class hours
Credits: 3
Prerequisites: None
Offered: Semester I
Alternate Years Even

**PL 2013 State and Local Government**
Reading, lectures, essay-writing, in-class presentations, research projects, discussion, debate, role-playing, group exercises, video viewing, and a field trip to the Maine State Capitol are some of the tools this course uses to understand state and local government practice and policy. The aim is to bring governing to life. Students will analyze and communicate, orally and in writing, the history and current status of important state and local policy issues. 3 class hours
Credits: 3
Prerequisites: None
Offered: Semester II
Alternate Years Even

**PL 2033 World Politics**
This is the study of the basic concepts in relations among the world’s nations, and of forces that exist beyond the nation-state. Students will analyze and communicate, orally and in writing, the history and current status of important international policy issues such as nationalism, globalization, security, the United Nations, the role of women in international relations, and environment and population in developing countries. 3 class hours
Credits: 3
Prerequisites: None
Offered: Semester II
Alternate Years Even

**PL 3013 Issues in Food and Agriculture**
If America is a Fast Food Nation, how did we get that way? How do politics, economics, culture, and geography shape what people eat? How do food and agriculture affect our way of life and our environment? How do various organizations involved in food policy prioritize and respond to food and agricultural issues? This course will examine global questions and look at local examples of how these questions play out for people and communities in Maine. 3 class hours

Unity College Catalog 2013-2014 -86-
PL 3213 Natural Resource Law
Natural resource law pertains to the regulation, management, and allocation of open access resources such as forests, fisheries and wildlife, water, land, including rangeland and wilderness, and minerals. This law is older than, and in many ways established the framework for, the major modern environmental pollution statutes, such as the Clean Air and Water Acts, which are covered in a separate course, Environmental Law. Because one-third of this nation’s lands are federal public lands, much of the natural resource law has developed in the context of the management of public lands by federal land management agencies, including the NPS, FWS, FS, and the BLM. This course will focus on the development of natural resource law primarily, but not exclusively, on public lands; the decision process of the agencies that manage the natural resources on those lands; and the laws that establish the limits of the authority for that management. Using case studies and current issues, students will learn how different stakeholders and the courts have influenced the law that determines how our natural resources are managed and protected. 3 class hours
Credits: 3
Prerequisites: PL 1013 or PL 2013 or Junior Status

PL 3233 Environmental Law
In the 1970’s, Congress enacted numerous environmental statutes aimed at protecting the nation’s environment from the impacts of uncontrolled development and industrial pollution, and improving the quality of the federal government’s environmental decision making. These include the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Toxic Substances Control Act, CERCLA and the Safe Drinking Water Act. It was also at this time that Congress created the EPA to administer the major new regulatory programs established by these laws, as well as another new agency, the Council on Environmental Quality, to implement what is arguably the most important piece of environmental legislation ever written, the National Environmental Policy Act. Many states have adopted similar laws. This course will focus on both the substance of major U.S. environmental pollution statutes and the decision making process of the agencies that administer them (a body of law known as administrative law). Using case studies and current issues, students will learn how different stakeholders and the courts have influenced how agencies implement the law and the effect of this in our environment. 3 class hours
Credits: 3
Prerequisites: PL 1013 or PL 2013 or Junior Status

PL 3413 Environmental Advocacy
How can we persuade others to help us protect the environment? Do the ends justify the means? This course offers the theoretical and practical groundwork needed to evaluate goals and put ideas in action. Students learn how to plan campaigns, build coalitions, conduct focus groups, select and influence audiences, and create and deliver effective messages. Students will discuss and analyze a variety of advocacy programs and plan an actual advocacy campaign. A field trip may be required. 3 class hours
Credits: 3
Prerequisites: Sophomore Status

PL 4313 Economic and Quantitative Analysis of Environmental Policy
This course examines important technical problems of environmental management, regulation, and planning. Students examine standard quantitative techniques, such as basic macro- and microeconomic analysis for policy-making and associated cost-benefit analysis, as well as specialized environmental techniques such as risk assessment, hazard assessment, pollution trading, carbon taxation, and more. The course also includes detailed qualitative and/or historical treatment of problems and cases, providing a critical counterbalance to the quantitative approach, particularly with regard to potential values reductionism that may be present in any narrow economic analysis of human values. 3 class hours
Credits: 3
Prerequisites: MA 1223, MA 2243 or Consent

PL 4413 Natural Resource Policy
How do governments deal with society’s effects on the natural world and the environment’s effect on humans? The
purpose of this course is to help students develop ways and means to investigate this question. Students explore
issues and conduct policy analysis in areas such as water resource management, global climate change,
environmental justice, toxic and hazardous waste, and comparative strategies in environmental protection. The
course features guest lectures by outside experts, field trips, and policy research projects designed to make a
difference in the real world. 3 class hours
Credits: 3 Offered: Semester I
Prerequisites: Junior Status

Psychology

**PY 1013 Introduction to Psychology**
This course is a survey of psychology as a science of behavior. Topics include basic principles underlying behavior and experience, learning, human development, motivation, personality, and psychotherapies. 3 class hours
Credits: 3 Offered: Semesters I and II
Prerequisites: None

**PY 2013 Human Development**
This course is a survey of development of the person across the entire age span from conception to death. For each stage physiological, intellectual, social, emotional, and psychological aspects of growth are studied. Emphasis will be placed upon environmental influences that can promote the individual’s growth and development. 3 class hours
Credits: 3 Offered: Semester II
Prerequisites: PY 1013

**PY 2113 Group Process and Management**
The basic principles of small group interaction will be explored in both didactic and experiential components of the course. Topics will include communication skills, values clarification, group problem solving, group communication models, stages of group development, briefing and debriefing techniques, leadership and facilitation models, and group termination. Some emphasis will be placed on aspects of processing diverse groups – non-formal education, therapeutic and wilderness settings included. This class will be offered in the spring Experiential Educators Block and on campus in the fall. The fall course may include an over-night experience.
Credits: 3 Offered: Semesters I and II
Prerequisites: PY 1013

**PY 3013 Human Sexuality**
This course will examine multiple aspects of the subject area on human sexuality. Students will gain an understanding of this topic from psychosocial and physiological perspectives. Specific areas to be studied will include sexuality and popular culture, dimensions of gender, and male and female sexual anatomy. Various forms of intimacy and sexual expression in different cultures will be explored as well as typical sexual behaviors and forms of sexual coercion, including harassment, aggression, and abuse. 3 class hours
Credits: 3 Offered: Semester II
Prerequisites: PY 1013 Alternate Years Even

**PY 3123 Educational Psychology**
This course examines the nature of learning and instruction in considerable depth. It emphasizes theories and research and covers diverse materials related to how people think, learn, and develop, including language, cognition, motivation, and memory. It also covers skills essential to effective teaching; developing instructional strategies, planning and managing classroom activities, and assessing student learning. This course includes both lecture and experiential components and both individual and collaborative projects. Students are required to complete eight hours of observation in an educational setting. 3 class hours
Credits: 3 Offered: Semester II
Prerequisites: PY 1013, Sophomore Status and concurrent enrollment in ED 1010

**PY 3133 Abnormal Psychology**
This course offers an in-depth study of various theoretical perspectives on psychological disorders, including psychosis, depression, anxiety, psychoactive substance use, and disorders of childhood and adolescence. Biogenetic, socio-cultural, and psychological theories of abnormality are examined, as are corresponding modes of
PY 4223 Counseling Theories for Wilderness Programming
This course presents the basic issues of counseling in a wilderness setting with its limitations and potentials. Students will be introduced to therapeutic counseling models: Reality Therapy, Person-Centered Therapy, and a Trans-Theoretical model for wilderness-based counseling. The course is a combination of theory, application and practice in which the student will be introduced to the philosophy and concepts of counseling in a wilderness setting as well as developed skills in each of the specific models mentioned above. 3 class hours

