This expedition will explore what it means to have a “sustainable diet,” considering many aspects of local, regional, and global food systems from food production, to the processing and distribution of foods, through to food consumption and waste. Students will take part in a 3-day tour of northern New England to visit a variety of businesses and groups working to increase the sustainability of local and regional food systems.

This expedition will explore what it means to be in harmony with nature, taking us to various locations around Maine to experience “sustainable living.” Students will travel to western Maine to work with a school program to help deliver programming as they explore their relationship and responsibility to the natural world.

This expedition is designed to help us understand and answer the key questions associated with wildlife trafficking. Students will travel throughout Maine to focus on illegal fishing and the persistent problem of eel poaching.

Throughout this experience, we will be exploring natural disasters from the perspectives of the natural sciences, creative arts, social sciences, and humanities. Students will travel to New Orleans for an immersive experience into the events, aftermath, and social, psychological, and physical repercussions of Hurricane Katrina.