Credits: 3
Prerequisites: PY 1013
Offered: Semester I

Sociology

SY 1013 Introduction to Sociology
Sociology is a field of study that explains social, political, economic and ecological phenomena in terms of social structures, social forces, and group relations. This introduction focuses on socialization, culture, the social construction of reality, inequality, race and ethnic relations, poverty, and political sociology. Students gain an understanding of the three main sociological perspectives, apply them to make sense of contemporary social problems, and realize how one’s individual circumstances are shaped by much larger social forces. 3 class hours

Credits: 3
Prerequisites: None
Offered: Semester I

SY 2013 Criminology
This course introduces the development of criminology theory from a historical perspective through current developments. Particular emphasis will be put on the impact of criminological theory on the development of laws and our national concept of punishment and rehabilitation. 3 class hours

Credits: 3
Prerequisites: None
Offered: Semester II

SY 3183 Social Problems
Students will analyze selected social issues such as world hunger, poverty, overpopulation, sexism, or corporate power from conservative, liberal, and progressive perspectives. Students will identify, express, and deepen their personal viewpoints. This course will involve theories of social problems, issue oriented research, identifying ideologies and how they are expressed in writing and other media, and social action to make a difference. 3 class hours

Credits: 3
Prerequisites: Sophomore Status
Offered Semester II
Alternate Years Even

Sustainable Agriculture

SA 1003 Fundamentals of Organic Horticulture
Successful organic farming and gardening depends on a sound grounding in the fundamentals of soil management, crop planning, pest management, and season extension. Students will engage in these fundamentals using campus gardens, the campus hoop house, and off-campus facilities. In addition, business management and marketing issues related to organic farming will be addressed. 2 class hours; 2 laboratory hours

Credits: 3
Prerequisites: None
Offered: Semester I

SA 2013 Livestock and Pasture Management
This course covers the management of livestock farm systems, their pastures and paddocks, and associated systems of winter feed production such as hayfields and silage or baled silage production systems. The primary emphasis is on natural/organic farming and dairying using rotation grazing systems, sustainably grown winter-feeds systems, and energy efficient use of manures and farm and household wastes in fertilization. The major species and breeds of livestock and poultry are discussed. The course discusses and practices basic husbandry and vetting for each breed, as well as appropriate shelter, fencing and other facilities design, construction, and maintenance. 2 class hours; 2
laboratory hours
Credits: 3
Prerequisites: BI 1114

SA 2023 Sustainable Pest Management
Nature fills every ecological niche with organisms that exploit available resources – sunlight, nutrients, carbohydrates and water. Some of these organisms compete with human plans for crop production and, hence, earn the name “pest.” This course explores various pest management approaches such as Integrated Pest Management, Plant Health Care, and Ecosystem Management. Students will develop strategies to manage diseases and weeds. 3 class hours
Credits: 3
Prerequisites: BI 1114

SA 2113 Sustainable Agriculture Systems
A survey of North American farms will reveal strikingly different farming models, from the large industrial/commodity model to the smaller scale local food model and others in between. This course explores the economic, social, and ecological sustainability of various farm models. Through field trips, films, and readings, students will explore issues of farm viability, environmental impact, and the interrelationships between farms and their surrounding communities. Particular emphasis will be placed on strategies used by farmers to create successful small-scale, diversified, sustainable farms. 4 class hours
Credits: 3
Prerequisites: BI 1114 and Sophomore Status

SA 3363 Soil Fertility
Healthy ecosystems require healthy soil. In this course students learn about soil chemical and biological characteristics and how they relate to plant and animal nutrition and agriculture systems. Plant uptake mechanisms for nutrients, the roles of organic matter and soil microorganisms in soil ecosystems, use of soil amendments, and nutrient cycling issues are addressed. Students will devise management recommendations for specific sites and plants. 3 class hours
Credits: 3
Prerequisites: BI 1114 and Sophomore Status

SA 4014 Sustainable Agriculture Project
In this course, students will prepare detailed farm management plans covering soil management, pest management, livestock husbandry, irrigation, crop planning, labor management, financial analysis, and marketing. Whenever possible, students will partner with existing or proposed farms. Students may propose an equivalently rigorous alternative project related to some aspect of food and agricultural policy. 3 class hours; 2 laboratory hours
Credits: 4
Prerequisites: SA 3363 or PL 3013 and Junior Status

Wildlife

WF 1002 Introduction to Wildlife and Fisheries Conservation
Wildlife and fisheries conservation is introduced, described, and modeled by faculty and visiting fish and wildlife mentors in context of professional opportunity, funding, regulation, biodiversity, population sampling, harvest potential, resource and habitat management, public perception, and policy development. Students will explore the professional literature, write professionally, anticipate course selection as a wildlife or fisheries student, and develop career goals and objectives. This course is designed to provide current students in the wildlife majors with information to direct their academic and professional career planning. 2 class hours
Credits: 2
Prerequisites: None

WF 1003 North American Wildlife
This course focuses on preparing students to be knowledgeable about the distribution, natural history, and identification of the major game species of North America. The course is built on taxonomy of big game, small game, fur bearer, and waterfowl. Some emphasis is placed on positive and negative societal values as well. General
management considerations are discussed. The lab covers the identification specimens in hand and in field simulated
images. 2 class hours; 2 laboratory hours
Credits: 3
Prerequisites: None

WF 1013 Introduction to Wildlife Care and Education
In this class, students will begin to understand the issues and realities of caring for wild animals in a captive setting. They will speak with professionals in the field and gain some hands-on experience. They will learn how to find information about animals and best care practices. They will also gain experience with public speaking and educational principles. At the end of the class, students will have a foundation of knowledge about basic principles and ethics of animal care. 2 class hours; 2 laboratory hours
Credits: 3
Offered: Semesters I and II
Prerequisites: None

WF 1101 Seminar in Captive Wildlife Care and Education
In this peer-teaching seminar course, students will explore current trends in research relevant to captive animal collections. Topics will be selected at the beginning of the semester and can include current areas of study, future directions, interdisciplinary opportunities, and experimental design challenges in the captive environment. Students will be responsible for attending and participating in discussions. This course can be repeated for credit. 1.5 class hours
Credits: 1
Offered: Semester II
Prerequisites: None

WF 2003 Animal Training
Through exploration of operant conditioning, students will understand the theory supporting animal training and be introduced to various practices and techniques that form the art of animal training. Training is a two-way communication between the trainer and the animal that relies on an understanding of animal behavior. The knowledge and skills learned in this course may be utilized to train domestic and exotic animals for medical procedures, animal husbandry, and animal handling needs. 2 class hours; 2.5 laboratory hours
Credits: 3
Offered: Semester I
Prerequisites: None

WF 2433 Wildlife Techniques
This course provides students with the fundamental skills and techniques that are used by wildlife professionals to obtain knowledge and information necessary to monitor and manage wild populations of animals. Emphasis is placed on working with public concerns as well. The application and limitations of specific techniques are discussed in lecture. Topics include: estimating populations, radio telemetry, ageing and sexing, capturing and marketing, habitat assessment, data collection, and communicating with people. Laboratory time provides hands on experiences with topics covered in lecture. Supplemental experiences often come through working with professionals in the wildlife field. 2 class hours; 2 laboratory hours
Credits: 3
Offered: Semesters I and II
Prerequisites: WF 1003 and MA 2243

WF 3013 Population Assessment and Management
This course focuses on techniques and practices used to manage populations of wildlife species. Concepts discussed will include how habitat selection and quality, population structure, and interactions with other species influence population growth. We will then explore how these concepts can be applied to harvest management, small population management, pest management, and biodiversity conservation. Techniques addressed will include estimation of population size and other demographic parameters using direct and indirect techniques. 2 class hours; 2 laboratory hours
Credits: 3
Offered: Semester II
Prerequisites: BI 2004 and Junior Status

WF 3023 Enrichment and Exhibit Design
When animals are brought up in captive environments they lose the opportunity to make choices. Through exhibit
designs and enrichment initiatives, we are able to provide animals with choices promoting natural behaviors. Students in this course will research natural history and behaviors of exotic animal species. They will utilize this information in designing animal exhibits and enrichment devices. During this process they will learn the value of setting goals and assessing the effects of environmental changes on captive animal welfare. 2 class hours; 2 laboratory hours
Credits: 3
Prerequisites: WF 1003 or WF 1013 and Junior Status
Offered: Semester II

WF 3101 Seminar in Captive Wildlife Care and Education
In this peer-teaching seminar course, students will explore current trends in research relevant to captive animal collections. Topics will be selected at the beginning of the semester and can include current areas of study, future directions, interdisciplinary opportunities, and experimental design challenges in the captive environment. Students will be responsible for finding relevant scholarly articles and leading class discussion on their subject of choice. 1.5 class hours
Credits: 1
Prerequisites: WF 1003 or WF 1013 and Junior Status
Offered: Semester II

WF 3103 Wildlife Habitat Assessment and Management
This course will explore how habitat and wildlife management can be integrated in adaptive ways to maintain sustainability in the face of climate change and other threats. The student will gain an elementary understanding of major landscape initiatives at the international, national, and regional levels, and become acquainted with the basic habitat assessment and management approaches and terminology in a variety of habitats such as forests, freshwater and saltwater marshes, agriculture lands, scrub/shrub habitats, grasslands, rangeland, and urban lands. The course will also acquaint students with a variety of equipment used to modify habitat. The course will emphasize concepts, principles, and terminology. 2 class hours; 2 laboratory hours
Credits: 3
Prerequisites: Junior Status
Offered: Semester I

WF 4013 Wildlife Conservation Capstone
This course will enable seniors in the wildlife biology and wildlife and fisheries management to demonstrate their understanding of and ability to integrate material from previous coursework. The ability to extract information from appropriate literature, apply concepts to new situations, work in groups, and write effectively will be emphasized. Students will critically examine case studies of current issues in wildlife management. Students will work in groups to produce products commonly expected to be produced by professional biologists. Examples could include such products as management plans, environmental assessments, and research proposals. 2 class hours; 3 laboratory hours
Credits: 3
Prerequisites: WF 3013 or WF 3103 and Senior Status
Offered: Semester II

WF 4034 Animal Health
This course examines the role of caretakers in animal health. It is based heavily on the perspective of animal keepers in zoos, but other aspects of animal work will be reflected. Students will become familiar with common health concerns for captive wildlife, including mechanisms for minimizing disease transmission, utility of animal training in maintaining health, preventative medicine, and general veterinary procedures. 3 class hours; 2 laboratory hours
Credits: 4
Prerequisites: WF 1003 or WF 1013 or BI 3204 or SA 2013 and Junior Status
Offered: Semester I

WF 4044 Capstone for Captive Wildlife Care and Education
The capstone for the CWCE program will have three focuses: research, behavioral management, and career preparation. Students will work with case studies to bring together knowledge and skills from previous courses to envision solutions to animal management challenges, focused on issues of conservation importance. The instructor will also provide guidance to students in preparing for a job search in the field. Students should be advised that this course will include professional-level projects demanding substantial effort. 3 class hours; 2.5 laboratory hours
Credits: 4
Prerequisites: WF 2003, WF 3023, WF 4034 and Captive Wildlife Care and Education Major
Offered: Semester II

Unity College Catalog 2013-2014
Academic Regulations

Grading Policy
Mid-semester grades are issued in the seventh week of the semester. These grades are for student information only, and are not entered on the transcript. Final grades, once posted, part of the official academic record.

The grading system used at Unity College follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Grade Point</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.0</td>
<td>Excellent</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
<td>Good</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
<td>Satisfactory</td>
</tr>
<tr>
<td>D</td>
<td>1.0</td>
<td>Poor, but passing</td>
</tr>
<tr>
<td>F</td>
<td>0.0</td>
<td>No credit. Recorded and calculated as part of the grade point average (GPA); F grades are subject to probationary standards.</td>
</tr>
<tr>
<td>W</td>
<td>--</td>
<td>Withdrawal. No credit. Recorded but not calculated as part of the GPA. In order to acquire a W instead of an F, a student must withdraw no later than one week after mid-semester grades are issued.*</td>
</tr>
<tr>
<td>I</td>
<td>--</td>
<td>Incomplete. Course work not completed because of circumstances beyond the student’s control. All work must be completed within one calendar year of the final day of the semester in which the incomplete was received. Work not completed within one year will automatically be changed to an F. Individual instructors may specify shorter time limits for incompletes. Not calculated in GPA.*</td>
</tr>
<tr>
<td>P</td>
<td>--</td>
<td>Pass. Given only for UCDEC. Not calculated in GPA.</td>
</tr>
<tr>
<td>U</td>
<td>--</td>
<td>Unsatisfactory. Given only for UCDEC. Not calculated in GPA.*</td>
</tr>
</tbody>
</table>

Note: All students have the right to review and challenge their records.

* Although these grades are not calculated into the grade point average, they may affect the student’s financial aid status.

Change of Final Grade
With the exception of the grade of “Incomplete,” final course grades are not changed after submission to the registrar except as provided for in this section. Any grade changes provided for in this section may only occur during the semester immediately following the semester in which the grade was originally submitted.

Change of Final Course Grade - Process for Instructors
If an error has been made in the calculation or transcription of the original grade, the instructor will notify the registrar of the error and the warranted correction will be made. Under no circumstances will a change in grade be allowed because of the submission of additional work after the grade has been submitted. Should an instructor wish to change a grade for any other reason, the request with justification, should be submitted to the Academic Regulations Committee for consideration. The committee will review the evidence, seek additional information as appropriate, and make a determination.

Appeal of Final Course Grade - Process for Students
If a student disagrees with his or her final grade for a course, she or he may initiate a conversation about it with the instructor. After this conversation, should a student wish to appeal the final course grade, she or he may appeal the grade to the Academic Regulations Committee. The appeal must be computer generated, and may be submitted by regular or electronic mail, by fax, or in person, and must be submitted no later than the end of the seventh (7th) week of the semester immediately following the semester in which the grade was originally submitted. Appeals are submitted to hein@unity.edu or by mail or fax to:

Academic Regulations Committee

c/o Registrar’s Office
The Academic Regulations Committee will consider grade change appeals twice a year during the week before classes begin for the fall and spring semester. The committee will review the appeal and other supporting documentation and information provided by the student and the instructor.

If the student believes that she or he did not receive proper due process in the appeal to the Academic Regulations Committee, she or he may appeal to the Provost. The appeal must be computer generated, and may be submitted by regular or electronic mail, by fax, or in person. It must be submitted no later than 10 working days after the date of notification of the Academic Regulations Committee’s decision. It must document how the appeal process was procedurally inappropriate in light of the timeline, criteria, and method of review published in the catalog. Appeals are submitted to mevans@unity.edu or by mail to:

Provost  
Unity College  
90 Quaker Hill Road  
Unity, Maine 04988

The Provost may seek additional information or documentation from the Academic Regulations Committee, the student, or other parties as appropriate, and upon review of the record will make a determination on whether satisfactory due process was provided to the student. The student will be notified of the decision no later than 10 working days after the Provost received the appeal. The decision will be final.

Repeated Courses
Students with a need to earn a higher grade may repeat a course previously taken; both in first and subsequent enrollments and grades will be a permanent entry on the academic record and transcript. The highest grade will be used in computing the cumulative grade point average. No additional credit will be granted for the repeated course. Courses completed with a passing grade of D or higher may only be repeated once.

Honors List
The Honors List is published after the end of each semester and includes names of students who have earned a minimum of 14 credit hours during the semester, received no Ds, Fs, Ws, or Incompletes, and achieved a minimum semester grade point average of 3.33.

- Honors - Semester grade point average of 3.33 – 3.49  
- High Honors - Semester grade point average of 3.50 – 3.74  
- Highest Honors - Semester grade point average of 3.75 or above

Unity Scholar Credit
As further recognition of outstanding scholarship, junior and senior students who have been on the Honors List in the highest honors category for the prior two semesters, and also have a cumulative grade point average of 3.75 qualify for the title of “Unity Scholar” and are eligible to take up to 17 credits for the flat tuition charge in the subsequent semester.

Academic Standing
Students not meeting the academic minimums necessary to progress toward a degree are provided with specific requirements to achieve good academic standing. The following scale is used to determine minimum conditions for satisfactory academic progress.

<table>
<thead>
<tr>
<th>Credits attempted</th>
<th>Cumulative grade point average</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 - 23</td>
<td>1.70</td>
</tr>
<tr>
<td>24 - 47</td>
<td>1.80</td>
</tr>
<tr>
<td>48 and above</td>
<td>2.00</td>
</tr>
</tbody>
</table>
Failure to meet the minimum standards of satisfactory academic progress will result in a student being placed on academic probation. Students who receive less than a 0.99 semester grade point average are automatically considered for suspension. Students who do not meet the minimum standards for satisfactory progress in two consecutive semesters will be automatically suspended from the institution. However, students on academic probation who achieve a semester grade point average of 2.50 or higher will be automatically continued on academic probation and not subject to suspension. The college reserves the right to suspend or dismiss a student at any time when academic work is unsatisfactory or when conduct is deemed detrimental to the teaching and learning goals of the college community. Students who have been suspended from the college because of poor academic performance may apply for readmission after a period of no less than one full semester. The application for readmission is available from the office of the registrar webpages. A second suspension for poor academic progress results in dismissal from the college.

**Appeal of Academic Suspension or Dismissal**

A student, who documents, in writing, extenuating circumstances that could not be prevented, may request reconsideration of academic standing from the Academic Regulations Committee. Students must submit their appeal within 15 days after final official grades are posted to the student portal. The student must submit a written appeal to:

Academic Regulations Committee  
c/o Registrar’s Office  
90 Quaker Hill Road  
Unity, Maine 04988

In addition to the student’s written appeal, the committee will consider information such as feedback from faculty and staff in a position to know the student’s work well, letters of support, other documentation received from the student or other offices on campus. The committee’s determination will be based upon whether the record shows evidence of extenuating circumstances beyond the student’s control, as well as the student’s likelihood for success upon readmission. The student will be notified of the committee’s decision by 10 days after receipt of the student’s written appeal.

If the student believes that she or he did not receive proper due process in the appeal to the Academic Regulations Committee, she or he may appeal to the Provost. The appeal must be written, and may be submitted by regular or electronic mail, by fax, or in person. It must be submitted no later than 10 working days after the date of notification of the Academic Regulations Committee’s decision. It must document how the appeal process was procedurally inappropriate in light of the timeline, criteria, and method of review published in the catalog. Appeals are submitted via email to mevans@unity.edu or to:

Provost  
Unity College  
90 Quaker Hill Road  
Unity, Maine 04988

The Provost may seek additional information or documentation from the Academic Regulations Committee, the student, or other parties as appropriate, and upon review of the record will make a determination on whether satisfactory due process was provided to the student. The student will be notified of the decision no later than 10 working days after the Provost received the appeal. The decision will be final.

**Add/Drop**

During the first six school days (eight calendar days) following registration, students may add or drop courses for the 15-week session through the student portal. Students should meet with their advisor before adding or dropping a course. Reductions below 12 credit hours during the six add/drop days will result in an appropriate tuition charge and financial aid reduction. The drop period for the three-week session will be during the first two days of classes.

**Advanced Standing**  
Students may also qualify for advanced standing through several types of examinations.
• **The College Level Examination Program (CLEP)**

Sponsored by the College Entrance Examination Board, CLEP, is a nationally recognized program of credit by examination. CLEP examinations are administrated monthly throughout the calendar year. Lists of times and examinations are available by writing:

College Level Examination Program  
888 Seventh Avenue  
New York, New York 10019

Or by visiting www.clep.org.

Unity will award a maximum of 30 credit hours for CLEP examinations in specific areas. CLEP credits are subject to transfer credit limitations.

• **Computer Proficiency Requirement**

Computer proficiency is required of all students who enroll at Unity College. All students will be required to take the Computer Proficiency exam unless they have accepted transferrable credits in Computer Science. In the fall semester, students will be given the computer proficiency exam packet. They will have until October 1st to complete the exam.

Students who successfully pass the exam will have completed the general degree requirement of computer proficiency. There will be no credit awarded for the completion of the computer proficiency exam. Students who do not successfully complete the exam may take the exam once more by picking up a second packet in the registrar’s office. Students will have until March 1st to complete the second exam. Students who do not successfully complete the exam the second time will be required to register for LR 1222 Introduction to Computer Applications in the subsequent fall semester. Students will receive two undergraduate credits for successful completion of LR 1222 Introduction to Computer Applications.

• **Advanced Placement**

This is a program offered by the College Entrance Examination Board to allow highly motivated students advanced entry by means of placement tests. Unity College allows academic credit for work graded 3 or higher, with the exception on Biology which must be graded at a score of 4 or higher, by the College Board. High school students should consult their guidance counselors for details.

Advanced Placement credits are subject to transfer credit limitations.

• **Unity College Designated Examination for Credit (UCDEC)**

Unity’s own test-out program, allows matriculated students to petition a faculty member to take an exam for credit in one of the courses below based upon past experience or self-directed previous study. The faculty member has to agree to give the exam for credit. The faculty member signing a UCDEC petition must be one who is currently or has previously taught that course. The courses approved for UCDEC are:

- AE 1012 Rock Climbing  
- MA 2243 Elementary Statistics  
- AE 1072 Winter Pursuits Level I  
- PR 1023 Interpretation of Natural and Cultural Heritage  
- BI 1114 Biology: Diversity of Life  
- PY 1013 Introduction to Psychology  
- SA 3363 Soil Fertility  
- CL 1013 Intro. To Conservation Law Enforcement

Students currently or previously enrolled in a course may not test out of that class. Students may attempt an exam for credit in an individual course only once. UCDEC credits are subject to transfer credit limitations.

To gain credit, a student must submit the UCDEC petition, signed by the cooperating instructor and the Center Director, and the registrar’s office at least 48 hours before the exam is scheduled to be given. A student must receive a minimum score of 70% to pass the exam and receive credit. A fee of $100 will be billed to the student’s account for the UCDEC.

Upon successful completion of the UCDEC, the student is awarded credit for the course. UCDEC credits are
granted on a Passing(P)/Unsatisfactory(U) basis only, and do not affect a student’s grade point average.

- **International Baccalaureate**
  Unity College accepts credits from the International Baccalaureate Diploma Programme for courses graded with a 5 or higher if applicable to the student’s major at Unity College.

International Baccalaureate credits are subject to transfer credit limitations.

**Attendance in Classes**
Students are expected to be on campus and attending classes on the first day of the semester. Students not in attendance on the first day are not excused from classes. Students are also expected to attend all classes scheduled for each course in which they are enrolled.

**Auditing a Course**
A regularly enrolled student may audit the lecture portion of any course with written permission from the instructor and one payment of a fee of $50 per credit, assessed separately from regular tuition fees.

Laboratories, studios, and outdoor skills courses are specifically excluded from audit. The course thus attended will be entered on the student’s transcript with the notation “Audit” No grade will be assigned.

The instructor’s sole responsibility will be to certify the student’s attendance. The student will be responsible for ensuring that the instructor is aware of his/her attendance at each class session. Taking examinations and turning in homework, papers, and other exercises to be graded are optional at the instructor’s discretion.

If the student later decides to obtain credit in the course audited, this can be done only by enrollment in and completion of the full requirements of the course, not via the Unity College Designed Examination for Credit. Auditing is defined as follows: students may attend the lectures of the course and perform as much of the assigned course work as they wish.

**Unity College Associate Program**
Residents of the State of Maine may take any scheduled course offered by Unity College for a fee of $100, plus any fees associated with the course, on a space-available basis. They receive no college credit. This program is designed to be for personal enrichment. Unity College Associate students are limited to one course per semester and may not participate in laboratories of a course or attend field trips to off-campus sites. Unity College Associates are not permitted to sign up for travel courses. Instructors of courses are not obligated to grade papers, projects, or give feedback to these students on their work in the course.

**Completion Rate**
Federal regulations require the reporting of six year cohort completion rates for all students. The completion rate for full-time, first-time bachelor’s degree-seeking undergraduate students who entered Unity College in the fall of 2006 was 38 percent as of August 31, 2012.

Federal reporting does not include students who transfer into Unity College as part of federal completion rates. The completion rates below are for all students who entered Unity College in the Fall of 2006. This will include first time freshman as well as transfer students.

- Graduated in 4 years: 39%
- Graduated in 6 years: 42%

**Courses of Instruction and Levels**
Courses numbered in the 1000s are introductory. Courses numbered in the 2000s are intended for students who are sophomores or above. Courses numbered in the 3000s are intended for juniors and seniors, and courses numbered in the 4000s are generally intended for students specializing in a given academic area. The prerequisites listed for each course will give students further guidance as to when you should take that course in your academic program.
Lower-division courses (1000 and 2000 level) generally focus on foundational theories, concepts, perspectives, principles, methods, and procedures of critical thinking in order to provide a broad basis for more advanced courses. The primary intent of lower-division coursework is to equip students with the general education needed for advanced study, to expose students to the breadth of different fields of study, and to provide a foundation for specialized upper-division coursework. Such courses have one or more of the following purposes:

- To acquaint students with the breadth of (inter)disciplinary fields in the arts, humanities, social sciences, life sciences and physical sciences, and to the historical and contemporary assumptions and practices of professional fields.
- To introduce essential skills of literacy (e.g., information gathering, reading, and writing), language, (e.g., oral communication and language and culture other than English), mathematics, and technology sciences to prepare for continuing work in any field of higher education.
- To lay the foundation for upper-division coursework and to begin development of analytical thinking and theoretical application.

Upper-division courses (3000 and 4000 level) are in-depth, specialized, advanced courses which emphasize problem-solving, analytical thinking skills, and theoretical applications. These courses often build on the foundation provided by the skills and knowledge of lower-division education. Upper-division courses may require the student to synthesize topics from a variety of sources. Upper-division courses may also require greater responsibility, or independence on the part of the student. Thus, many intermediate and all advanced baccalaureate courses in a field of study are properly located in the upper-division. In addition, disciplines that depend heavily on prerequisites or the body of knowledge of lower-division education may properly be comprised primarily of upper-division courses. Such courses have one or more of the following purposes:

- The in-depth study or application of theories and methods and the understanding of their scope and limitations.
- The refinement of essential skills and interpretation associated with the baccalaureate.
- The development of specific intellectual and professional skills designed to lead to post-baccalaureate employment, graduate study, or professional school.

Course Load
The maximum load in a semester is limited to 18 credit hours, with no more than three laboratory or workshop courses. All exceptions to a maximum load must be approved by the registrar.

Credit Hour
Unity College’s credit hour is a semester hour, the standard measure of progress toward a degree at most institutions. For most standard lecture courses, it represents 50 minutes of class time each week of the semester and two hours of out of class work. The class time, out of class work, and credits will vary, however, for other types of courses, such as laboratory sciences, studio arts, and field-oriented courses. For further information on course credit hours, please contact the registrar.

Diploma, Registering for
Application for Degree
There are two dates each year when degrees are conferred: the last week in December and in May. The deadline for submitting an Application for Degree or the Request to Participate in Graduation is September 15th for December graduation and February 15th for May graduation. Upon presentation of either application in the registrar’s office, students will be billed a $100 fee. Diplomas are not handed out at the commencement ceremony. Processing completion of degree requirements may take up to 30 days. Diplomas will be mailed once the academic records are certified and all financial obligations to the College have been resolved.

Participation in the Commencement Ceremony
Unity College celebrates Commencement with an official ceremony each May.

The following students are invited to participate in the ceremony:
• Students who have met all academic requirements and received their diploma at the end of the preceding fall semester.
• Students who will meet all graduation requirements set forth by Unity College at the conclusion of the spring semester.
• Students who are within six credits of meeting all of the graduation requirements set forth by Unity College.

There are two ways to request to participate in the May commencement ceremony (see below)

1. Students who will meet all graduation requirements set for by Unity College at the conclusion of the spring semester must:
   • Have a degree audit completed by the registrar’s office
   • Submit an Application for Degree by the February 15th deadline.
   • Will be billed a $100 fee

2. Students who are within six credits of meeting the graduation requirements and would like to request to participate in Commencement:
   • Must submit a Request to Participate form by the designated deadlines. September 15th for December graduation; February 15th for May graduation. Included with the request must be an academic plan to complete the remaining requirements. Before a decision for approval can be made, the Request to Participate form and academic plan must be submitted to the registrar’s office.
   • Will be billed a $100 fee.
   • May participate in a Commencement Ceremony only once. You may not participate again after completing all of your requirements.
   • Student’s name will appear in the Commencement program the year that they participate in Commencement only.
   • Students who have not completed all graduation requirements are not eligible to receive awards associated with commencement.
   • It will be the student’s responsibility to complete the outstanding degree requirements and submit proof of completion to the Unity College registrar’s office.
   • Students who plan to earn the outstanding requirements at an institution other than Unity College must have their coursework preapproved by the Unity College registrar’s office. It is the student’s responsibility to have official transcripts sent directly to the registrar’s office at the conclusion of the coursework to confirm the receipt of credits.
   • Once the completion of requirements has been verified, a diploma will be issued at the next available conferral opportunity (December or May). The diploma will be mailed to the student within six weeks of their conferral date.

Diploma, Replacement Copies
Graduates may request a replacement diploma if their original diploma has been lost or destroyed. Replacement diplomas shall carry all information contained on the original except that all signatories will be current administrators. Graduates requesting a replacement diploma will be subject to the current fee for such diplomas. Each replacement diploma will carry a “replacement” notation.

Diplomas, Unclaimed
Unclaimed, undeliverable or withheld diplomas are retained in the Registrar’s Office for a period of five years after which they may be destroyed. Graduates wishing to replace an unclaimed, destroyed diploma must purchase a replacement diploma as described above.
Directed Study
Under exceptional circumstances, you may pursue the subject matter of a regular course in the College course inventory during a semester (or at any time) when the course is not scheduled to meet. The contact hours and assignments should be comparable to those of the regularly scheduled class, unless other arrangements are approved by the Center Director. All directed studies must be approved by the appropriate Center Director.

Double Majors
Double majors or dual majors consist of two majors attached to a single degree, as opposed to two separate degrees each with its own field of study. Students may complete double majors, provided that at least 21 credit hours satisfy the requirements of one major and are separate and distinct from credit hours taken to satisfy the requirements of the other major. Both majors must be completed in the same semester. If the double majors are in a BA and a BS degree, then the student will choose which single degree is awarded.

Final Examination Period
Each semester includes three days scheduled for final exams. All final examinations must be given during the scheduled time during the examination period. Examination schedules are posted before the beginning of each semester on the college’s website. Students with three or more examinations on one day may petition the registrar to reschedule one examination.

Independent Study
Independent study and research is advanced work that allows students to go beyond existing course work to investigate a topic or hypothesis. The subject matter should be one that is not normally covered in regular course work. The work is supervised and evaluated by a faculty member and culminates in a significant paper or report. The independent study should be focused on a clearly defined subject matter of genuine intellectual and academic substance. Students interested in doing independent study are encouraged to discuss with faculty members their ideas and the feasibility of earning credit. Independent studies are variable credit from one (1) credit to three (3) credits.

Students wishing to pursue an independent study must have a cumulative grade point average of at least 3.00. Independent studies can only be done at the sophomore, junior or senior level with a full-time standing member of the Unity College faculty. Independent studies may not be used to meet requirements in a major and students may only do one independent study in a given semester. Independent studies may begin at any time, but must be on file in the Registrar’s Office one week before work is scheduled to begin. If an independent study is started after the add/drop period of a regular semester, or at other times of the year, tuition will be charged at the internship rate.

Medical Withdrawal from the College
Students may request a medical withdrawal when an illness or injury occurs that makes it impossible for the student to continue with classes. A medical withdrawal may be used in response to matter of both physical and mental health. To be recorded as a medical withdrawal, documentation from a licensed medical practitioner must be submitted to the Vice President of Student Affairs outlining the nature of the illness or injury and confirming that the student would not be able to complete course work as a result. Medical withdrawals will be dated according to the date that the college was notified of the intent to withdraw. As with official withdrawals, resident students are expected to leave campus as soon as possible after the withdrawal. The regular refund policies of the college apply. Medical withdrawals can be recorded up to the last day of class for the semester and are never retroactive (all documentation from a medical professional must be received before the last day of classes for the withdrawal to be considered medical). In the case of a medical withdrawal, all grades are recorded as “W” regardless of the time in the semester and all relevant offices and professors will be notified.

A student may also be required to take a medical withdrawal at the request of the College when a student’s illness or associated behaviors present a risk to the safety of the student or others or are significantly disruptive to the community. The Vice President of Student Affairs in consultation with medical professionals will make the determination of when a mandatory medical withdrawal will be required and by what date the student must leave campus.

Students who have taken a medical withdrawal are eligible to apply for re-activation and must do so through the
Registrar’s Office. Students are strongly encouraged to take a full semester away from the college to address the medical issues before seeking to return. Depending on the situation and the time in the semester that the withdrawal takes place this may be a required condition of the withdrawal/readmission. Students who leave on a medical withdrawal will be asked to submit confirmation that they have addressed the medical condition and are ready to return to full participation in the educational program of the college. This may require documentation from a licensed medical practitioner.

Students on a medical withdrawal will receive an email address on our alumni server while they are away from the college. Notification of this change will come from the Information Technology office.

Minors
An academic minor is a specified sequence of courses totaling 18-24 credits and requiring at least nine credits of 3000 or 4000 level work. Twelve of the credits must be outside of your major degree requirements and other minor requirements. Students are limited to declaring one minor in addition to their major(s). Minors do not lead to a degree. No substitution or waiver of courses in a minor is allowed. The college does not guarantee courses for a minor.

Operative Catalog
Unity College views the catalog as the primary contract between the college and the student. Students must follow the graduation requirements from the catalog which was in effect at the time of their matriculation, or students may, at their option elect to fulfill the requirements in any subsequent catalog, provided they were enrolled at the time the catalog was published.

In either case, the catalog is to be considered in its entirety; students may not fulfill part of their requirements from one catalog and another part from another catalog. Unity College reserves the right to change any of the statements made in the catalog by reasonable notice in a supplement or replacement publication.

Readmission
Students who previously attended Unity College and officially withdrew in good standing may be readmitted by applying to the registrar. Students who were dismissed or who did not enroll in classes the previous semester must also apply to the registrar. The deadlines for applying for re-admission are October 15th for spring semester and April 1st for fall semester.

Second Degree Requirements
Students desiring a second degree in addition to either their B.A. or a B.S. must complete a second residency requirement of 45 credit hours, all taken after the completion of the first bachelor’s degree.

Special Students
A special student is one who is not pursuing a degree at Unity College but wish to take courses for undergraduate credit. Any person with a high school diploma or a graduate equivalency diploma may apply directly to the registrar to take courses as a special student. Special students are limited to one course per semester up to a maximum of 15 credits on a space available basis. Special students who wish to matriculate must follow normal application procedures through the Unity College Admissions Office. Credits earned by a special student may be applied toward a Unity degree program. The deadline for applying as a special student, are July 1 for fall semester and December 1 for spring semester. Space available will be determined on August 01 for fall semester and December 31 for spring semester.

Status/Full-Time and Part-Time
A full-time student is matriculated into a degree program and carries a minimum of 12 credit hours in a semester.

A part-time student is matriculated into a degree program, but carries fewer than 12 credit hours in a semester. Students are billed as full-time students for 12 to 16 credit hours, and financial aid is awarded on the basis of at least 6 credit hours of enrollment.
Time Limit
Students enrolled in a degree program may continue to work toward their degree program under the requirements which were in effect at the time they matriculated, providing there have been no breaks of more than 24 months. Students who have a break of more than 24 months must then meet requirements of the catalog in effect at the time they reenter the college. The college reserves the right to make substitutions for courses which are no longer offered.

Transfer Credits
Transfer Credits may be awarded for up to a maximum of 90 credit hours in a bachelor’s program (30 in an associate degree) for work successfully completed with a grade of C or better at accredited institutions of higher learning. Courses counting as electives may not exceed 40 credits. Courses offered for transfer should be comparable to courses at Unity, but other courses will be considered if appropriate to the applicant’s program of study. Incoming transfer students should refer to individual course descriptions to determine when those courses scheduled on an alternate year basis will be offered. All final official college transcripts must be part of the student’s academic file prior to August 1st for students enrolling in the fall semester and the first day of classes for students entering in the spring semester. If final transcripts are not received before the designated times, the initial transfer evaluation will be revised and credit will not be awarded.

Veteran Students
Unity College welcomes applications from veterans as well as from active duty military personnel, reservists, the National Guard, widows and widowers of veterans, and war orphans. A student wishing to be considered for educational benefits from the Veterans Administration must submit copies of discharge papers (DD-214) and, if applicable, marriage licenses and birth certificates of dependents, along with the appropriate applications to the registrar’s office. Official transcripts of any previous training must also be submitted to the veteran’s office. Dependents of deceased or service-connected disabled veterans must contact the veteran’s center that holds the veteran’s records, and inform the center of their intention to attend Unity College.

The degree programs of Unity College are approved by the Maine State Approving Agency for Veterans Education Programs for persons eligible for educational benefits (GI Bill) from the U.S. Department of Veteran Affairs. Students who have questions about their eligibility should visit the Veterans Administration web site at www.gibill.va.gov or call 888.442.4551. Students who request veteran’s educational assistance are required to have all previous post-secondary experience evaluated for possible transfer credit in order to be eligible for benefits. For more information, contact the Unity College registrar.

Veteran students are expected to complete all of their registered courses each semester. Any change in academic workload must be reported to the registrar. Failure to do so may result in an overpayment.

Withdrawal from the College
Students are considered officially withdrawn when they complete the withdrawal process designated by the registrar. Grades of “W” will be recorded if the process is finished before final examinations begin. Students who fail to complete the process are liable for academic penalty, which may include a failing grade.

Students who leave the college without officially withdrawing are considered enrolled students and their grades will be recorded.

Refunds are based on the published refund schedule and determined by date of withdrawal.

Statement of Academic Freedom
Academic freedom is essential to the fulfillment of the educational purposes of the college. Encouragement of an atmosphere of confidence and freedom is balanced by an expectation of responsible judgment as it relates to respect for the individual and for the institution. Further, there is an obligation when expressing personal opinion to indicate it is not necessarily representative of the institution’s position. There shall be freedom from any censorship, threat, restraint, or discipline by the college with regard to the pursuit of truth in the performance of teaching, research, publishing, or public service. This position is in keeping with the Statement of Academic Freedom and Tenure as published in 1940 and revised in 1990 by the American Association of University Professors (AAUP).
The Unity College Honor Code

Every member of the Unity College community is responsible for upholding the principles of academic honesty. Personal ethics and academic community integrity should govern student action.

Academic Integrity

The Unity College Honor Code requires that students be honest in all academic work. By joining the Unity College Community, students express their willingness to accept the responsibilities and privileges of the academic community. Furthermore, students understand that their name on any assignment written or otherwise shall be regarded as assurance that the work is the result of their own thought and study, except where quotation marks, references, footnotes, or other means of attribution acknowledge the use of other sources. Acknowledgment of collaboration shall be made in the work submitted. In examinations, students shall respond entirely on the basis of their own capacity without any assistance, except that authorized by the instructor.

The Honor Board administers the Honor Code. Appointed annually, it consists of two full-time faculty members selected by the faculty, two students appointed by the Student Government, and a member of the college community appointed by the Provost. Cases of dishonesty in academic matters are referred to the Honor Board, which exists to:

- Investigate alleged violations of the Honor Code
- Arbitrate all instances of student academic dishonesty not settled to the student’s or the faculty member’s satisfaction
- Determine if the Honor Code has been violated and to specify consequences
- Maintain a record of alleged infractions and subsequent findings

Students should conduct their academic activities so as to be above suspicion at all times. They should inform suspected violators of their awareness or discuss alleged incidents with an Honor Board member. If a student feels that he or she has been treated unfairly by a faculty member regarding academic integrity, that student may bring the matter to the Honor Board for resolution.

Faculty members will assume that students are adhering to the Honor Code and will conduct their classes and examinations accordingly. If a faculty member suspects a violation of the Honor Code, he or she shall first discuss the matter with the student(s). If the matter is not resolved to the satisfaction of both parties, either may call the facts to the Honor Board’s attention.

Similarly, if the proceedings of the Honor Board are unsatisfactory, either party may appeal to the proper administrative channels.

Academic dishonesty includes, but is not limited to, the following:

Plagiarism
- Quoting, summarizing, or paraphrasing any part or all of a source without acknowledging the source in the text of any written work;
- Incorporating any information—data, statistics, examples, etc. — that is not common knowledge without attributing the source of that information;
- Using another person’s opinions, reasonings, or arguments;
- Putting your name on an assignment someone else completed or submitting an assignment for one class in another class without approval of both instructors

Cheating
- Claiming credit for work not done independently (excluding college support services such as the LRC) without giving credit for aid received
- Accepting any unauthorized aid or communication during examinations
- Falsifying or deliberately misrepresenting data and/or submission of work.
• Submitting an assignment for one class in another class without approval.

Any student found guilty of violating the Unity College Honor Code may be suspended or dismissed from the college.

**Nondiscrimination/Harassment/Equal Opportunity Policy**

Unity College values a diverse college community where all individuals are treated with respect and dignity. The college is committed to providing a learning and working environment that is free of illegal discrimination, harassment or retaliation. Illegal discrimination, harassment, or retaliation of individuals of the campus community are against our policy and will not be tolerated.

Unity College does not discriminate on the basis of race, color, ancestry or national origin, religion, sex, sexual orientation, marital status, age, disability, veteran status, or other status protected under local, state or federal laws in the recruitment and admission of students, educational policies and procedures, and in the recruitment and employment of employees. We offer reasonable accommodation to applicants and to qualified individuals with disabilities, including accommodation in the application process.

Unity College is an equal opportunity employer and operates in accordance with federal and state laws regarding non-discrimination.

Harassment is verbal or physical conduct that denigrates or shows hostility or aversion toward an individual that may involve any of the protected categories listed. Harassment on the basis of these protected characteristics is against the law and the policy of the college. Examples of prohibited harassing conduct include but is not limited to; epithets, slurs, or negative stereotyping; threatening, intimidating, or hostile acts; denigrating jokes; written or graphic material that denigrates or shows hostility or aversion toward an individual or group; sexually-oriented conversation; or visual display of sexually suggestive pictures or objects.

These policies apply to all students and employees and are related to conduct engaged by fellow employees, students, or third parties with whom students and employees interact with in the course of their learning or jobs. Those that experience or witness discrimination, harassment or retaliation are encouraged to promptly report to the Vice President for Student Affairs (students) or the Director of Human Resources (employees), who will investigate complaints. The type of discipline will be determined by reflecting on the severity of the conduct, up to and including a suspension or termination from school or dismissal from the college.
The Family Educational Rights and Privacy Act of 1974 (and Amendments)

Annual Notice of Student Education Records and Information Rights

The Family Educational Rights and Privacy Act (FERPA) afford students certain rights with respect to their educational records. These rights include:

**Inspection of Records**
A student has the right to inspect and review his or her education records within 45 days of the day the College receives a request for access. A student should submit to the registrar a written request that identifies the record(s) the student wishes to inspect. The registrar will make arrangements for access and notify the student of the time and place where the records may be inspected in the presence of a campus official.

**Amendment of Records**
A student has the right to request the amendment of his or her education records that the student believes are inaccurate, misleading, or otherwise in violation of the student’s privacy rights under FERPA.

A student who wishes to ask the College to amend a record should write the registrar, clearly identify the part of the record the student wants changed, and specify why it is inaccurate or misleading.

If the College decides not to amend the record as requested, the College will notify the student in writing of the decision and the student’s right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to the student when notified of the right to a hearing.

**Disclosure of Records**
Unity College must obtain a student’s written consent prior to disclosure of personally identifiable information contained in education records except in circumstances permitted by law or regulations, some of which are summarized below.

**Directory Information**
Unity College designates the following student information as directory information that may be made public at its discretion: name, address, telephone listing, e-mail address, photograph, date and place of birth, major field of study, grade level, enrollment status, most recent educational agency or institution attended, and student ID number or other identifier other than a Social Security number (but only if the identifiers cannot be used to gain access directly to education records without one or more other factors such as a password), participation and grade level of students in officially recognized activities and sports, height and weight of student athletes, dates of attendance in the college, degrees, honors and awards received, and photographs and videos relating to student participation in campus activities open to the public.

Students who do not want the college to disclose directory information must notify the Registrar’s Office in writing by September 15th or within thirty (30) days of enrollment, whichever is later. This opt-out request will remain in effect unless and until it is rescinded.

**School Officials with Legitimate Educational Interests**
Education records may be disclosed to school officials with a legitimate educational interest. A school official has a legitimate educational interest if he/she needs to review an education record in order to fulfill his/her professional responsibility. School officials include persons employed by the college as an administrator, supervisor, academic or research faculty or staff, or support staff member (including health or medical staff and law enforcement unit personnel); persons or companies with whom the college has contracted to provide specific services (such as attorneys, auditors, medical consultants, field placement supervisors and other related personnel, collection agencies, evaluators or therapists); Board of Trustee members; students serving on official committees or assisting other school officials in performing their tasks; and volunteers who are under the direct control of the college with regard to education records.
Health or Safety Emergencies
In accordance with federal regulations, the college may disclose education records in a health or safety emergency to any person whose knowledge of the information is necessary to protect the health or safety of the student or other individuals without prior written consent.

Other Institutions of Higher Education
Unity College sends student education records to other institutions to which a student seeks or intends to enroll, or is actually enrolled including disciplinary records, attendance records, disability records and health records that pertain to the student’s enrollment at Unity College.

Other Entities/Individuals
Education records may be disclosed to other entities and individuals as specifically permitted by law. Students may obtain information about other exceptions to the written consent requirement by request to the Registrar’s Office.

Complaints Regarding Unity College’s Compliance with FERPA
Students who believe that the College has not complied with the requirements of FERPA have the right to file a complaint with the U.S. Department of Education. The office that administers FERPA is:

Family Policy Compliance Office
U.S. Department of Education
400 Maryland Avenue
SW Washington, DC 20202

Payment Due Dates

ALL CHARGES FOR FALL SEMESTER ARE DUE IN FULL ON OR BEFORE JULY 15 FOR ALL INCOMING STUDENTS AND AUGUST 1 FOR RETURNING STUDENTS AND DECEMBER 15 FOR ALL STUDENTS FOR THE SPRING SEMESTER.

Bills are based on a full-time course load in the chosen program of study and are sent to first-time students in early April, returning students in early June for the fall semester and mid-November for the spring semester. A 1.5 percent per month late charge may accrue on all unpaid balances.

Payments can be made online at www.unity.edu/payments or you may mail a check to:

Unity College
Office of Student Accounts
90 Quaker Hill Road
Unity, Maine 04988

Unity College Monthly Payment Plans

Unity College offers a 12-month and a 10-month Payment Plan to students with accounts in good standing. Unity College defines accounts in good standing to be accounts which are paid in full in a timely fashion for prior semesters. Under these plans all amounts due to Unity College can be paid over a 12-month or 10-month period commencing on May 25th or June 25th. A non-refundable $75 application fee will be charged to participate in either plan. In order to participate, students must complete an online application form.

Payments can be made online at www.unity.edu/payments or you may mail a check to the address noted above. You may also submit payment by signing up for our direct debit option which is located on the online application form. All subsequent payments are due on the 25th of the month. Late payments are subject to a 1.5 percent per month late charge on the unpaid balance.

Failure to Pay

Failure to pay bills in full when due may result in the revoking of Unity College privileges, including but not limited to, issuance of grades and/or transcripts, registration for subsequent semesters, participation in graduation ceremonies, and participation in registered classes and examinations. It is imperative that a student contact the Student Accounts Office if any of the charges are disputed at 207-948-9261.

### Refund Add/Drop Policy

#### Tuition and Fees
Courses may be added or dropped during the add/drop period without additional costs if credit hours fall between 12-16 credit hours. Students taking more than 16 credits are charged an additional fee per credit hour. Students taking fewer than 12 credit hours are charged for credit hours taken.

Housing and Meal Plans are billed on a semester basis; the student is financially responsible for a full academic year in accordance with the terms of the housing and meal plan contract.

A prorated per diem refund will be allowed for the following reasons only:

- Academic Dismissal
- Illness or Injury requiring withdrawal from college.

Students receiving any federally sponsored financial aid, such as Federal Pell Grants, or Federal Stafford Loans, are subject to a separate Federal policy pertaining to the amount of those federal funds they may retain when they withdraw from the college during an academic semester. This policy called, The Return of Title IV Funds Policy, prorates available aid based on the amount of the semester completed. Written examples of the refund calculations are available upon request from the financial aid office, as well as any further information that may be needed pertaining to the refund or return of Title IV Funds process.

Whenever applicable refunds are determined and any federally sponsored programs are involved, the following federally prescribed order of refund distribution is required.

**Financial Aid**

Many students and their parents assume that attending a private college will cost too much or that their income is too high for them to qualify for financial aid. Often these assumptions are not correct. Financing a college education is not easy. It involves a significant commitment on the part of students and parents, but in most instances financial aid will make it possible for a student to attend a private college often at a cost similar to costs at state colleges or universities. In any case, you will never know whether you can afford to attend Unity College unless you apply for admission and financial aid.

Unity College will continue to do everything possible to make it financially possible for qualified students to attend. Approximately ninety percent of Unity students receive financial assistance.

**UNITY COLLEGE FINANCIAL AID**

**SATISFACTORY ACADEMIC PROGRESS STANDARDS**

All students receiving Federal Title IV and Unity College financial aid funds must meet the Satisfactory Academic Progress (SAP) standards outlined below. A student whose academic progress does not meet the standards will be notified of the deficiency and placed on financial aid warning, or financial aid denial, and if upon successful appeal of financial aid denial, a semester of financial aid probation.

**Academic Requirements**

Students must meet ALL of the following requirements before being considered for financial aid or reinstatement of financial aid:

- 3-4 calendar days: 75%
- 5 calendar days: 50%
- More than 5 calendar days: 0%
o Be enrolled in and attending an eligible program for the purpose of completing a BA/BS/AS/AA degree.
o Receive credit for at least 67% of Total Attempted Credits.
(Total Attempted Credits is defined as the total number of credits a student is enrolled in at the end of the Add/Drop period of each semester, and cumulatively includes all accepted transfer credits)
o Maintain the minimum cumulative Grade Point Average (GPA) requirement as follows:

<table>
<thead>
<tr>
<th>Credits earned (Including transfer credits transferred)</th>
<th>Minimum Cumulative grade point average required (CGPA)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1-23</td>
<td>1.70</td>
</tr>
<tr>
<td>24-47</td>
<td>1.80</td>
</tr>
<tr>
<td>48 &amp; above</td>
<td>2.0</td>
</tr>
</tbody>
</table>

All transfer credits accepted by Unity College towards a student’s program count towards total cumulative credits. However these credits will not be counted towards cumulative GPA.

All previous periods of enrollment will be used in determining Satisfactory Academic Progress, regardless of whether or not financial aid was received.

You must have at least a 2.00 cumulative grade point average after four semesters of study, regardless of your enrollment status.

Your progress is reviewed after the end of each semester or other period of study such as a Summer session, May session or Internship.

If you have not met the required quantitative and/or qualitative standards you may be provided a warning period. A warning period may be provided to a student who has not met, but is very close to the required standards and we anticipate that she or he will meet the progress standards required at the conclusion of the next semester. If you are granted a warning period, you will receive a letter from our office.

If we determine that you are not eligible for aid based on your progress, and are placed on financial aid denial, you may appeal our decision. If your appeal is successful you will be granted one semester of probation. The appeal process follows federal rules and you will be asked to:

o explain and document the mitigating circumstances (e.g., major illness, death in the family, or other special circumstance) that prevented you from meeting the required standards;
o explain what has changed or will change for you so that you will be able to earn the required cumulative grade point average and meet the 67% credits earned threshold by the end of your probationary semester; and
o detail how your degree will be earned within a maximum time frame of 150%, which is equivalent to 12 semesters if you are attending on a full-time basis, or 180 credits (including transfer credits). Please note that most financial aid programs are not available for this length of time.
Appeals of financial aid denial are submitted to the Director of Financial Aid in writing, within 15 days of the notice of financial aid denial.

During a semester of warning or probation you are eligible to receive aid. At the end of your semester of warning or probation you must have met the cumulative grade point average and credits achieved standards above to be eligible for financial aid for subsequent semesters.

Students appealing financial aid denial who expect to need more than one semester to reach the required standards, will be required to meet with the Registrar’s office to develop an academic plan that will ensure that the student is able to meet the academic progress standards by a specific point in time, and would include reaching certain progress levels at the end of specific semesters and/or payment periods.

Students who are not eligible for financial aid based on being placed on financial aid denial, may regain eligibility for financial aid again once they have met the cumulative grade point average and credits achieved standards above.

NOTES:

All attempted credits, including transfer credits, are included in our quantitative calculations of degree progression of achieved versus attempted credits. In the calculation of qualitative cumulative grade point average, courses with a “W”, or “I” assigned are excluded in that calculation.

In circumstances where a student declares a change in degree major, the student’s credits achieved will be assessed to determine the total credits already earned that may be applied to the new degree requirements. Those credits will be compared to the attempted credit maximum to determine the allowable remaining attempted credits and this standard will be applied to all remaining payment periods in which the student is enrolled.

REVISED 12/2011 – EFFECTIVE BEGINNING WITH TERM 1 2011-2012 GRADE REVIEW
Resources on Campus

Detailed information may be obtained from the resources below. For information in categories other than these, contact the Admissions Office (ext. 451)
